

# tagpdf – A package to experiment with pdf tagging<sup>\*</sup>

Ulrike Fischer<sup>†</sup>

Released 2024-04-12

## Contents

<b>1</b>	<b>Initialization and test if pdfmanagement is active.</b>	<b>7</b>
<b>2</b>	<b>base package</b>	<b>7</b>
<b>3</b>	<b>Package options</b>	<b>8</b>
<b>4</b>	<b>Packages</b>	<b>8</b>
4.1	Indexed objects . . . . .	8
4.2	a LastPage label . . . . .	9
<b>5</b>	<b>Variables</b>	<b>9</b>
<b>6</b>	<b>Variants of l3 commands</b>	<b>11</b>
<b>7</b>	<b>Label and Reference commands</b>	<b>11</b>
<b>8</b>	<b>Setup label attributes</b>	<b>12</b>
<b>9</b>	<b>Commands to fill seq and prop</b>	<b>12</b>
<b>10</b>	<b>General tagging commands</b>	<b>13</b>
<b>11</b>	<b>Keys for tagpdfsetup</b>	<b>14</b>
<b>12</b>	<b>loading of engine/more dependent code</b>	<b>16</b>
<b>I</b>	<b>The tagpdf-checks module</b>	
	<b>Messages and check code</b>	
	<b>Part of the tagpdf package</b>	<b>17</b>
<b>1</b>	<b>Commands</b>	<b>17</b>

---

<sup>\*</sup>This file describes v0.99b, last revised 2024-04-12.

<sup>†</sup>E-mail: [fischer@troubleshooting-tex.de](mailto:fischer@troubleshooting-tex.de)

<b>2</b>	<b>Description of log messages</b>	<b>17</b>
2.1	\ShowTagging command . . . . .	17
2.2	Messages in checks and commands . . . . .	18
2.3	Messages from the ptagging code . . . . .	18
2.4	Warning messages from the lua-code . . . . .	18
2.5	Info messages from the lua-code . . . . .	18
2.6	Debug mode messages and code . . . . .	19
2.7	Messages . . . . .	19
<b>3</b>	<b>Messages</b>	<b>21</b>
3.1	Messages related to mc-chunks . . . . .	21
3.2	Messages related to structures . . . . .	22
3.3	Attributes . . . . .	24
3.4	Roles . . . . .	24
3.5	Miscellaneous . . . . .	24
<b>4</b>	<b>Retrieving data</b>	<b>25</b>
<b>5</b>	<b>User conditionals</b>	<b>25</b>
<b>6</b>	<b>Internal checks</b>	<b>26</b>
6.1	checks for active tagging . . . . .	26
6.2	Checks related to structures . . . . .	27
6.3	Checks related to roles . . . . .	28
6.4	Check related to mc-chunks . . . . .	29
6.5	Checks related to the state of MC on a page or in a split stream . . . . .	31
6.6	Benchmarks . . . . .	34
<b>II</b>	<b>The tagpdf-user module</b>	
<b>Code related to L<sup>A</sup>T<sub>E</sub>X2e user commands and document commands</b>		
<b>Part of the tagpdf package</b>		<b>36</b>
<b>1</b>	<b>Setup commands</b>	<b>36</b>
<b>2</b>	<b>Commands related to mc-chunks</b>	<b>36</b>
<b>3</b>	<b>Commands related to structures</b>	<b>37</b>
<b>4</b>	<b>Debugging</b>	<b>37</b>
<b>5</b>	<b>Extension commands</b>	<b>38</b>
5.1	Fake space . . . . .	38
5.2	Tagging of paragraphs . . . . .	38
5.3	Header and footer . . . . .	39
5.4	Link tagging . . . . .	39
<b>6</b>	<b>Socket support</b>	<b>39</b>
<b>7</b>	<b>User commands and extensions of document commands</b>	<b>40</b>

<b>8</b>	<b>Setup and preamble commands</b>	<b>40</b>
<b>9</b>	<b>Commands for the mc-chunks</b>	<b>40</b>
<b>10</b>	<b>Commands for the structure</b>	<b>41</b>
<b>11</b>	<b>Socket support</b>	<b>42</b>
<b>12</b>	<b>Debugging</b>	<b>42</b>
<b>13</b>	<b>Commands to extend document commands</b>	<b>46</b>
13.1	Document structure . . . . .	46
13.2	Structure destinations . . . . .	47
13.3	Fake space . . . . .	47
13.4	Paratagging . . . . .	47
13.5	Language support . . . . .	55
13.6	Header and footer . . . . .	55
13.7	Links . . . . .	57
<b>III The tagpdf-tree module</b>		
<b>Commands trees and main dictionaries</b>		
<b>Part of the tagpdf package</b>		<b>59</b>
<b>1</b>	<b>Trees, pdfmanagement and finalization code</b>	<b>59</b>
1.1	Check structure . . . . .	59
1.2	Catalog: MarkInfo and StructTreeRoot and OpenAction . . . . .	60
1.3	Writing the IDtree . . . . .	61
1.4	Writing structure elements . . . . .	62
1.5	ParentTree . . . . .	63
1.6	Rolemap dictionary . . . . .	66
1.7	Classmap dictionary . . . . .	66
1.8	Namespaces . . . . .	67
1.9	Finishing the structure . . . . .	68
1.10	StructParents entry for Page . . . . .	69
<b>IV The tagpdf-mc-shared module</b>		
<b>Code related to Marked Content (mc-chunks), code shared by all modes</b>		
<b>Part of the tagpdf package</b>		<b>70</b>
<b>1</b>	<b>Public Commands</b>	<b>70</b>
<b>2</b>	<b>Public keys</b>	<b>71</b>
<b>3</b>	<b>Marked content code – shared</b>	<b>72</b>
3.1	Variables and counters . . . . .	72
3.2	Functions . . . . .	73
3.3	Keys . . . . .	76

<b>V The tagpdf-mc-generic module</b>	
Code related to Marked Content (mc-chunks), generic mode	
Part of the tagpdf package	77
1 Marked content code – generic mode	77
1.1 Variables . . . . .	77
1.2 Functions . . . . .	78
1.3 Looking at MC marks in boxes . . . . .	81
1.4 Keys . . . . .	89
<b>VI The tagpdf-mc-luacode module</b>	
Code related to Marked Content (mc-chunks), luamode-specific	
Part of the tagpdf package	91
1 Marked content code – luamode code	91
1.1 Commands . . . . .	93
1.2 Key definitions . . . . .	97
<b>VII The tagpdf-struct module</b>	
Commands to create the structure	
Part of the tagpdf package	100
1 Public Commands	100
2 Public keys	101
2.1 Keys for the structure commands . . . . .	101
2.2 Setup keys . . . . .	103
3 Variables	103
3.1 Variables used by the keys . . . . .	105
3.2 Variables used by tagging code of basic elements . . . . .	106
4 Commands	106
4.1 Initialization of the StructTreeRoot . . . . .	107
4.2 Adding the /ID key . . . . .	108
4.3 Filling in the tag info . . . . .	109
4.4 Handlings kids . . . . .	110
4.5 Output of the object . . . . .	113
5 Keys	117
6 User commands	122
7 Attributes and attribute classes	131
7.1 Variables . . . . .	131
7.2 Commands and keys . . . . .	131

<b>VIII The tagpdf-luatex.def</b>	
<b>Driver for luatex</b>	
<b>Part of the tagpdf package</b>	<b>135</b>
1 Loading the lua	135
2 Logging functions	139
3 Helper functions	141
3.1 Retrieve data functions . . . . .	141
3.2 Functions to insert the pdf literals . . . . .	143
4 Function for the real space chars	146
5 Function for the tagging	149
6 Parenttree	154
<b>IX The tagpdf-roles module</b>	
<b>Tags, roles and namespace code</b>	
<b>Part of the tagpdf package</b>	<b>156</b>
1 Code related to roles and structure names	156
1.1 Variables . . . . .	157
1.2 Namespaces . . . . .	159
1.3 Adding a new tag . . . . .	160
1.3.1 pdf 1.7 and earlier . . . . .	161
1.3.2 The pdf 2.0 version . . . . .	163
1.4 Helper command to read the data from files . . . . .	165
1.5 Reading the default data . . . . .	167
1.6 Parent-child rules . . . . .	167
1.6.1 Reading in the csv-files . . . . .	168
1.6.2 Retrieving the parent-child rule . . . . .	170
1.7 Remapping of tags . . . . .	175
1.8 Key-val user interface . . . . .	175
<b>X The tagpdf-space module</b>	
<b>Code related to real space chars</b>	
<b>Part of the tagpdf package</b>	<b>177</b>
1 Code for interword spaces	177
<b>Index</b>	<b>181</b>

---

`\tag_stop:` We need commands to stop tagging in some places. They switches three local booleans  
`\tag_start:` and also stop the counting of paragraphs. If they are nested an inner `\tag_start:` will  
`\tagstop` not restart tagging.  
`\tagstart`

---

`\tag_stop:n \tag_stop:n{<label>}`  
`\tag_start:n \tag_start:n{<label>}`

The commands with argument allow to give a label. This is only used in debugging messages to allow to follow the nesting.

---

`activate/spaces`(setup-key)

`activate/spaces` activates the additional parsing needed for interword spaces. It replaces the deprecated key `interwordspace`.

---

`activate/mc`(setup-key)  
`activate/tree`(setup-key)  
`activate/struct`(setup-key)  
`activate/all`(setup-key)  
`activate-mc`(deprecated)  
`activate-tree`(deprecated)  
`activate-struct`(deprecated)  
`activate-all`(deprecated)

---

Keys to activate the various tagging steps.

---

`activate/struct-dest`(setup-key)  
`no-struct-dest`(deprecated)

---

The key allows to suppress the creation of structure destinations

---

`debug/log`(setup-key) The `debug/log` key takes currently the values `none`, `v`, `vv`, `vvv`, `all`. More details are in `tagpdf-checks`.

---

`activate/tagunmarked`(setup-key)  
`tagunmarked`(deprecated)

---

This key allows to set if (in luamode) unmarked text should be marked up as artifact. The initial value is true.

---

`page/tabsorder`(setup-key) This sets the tabsorder on a page. The values are `row`, `column`, `structure` (default)  
`tabsorder`(deprecated) or `none`. Currently this is set more or less globally. More finer control can be added if needed.

---

`tagstruct`  
`tagstructobj`  
`tagabspage`  
`tagmcabs`  
`tagmcid`

---

# 1 Initialization and test if pdfmanagement is active.

```
1 <@@=tag>
2 <*package>
3 \ProvidesExplPackage {tagpdf} {2024-04-12} {0.99b}
4   { A package to experiment with pdf tagging }
5
6 \bool_if:nF
7   {
8     \bool_lazy_and_p:nn
9       {\cs_if_exist_p:N \pdfmanagement_if_active_p:}
10      { \pdfmanagement_if_active_p: }
11    }
12  { %error for now, perhaps warning later.
13    \PackageError{tagpdf}
14    {
15      PDF~resource~management~is~no~active!\MessageBreak
16      tagpdf~will~no~work.
17    }
18  {
19    Activate~it~with \MessageBreak
20    \string\RequirePackage{pdfmanagement-testphase}\MessageBreak
21    \string\DocumentMetadata{<options>}\MessageBreak
22    before~\string\documentclass
23  }
24 }
25 </package>
<*debug>
26 \ProvidesExplPackage {tagpdf-debug} {2024-04-12} {0.99b}
27   { debug code for tagpdf }
28 \@ifpackageloaded{tagpdf}{}{\PackageWarning{tagpdf-debug}{tagpdf~not~loaded,~quitting}\endinput}
</debug> We map the internal module name “tag” to “tagpdf” in messages.
29 <*package>
30 \prop_gput:Nnn \g_msg_module_name_prop { tag }{ tagpdf }
31 </package>
Debug mode has its special mapping:
32 <*debug>
33 \prop_gput:Nnn \g_msg_module_type_prop { tag / debug } {}
34 \prop_gput:Nnn \g_msg_module_name_prop { tag / debug }{tagpdf-DEBUG}
35 </debug>
```

# 2 base package

To avoid to have to test everywhere if tagpdf has been loaded and is active, we define a base package with dummy functions

```
36 <*base>
37 \ProvidesExplPackage {tagpdf-base} {2024-04-12} {0.99b}
38   {part of tagpdf - provide base, no-op versions of the user commands }
39 </base>
```

### 3 Package options

There are only two documented options to switch for luatex between generic and luamode, TODO try to get rid of them. The option `disabledelayedshipout` is only temporary to be able to debug problem with the new shipout keyword if needed.

```
40 {*package}
41 \bool_new:N\g__tag_mode_lua_bool
42 \bool_new:N\g__tag_delayed_shipout_bool
43 \bool_lazy_and:nnT
44 { \bool_if_exist_p:N \l__pdfmanagement_delayed_shipout_bool }
45 { \l__pdfmanagement_delayed_shipout_bool }
46 {
47   \bool_gset_true:N\g__tag_delayed_shipout_bool
48 }
49 \DeclareOption{luamode} { \sys_if_engine_luatex:T { \bool_gset_true:N \g__tag_mode_lua_bool }
50 \DeclareOption{genericmode}{ \bool_gset_false:N\g__tag_mode_lua_bool }
51 \DeclareOption{disabledelayedshipout}{ \bool_gset_false:N\g__tag_delayed_shipout_bool }
52 \ExecuteOptions{luamode}
53 \ProcessOptions
```

### 4 Packages

To be on the safe side for now, load also the base definitions

```
54 \RequirePackage{tagpdf-base}
55 
```

The no-op version should behave a near enough to the real code as possible, so we define a command which a special in the relevant backends:

```
56 {*base}
57 \AddToHook{\begindocument}
58 {
59   \str_case:VnF \c_sys_backend_str
60   {
61     { luatex } { \cs_new_protected:Npn \__tag_whatsits: {} }
62     { dvisvgm } { \cs_new_protected:Npn \__tag_whatsits: {} }
63   }
64   {
65     \cs_new_protected:Npn \__tag_whatsits: {\tex_special:D {} }
66   }
67 }
68 
```

#### 4.1 Indexed objects

2024-04-11: Temporary code! Can be removed after the next expl3 release!

```
69 \cs_if_free:NT \pdf_object_new_indexed:nn
70 {
71   \cs_generate_variant:Nn \pdf_object_new:n {e}
72   \cs_generate_variant:Nn \pdf_object_write:nnn {enn}
73   \cs_new_protected:Npn \pdf_object_new_indexed:nn #1 #2
74   {
75     \pdf_object_new:e {#1/\int_eval:n{#2}}
```

```
76 }
77 \cs_new_protected:Npn \pdf_object_write_indexed:nnnn #1 #2 #3 #4
78 {
79     \pdf_object_write:enn {#1/\int_eval:n{#2}}{#3}{#4}
80 }
81 \cs_generate_variant:Nn \pdf_object_write_indexed:nnnn {nnne}
82 \cs_new:Npn \pdf_object_ref_indexed:nn #1 #2
83 {
84     \pdf_object_ref:e {#1/\int_eval:n{#2}}
85 }
86 \cs_new:Npn \__kernel_pdf_object_id_indexed:nn #1 #2
87 {
88     \int_use:c
89     { c__pdf_object_ #1/\int_eval:n{#2} _int }
90 }
91 }
```

## 4.2 a LastPage label

See also issue #2 in Accessible-xref

```

\_tag_lastpagelabel:
 93  {*package}
 94  \cs_new_protected:Npn \_tag_lastpagelabel:
 95  {
 96    \legacy_if:nT { @filesw }
 97    {
 98      \exp_args:NNne \exp_args:NN\iow_now:Nn \auxout
 99      {
100        \token_to_str:N \new@label@record
101        {@tag@LastPage}
102        {
103          {abspage} { \int_use:N \g_shipout_READONLY_int }
104          {tagmcabs}{ \int_use:N \c@g__tag_MCID_abs_int }
105          {tagstruct}{\int_use:N \c@g__tag_struct_abs_int }
106        }
107      }
108    }
109  }
110
111  \AddToHook{enddocument/afterlastpage}
112  {\_tag_lastpagelabel:}

(End of definition for \ _tag lastpagelabel:.)

```

## 5 Variables

```

\l__tag_tmpa_tl      A few temporary variables
\l__tag_tmpb_tl
\l__tag_get_tmpc_tl
\l__tag_get_parent_tmpa_tl \l__tag_tma_str
\l__tag_tma_prop
\l__tag_tma_seq
\l__tag_tmpb_seq
\l__tag_tma_clist
\l__tag_tma_int
\l__tag_tma_box
\l__tag_tmpb_box

```

9

```

117 \tl_new:N    \l__tag_get_parent_tmpb_tl
118 \str_new:N    \l__tag_tmpa_str
119 \prop_new:N   \l__tag_tmpa_prop
120 \seq_new:N    \l__tag_tmpa_seq
121 \seq_new:N    \l__tag_tmpb_seq
122 \clist_new:N  \l__tag_tmpa_clist
123 \int_new:N    \l__tag_tmpa_int
124 \box_new:N    \l__tag_tmpa_box
125 \box_new:N    \l__tag_tmpb_box

```

(End of definition for `\l__tag_tmpa_tl` and others.)

Attribute lists for the label command. We have a list for mc-related labels, and one for structures.

```

\c__tag_property_mc_clist
  \c__tag_property_struct_clist
126 \clist_const:Nn \c__tag_property_mc_clist      {tagabspage,tagmcabs,tagmcid}
127 \clist_const:Nn \c__tag_property_struct_clist {tagstruct,tagstructobj}

```

(End of definition for `\c__tag_property_mc_clist` and `\c__tag_property_struct_clist`.)

`\l__tag_loglevel_int` This integer hold the log-level and so allows to control the messages. TODO: a list which log-level shows what is needed. The current behaviour is quite ad-hoc.

```
128 \int_new:N  \l__tag_loglevel_int
```

(End of definition for `\l__tag_loglevel_int`.)

`\g__tag_active_space_bool` These booleans should help to control the global behaviour of tagpdf. Ideally it should more or less do nothing if all are false. The space-boolean controls the interword space code, the mc-boolean activates `\tag_mc_begin:n`, the tree-boolean activates writing the finish code and the pdfmanagement related commands, the struct-boolean activates the storing of the structure data. In a normal document all should be active, the split is only there for debugging purpose. Structure destination will be activated automatically, but with the boolean struct-dest-boolean one can suppress them. Also we assume currently that they are set only at begin document. But if some control passing over groups are needed they could be perhaps used in a document too. TODO: check if they are used everywhere as needed and as wanted.

```

129 \bool_new:N \g__tag_active_space_bool
130 \bool_new:N \g__tag_active_mc_bool
131 \bool_new:N \g__tag_active_tree_bool
132 \bool_new:N \g__tag_active_struct_bool
133 \bool_new:N \g__tag_active_struct_dest_bool
134 \bool_gset_true:N \g__tag_active_struct_dest_bool

```

(End of definition for `\g__tag_active_space_bool` and others.)

`\l__tag_active_mc_bool` These booleans should help to control the *local* behaviour of tagpdf. In some cases it could e.g. be necessary to stop tagging completely. As local booleans they respect groups. TODO: check if they are used everywhere as needed and as wanted.

```

135 \bool_new:N \l__tag_active_mc_bool
136 \bool_set_true:N \l__tag_active_mc_bool
137 \bool_new:N \l__tag_active_struct_bool
138 \bool_set_true:N \l__tag_active_struct_bool
139 \bool_new:N \l__tag_active_socket_bool

```

*(End of definition for \l\_tag\_active\_mc\_bool, \l\_tag\_active\_struct\_bool, and \l\_tag\_active\_socket\_bool.)*

\g\_\_tag\_tagunmarked\_bool

This boolean controls if the code should try to automatically tag parts not in mc-chunk. It is currently only used in luamode. It would be possible to use it in generic mode, but this would create quite a lot empty artifact mc-chunks.

140 \bool\_new:N \g\_\_tag\_tagunmarked\_bool

*(End of definition for \g\_\_tag\_tagunmarked\_bool.)*

## 6 Variants of l3 commands

```
141 \prg_generate_conditional_variant:Nnn \pdf_object_if_exist:n {e}{T,F,TF}
142 \cs_generate_variant:Nn \pdf_object_ref:n {e}
143 \cs_generate_variant:Nn \pdfannot_dict_put:nnn {nne}
144 \cs_generate_variant:Nn \pdffile_embed_stream:nnn {nee,oee}
145 \cs_generate_variant:Nn \prop_gput:Nnn {Nee,Nen} %% unneeded
146 \cs_generate_variant:Nn \prop_put:Nnn {Nee} %% unneeded
147 \cs_generate_variant:Nn \prop_item:Nn {No,Ne} %% unneeded
148 \cs_generate_variant:Nn \seq_set_split:Nnn{Nne} %% unneeded
149 \cs_generate_variant:Nn \str_set_convert:Nnnn {Nonn, Noon, Nnon }
150 \cs_generate_variant:Nn \clist_map_inline:nn {on}
```

## 7 Label and Reference commands

To ease transition to properties we setup internal definition. They can be replaced by the property definitions once that is released. \*\* do it!

At first a command to define new properties

151 \cs\_new\_eq:NN \\_\_tag\_property\_new:nnnn \property\_new:nnnn

For the non-shipout code we need also the option to reset property

152 \cs\_new\_eq:NN \\_\_tag\_property\_gset:nnnn \property\_gset:nnnn

The command to reference while giving a local default.

```
153 \cs_new_eq:NN \__tag_property_ref:nnn \property_ref:nnn
154 \cs_new_eq:NN \__tag_property_ref:nn \property_ref:nn
```

The command to record

```
155 \cs_new_protected:Npn \__tag_property_record:nn #1#2
156 {
157     \@bsphack
158     \property_record:nn{#1}{#2}
159     \@esphack
160 }
161
```

And a few variants

```
162 \cs_generate_variant:Nn \__tag_property_ref:nnn {enn}
163 \cs_generate_variant:Nn \__tag_property_ref:nn {en}
164 \cs_generate_variant:Nn \__tag_property_record:nn {en,ev}
```

*(End of definition for \\_\_tag\_property\_new:nnnn, \\_\_tag\_property\_gset:nnnn, and \\_\_tag\_property\_ref:nnn.)*

`\_tag_property_ref_lastpage:nn` A command to retrieve the lastpage label, this will be adapted when there is a proper, kernel lastpage label.

```

165 \cs_new:Npn \_tag_property_ref_lastpage:nn #1 #2
166 {
167     \_tag_property_ref:nnn {@tag@LastPage}{#1}{#2}
168 }

```

(End of definition for `\_tag_property_ref_lastpage:nn`.)

## 8 Setup label attributes

**tagstruct** This are attributes used by the label/ref system. With structures we store the structure number `tagstruct` and the object reference `tagstructobj`. The second is needed to be able to reference a structure which hasn't been created yet. The alternative would be to create the object in such cases, but then we would have to check the object existence all the time.

With mc-chunks we store the absolute page number `tagabspage`, the absolute id `tagmcabc`, and the id on the page `tagmcid`.

```

169 \_tag_property_new:nnnn
170     { tagstruct } { now }
171     {0} { \int_use:N \c@g__tag_struct_abs_int }
172 \_tag_property_new:nnnn { tagstructobj } { now } {}
173     {
174         \pdf_object_ref_indexed:nn { __tag/struct } { \c@g__tag_struct_abs_int }
175     }

177     { tagabspage } { shipout }
178     {0} { \int_use:N \g_shipout_READONLY_int }
179 \_tag_property_new:nnnn { tagmcabs } { now }
180     {0} { \int_use:N \c@g__tag_MCID_abs_int }
181
182 \flag_new:n { __tag/mcid }
183 \_tag_property_new:nnnn {tagmcid } { shipout }
184     {0} { \flag_height:n { __tag/mcid } }
185

```

(End of definition for `tagstruct` and others. These functions are documented on page 6.)

## 9 Commands to fill seq and prop

With most engines these are simply copies of the expl3 commands, but luatex will overwrite them, to store the data also in lua tables.

```

\_\_tag\_prop\_new:N
\_\_tag\_prop\_new\_linked:N
    \_\_tag\_seq\_new:N
\_\_tag\_prop\_gput:Nnn
\_\_tag\_seq\_gput\_right:Nn
    \_\_tag\_seq\_item:cn
\_\_tag\_prop\_item:cn
    \_\_tag\_seq\_show:N
\_\_tag\_prop\_show:N

```

- 186 \cs\_set\_eq:NN \\_tag\_prop\_new:N \prop\_new:N
- 187 \cs\_set\_eq:NN \\_tag\_prop\_new\_linked:N \prop\_new\_linked:N
- 188 \cs\_set\_eq:NN \\_tag\_seq\_new:N \seq\_new:N
- 189 \cs\_set\_eq:NN \\_tag\_prop\_gput:Nnn \prop\_gput:Nnn
- 190 \cs\_set\_eq:NN \\_tag\_seq\_gput\_right:Nn \seq\_gput\_right:Nn
- 191 \cs\_set\_eq:NN \\_tag\_seq\_item:cn \seq\_item:cn
- 192 \cs\_set\_eq:NN \\_tag\_prop\_item:cn \prop\_item:cn
- 193 \cs\_set\_eq:NN \\_tag\_seq\_show:N \seq\_show:N

```

194 \cs_set_eq:NN \__tag_prop_show:N      \prop_show:N
195 % cnx temporary needed for latex-lab-graphic code
196 \cs_generate_variant:Nn \__tag_prop_gput:Nnn   { Nen , Nee , Nne , cnn , cen , cne , cno , cnx}
197 \cs_generate_variant:Nn \__tag_seq_gput_right:Nn { Ne , No , cn , ce }
198 \cs_generate_variant:Nn \__tag_prop_new:N    { c }
199 \cs_generate_variant:Nn \__tag_seq_new:N    { c }
200 \cs_generate_variant:Nn \__tag_seq_show:N   { c }
201 \cs_generate_variant:Nn \__tag_prop_show:N   { c }
202 
```

(End of definition for `\__tag_prop_new:N` and others.)

## 10 General tagging commands

`\tag_stop:` We need commands to stop tagging in some places. They switch local booleans and also stop the counting of paragraphs. The commands keep track of the nesting with a local counter. Tagging only is only restarted at the outer level, if the current level is 1. The commands with argument allow to give a label. This is only used in debugging messages to allow to follow the nesting.

When stop/start pairs are nested we do not want the inner start command to restart tagging. To control this we use a local int: The stop command will increase it. The starting will decrease it and only restart tagging, if it is zero. This will replace the label version.

```

\l_tag_stop_int
203 {*package | debug}
204 <package>\int_new:N \l_tag_stop_int

205 \cs_set_protected:Npn \tag_stop:
206 {
207 <debug> \msg_note:nne {tag / debug }{tag-stop}{ \int_use:N \l_tag_stop_int }
208   \int_incr:N \l_tag_stop_int
209   \bool_set_false:N \l_tag_active_struct_bool
210   \bool_set_false:N \l_tag_active_mc_bool
211   \bool_set_false:N \l_tag_active_socket_bool
212   \__tag_stop_para_ints:
213 }
214 \cs_set_protected:Npn \tag_start:

245     \__tag_start_para_ints:
246   }
247 \debug{ \msg_note:nne {tag / debug} {tag-start}{ \int_use:N \l__tag_tag_stop_int }{#1}
248 }
249 
```

(End of definition for `\tag_stop:` and others. These functions are documented on page 6.)

## 11 Keys for tagpdfsetup

TODO: the log-levels must be sorted

`activate/mc_(setup-key)`  
`activate/tree_(setup-key)`  
`activate/struct_(setup-key)`  
`activate/all_(setup-key)`  
`activate/struct-dest_(setup-key)`

```

258 
```

Keys to (globally) activate tagging. `activate/spaces` activates the additional parsing needed for interword spaces. It is defined in tagpdf-space. `activate/struct-dest` allows to activate or suppress structure destinations.

```

259 \keys_define:nn { __tag / setup }
260 {
261   activate/mc      .bool_gset:N = \g__tag_active_mc_bool,
262   activate/tree    .bool_gset:N = \g__tag_active_tree_bool,
263   activate/struct  .bool_gset:N = \g__tag_active_struct_bool,
264   activate/all     .meta:n =
265     {activate/mc={#1},activate/tree={#1},activate/struct={#1}},
266   activate/all     .default:n = true,
267   activate/struct-dest .bool_gset:N = \g__tag_active_struct_dest_bool,

```

old, deprecated names

```

268   activate-mc     .bool_gset:N = \g__tag_active_mc_bool,
269   activate-tree   .bool_gset:N = \g__tag_active_tree_bool,
270   activate-struct .bool_gset:N = \g__tag_active_struct_bool,
271   activate-all    .meta:n =

```

```

272     {activate/mc={#1},activate/tree={#1},activate/struct={#1}},
273     activate-all .default:n = true,
274     no-struct-dest .bool_gset_inverse:N = \g__tag_active_struct_dest_bool,

```

*(End of definition for activate/mc (setup-key) and others. These functions are documented on page 6.)*

**debug/show<sub>U</sub>(setup-key)** Subkeys/values are defined in various other places.

```
275     debug/show .choice:,
```

*(End of definition for debug/show (setup-key). This function is documented on page ??.)*

**debug/log<sub>U</sub>(setup-key)**

**debug/uncompress<sub>U</sub>(setup-key)**

```

logU(deprecated)
uncompressU(deprecated)
276     debug/log .choice:, .code:n = {\int_set:Nn \l__tag_loglevel_int { 0 }},
277     debug/log / none .code:n = {\int_set:Nn \l__tag_loglevel_int { 1 },
278     debug/log / v .code:n =
279     {
280         \int_set:Nn \l__tag_loglevel_int { 2 }
281         \cs_set_protected:Nn \__tag_check_typeout_v:n { \iow_term:e {##1} }
282     },
283     debug/log / vv .code:n = {\int_set:Nn \l__tag_loglevel_int { 3 }},
284     debug/log / vvv .code:n = {\int_set:Nn \l__tag_loglevel_int { 10 }},
285     debug/log / all .code:n = {\int_set:Nn \l__tag_loglevel_int { 10 }},
286     debug/uncompress .code:n = { \pdf_uncompress: },

```

deprecated but still needed as the documentmetadata key argument uses it.

```
287     log .meta:n = {debug/log={#1}},
288     uncompress .code:n = { \pdf_uncompress: },
```

*(End of definition for debug/log (setup-key) and others. These functions are documented on page 6.)*

**activate/tagunmarked<sub>U</sub>(setup-key)**

**tagunmarked<sub>U</sub>(deprecated)**

This key allows to set if (in luamode) unmarked text should be marked up as artifact. The initial value is true.

```

289     activate/tagunmarked .bool_gset:N = \g__tag_tagunmarked_bool,
290     activate/tagunmarked .initial:n = true,

```

deprecated name

```
291     tagunmarked .bool_gset:N = \g__tag_tagunmarked_bool,
```

*(End of definition for activate/tagunmarked (setup-key) and tagunmarked (deprecated). These functions are documented on page 6.)*

**page/tabsorder<sub>U</sub>(setup-key)**

**tabsorder<sub>U</sub>(deprecated)**

This sets the tabsorder on a page. The values are **row**, **column**, **structure** (default) or **none**. Currently this is set more or less globally. More finer control can be added if needed.

```

292     page/tabsorder .choice:, .code:n =
293     page/tabsorder / row .code:n =
294         \pdfmanagement_add:nnn { Page } {Tabs}{/R},
295     page/tabsorder / column .code:n =
296         \pdfmanagement_add:nnn { Page } {Tabs}{/C},
297     page/tabsorder / structure .code:n =
298         \pdfmanagement_add:nnn { Page } {Tabs}{/S},
299     page/tabsorder / none .code:n =
300         \pdfmanagement_remove:nn {Page} {Tabs},
301     page/tabsorder .initial:n = structure,

```

deprecated name

```
302     tabsorder .meta:n = {page/tabsorder={#1}},  
303 }
```

(End of definition for page/tabsorder (setup-key) and tabsorder (deprecated). These functions are documented on page 6.)

## 12 loading of engine/more dependent code

```
304 \sys_if_engine_luatex:T  
305 {  
306     \file_input:n {tagpdf-luatex.def}  
307 }  
308 ⟨/package⟩  
309 ⟨*mcloading⟩  
310 \bool_if:NTF \g__tag_mode_lua_bool  
311 {  
312     \RequirePackage {tagpdf-mc-code-lua}  
313 }  
314 {  
315     \RequirePackage {tagpdf-mc-code-generic} %  
316 }  
317 ⟨/mcloading⟩  
318 ⟨*debug⟩  
319 \bool_if:NTF \g__tag_mode_lua_bool  
320 {  
321     \RequirePackage {tagpdf-debug-lua}  
322 }  
323 {  
324     \RequirePackage {tagpdf-debug-generic} %  
325 }  
326 ⟨/debug⟩
```

## Part I

# The **tagpdf-checks** module

## Messages and check code

### Part of the tagpdf package

## 1 Commands

---

`\tag_if_active_p:` \* This command tests if tagging is active. It only gives true if all tagging has been activated, `\tag_if_active:TF` \* and if tagging hasn't been stopped locally.

---

`\tag_get:n` \* `\tag_get:n{<keyword>}`

This is a generic command to retrieve data for the current structure or mc-chunk. Currently the only sensible values for the argument `<keyword>` are `mc_tag`, `struct_tag`, `struct_id` and `struct_num`.

---

`\tag_if_box_tagged_p:N` \* `\tag_if_box_tagged:N{<box>}`

---

`\tag_if_box_tagged:NTF` \* This tests if a box contains tagging commands. It relies currently on that the code, that saved the box, correctly sets the command `\l_tag_box_\int_use:N #1_tl` to a positive value. The LaTeX commands will do that automatically at some time but it is in the responsibility of the user to ensure that when using low-level code. If the internal command doesn't exist the box is assumed to be untagged.

## 2 Description of log messages

### 2.1 \ShowTagging command

Argument	type	note
<code>\ShowTaggingmc-data = num</code>	log+term	lua-only
<code>\ShowTaggingmc-current</code>	log+term	
<code>\ShowTaggingstruck-stack= [log show]</code>	log or term+stop	
<code>\ShowTaggingdebug/structures = num</code>	log+termn	debug mode only

## 2.2 Messages in checks and commands

command	message	action
\@_check_structure_has_tag:n	struct-missing-tag	error
\@_check_structure_tag:N	role-unknown-tag	warning
\@_check_info_closing_struct:n	struct-show-closing	info

in enddocument/info-hook	para-hook-count-wrong	error (warning?)

## 2.3 Messages from the ptagging code

A few messages are issued in generic mode from the code which reinserts missing TMB/TME. This is currently done if log-level is larger than zero. TODO: reconsider log-level and messages when this code settles down.

## 2.4 Warning messages from the lua-code

The messages are triggered if the log-level is at least equal to the number.

message	log-level	remark
WARN TAG-NOT-TAGGED:	1	
WARN TAG-OPEN-MC:	1	
WARN SHIPOUT-MC-OPEN:	1	
WARN SHIPOUT-UPS:	0	shouldn't happen
WARN TEX-MC-INSERT-MISSING:	0	shouldn't happen
WARN TEX-MC-INSERT-NO-KIDS:	2	e.g. from empty hbox

## 2.5 Info messages from the lua-code

The messages are triggered if the log-level is at least equal to the number. TAG messages are from the traversing function, TEX from code used in the tagpdf-mc module. PARENTTREE is the code building the parenttree.

message	log-level	remark
INFO SHIPOUT-INSERT-LAST-EMC	3	finish of shipout code
INFO SPACE-FUNCTION-FONT	3	interwordspace code
INFO TAG-ABSPAGE	3	
INFO TAG-ARGS	4	
INFO TAG-ENDHEAD	4

INFO PARENTTREE-STRUCT-OBJREF	4	

## 2.6 Debug mode messages and code

If the package `tagpdf-debug` is loaded a number of commands are redefined and enhanced with additional commands which can be used to output debug messages or collect statistics. The commands are present but do nothing if the log-level is zero.

command	name	action	remark
\tag_mc_begin:n	mc-begin-insert	msg	
	mc-begin-ignore	msg	if inactive

## 2.7 Messages

---

<code>mc-nested</code>	Various messages related to mc-chunks. TODO document their meaning.
<code>mc-tag-missing</code>	
<code>mc-label-unknown</code>	
<code>mc-used-twice</code>	
<code>mc-not-open</code>	
<code>mc-pushed</code>	
<code>mc-popped</code>	
<code>mc-current</code>	

---

<b>struct-unknown</b>	Various messages related to structure. Check the definition in the code for their meaning and the arguments they take.
<b>struct-no-objnum</b>	
<b>struct-orphan</b>	
<b>struct-faulty-nesting</b>	
<b>struct-missing-tag</b>	
<b>struct-used-twice</b>	
<b>struct-label-unknown</b>	
<b>struct-show-closing</b>	
<b>tree-struct-still-open</b>	Message issued at the end of the compilation if there are (beside Root) other open structures on the stack.
<b>tree-statistic</b>	Message issued at the end of the compilation showing the number of objects to write
<b>show-struct</b>	These two messages are used in debug mode to show the current structures in the log
<b>show-kids</b>	and terminal.
<b>attr-unknown</b>	Message if an attribute is unknown.
<b>role-missing</b>	Messages related to role mapping.
<b>role-unknown</b>	
<b>role-unknown-tag</b>	
<b>role-unknown-NS</b>	
<b>role-tag</b>	
<b>new-tag</b>	
<b>role-parent-child</b>	
<b>role-remapping</b>	
<b>tree-mcid-index-wrong</b>	Used in the tree code, typically indicates the document must be rerun.
<b>sys-no-interwordspace</b>	Message if an engine doesn't support inter word spaces
<b>para-hook-count-wrong</b>	Message if the number of begin paragraph and end paragraph differ. This normally means faulty structure.
	<pre> 1 &lt;@@=tag&gt; 2 &lt;*header&gt; 3 \ProvidesExplPackage {tagpdf-checks-code} {2024-04-12} {0.99b} 4 {part of tagpdf - code related to checks, conditionals, debugging and messages} 5 &lt;/header&gt;</pre>

## 3 Messages

### 3.1 Messages related to mc-chunks

**mc-nested** This message is issued if a mc is opened before the previous has been closed. This is not relevant for luamode, as the attributes don't care about this. It is used in the `\@@_check_mc_if_nested:` test.

```
6  {*package}
7  \msg_new:nnn { tag } {mc-nested} { nested~marked~content~found~~~mcid~#1 }
```

(End of definition for `mc-nested`. This function is documented on page 19.)

**mc-tag-missing** If the tag is missing

```
8  \msg_new:nnn { tag } {mc-tag-missing} { required~tag~missing~~~mcid~#1 }
```

(End of definition for `mc-tag-missing`. This function is documented on page 19.)

**mc-label-unknown** If the label of a mc that is used in another place is not known (yet) or has been undefined as the mc was already used.

```
9  \msg_new:nnn { tag } {mc-label-unknown}
10  { label~#1~unknown~or~has~been~already~used.\\
11    Either~rerun~or~remove~one~of~the~uses. }
```

(End of definition for `mc-label-unknown`. This function is documented on page 19.)

**mc-used-twice** An mc-chunk can be inserted only in one structure. This indicates wrong coding and so should at least give a warning.

```
12 \msg_new:nnn { tag } {mc-used-twice} { mc~#1~has~been~already~used }
```

(End of definition for `mc-used-twice`. This function is documented on page 19.)

**mc-not-open** This is issued if a `\tag_mc_end:` is issued wrongly, wrong coding.

```
13 \msg_new:nnn { tag } {mc-not-open} { there~is~no~mc~to~end~at~#1 }
```

(End of definition for `mc-not-open`. This function is documented on page 19.)

**mc-pushed** Informational messages about mc-pushing.

**mc-popped**

```
14 \msg_new:nnn { tag } {mc-pushed} { #1~has~been~pushed~to~the~mc~stack}
15 \msg_new:nnn { tag } {mc-popped} { #1~has~been~removed~from~the~mc~stack }
```

(End of definition for `mc-pushed` and `mc-popped`. These functions are documented on page 19.)

**mc-current** Informational messages about current mc state.

```
16 \msg_new:nnn { tag } {mc-current}
17  { current~MC:~
18    \bool_if:NTF\g__tag_in_mc_bool
19      {abscnt=\__tag_get_mc_abs_cnt:,~tag=\g__tag_mc_key_tag_tl}
20      {no~MC~open,~current~abscnt=\__tag_get_mc_abs_cnt:"}
21  }
```

(End of definition for `mc-current`. This function is documented on page 19.)

## 3.2 Messages related to structures

**struct-unknown** if for example a parent key value points to structure that doesn't exist (yet)

```
22 \msg_new:nnn { tag } {struct-unknown}
23   { structure-with-number~#1~doesn't-exist\\ #2 }
```

(End of definition for **struct-unknown**. This function is documented on page 20.)

**struct-no-objnum** Should not happen ...

```
24 \msg_new:nnn { tag } {struct-no-objnum} { objnum~missing~for~structure~#1 }
```

(End of definition for **struct-no-objnum**. This function is documented on page 20.)

**struct-orphan** This indicates that there is a structure which has kids but no parent. This can happen if a structure is stashed but then not used.

```
25 \msg_new:nnn { tag } {struct-orphan}
26   {
27     Structure~#1~has~#2~kids~but~no~parent.\\
28     It~is~turned~into~an~artifact.\\
29     Did~you~stashed~a~structure~and~then~didn't~use~it?
30   }
31
```

(End of definition for **struct-orphan**. This function is documented on page 20.)

**struct-faulty-nesting** This indicates that there is somewhere one `\tag_struct_end`: too much. This should be normally an error.

```
32 \msg_new:nnn { tag }
33   {struct-faulty-nesting}
34   { there-is~no~open~structure~on~the~stack }
```

(End of definition for **struct-faulty-nesting**. This function is documented on page 20.)

**struct-missing-tag** A structure must have a tag.

```
35 \msg_new:nnn { tag } {struct-missing-tag} { a~structure~must~have~a~tag! }
```

(End of definition for **struct-missing-tag**. This function is documented on page 20.)

**struct-used-twice**

```
36 \msg_new:nnn { tag } {struct-used-twice}
37   { structure-with-label~#1~has~already~been~used}
```

(End of definition for **struct-used-twice**. This function is documented on page 20.)

**struct-label-unknown** label is unknown, typically needs a rerun.

```
38 \msg_new:nnn { tag } {struct-label-unknown}
39   { structure-with-label~#1~is~unknown~rerun}
```

(End of definition for **struct-label-unknown**. This function is documented on page 20.)

**struct-show-closing** Informational message shown if log-mode is high enough

```
40 \msg_new:nnn { tag } {struct-show-closing}
41   { closing-structure~#1~tagged~\use:e{\prop_item:cn{g__tag_struct_#1_prop}{S}} }
```

(End of definition for **struct-show-closing**. This function is documented on page 20.)

**tree-struct-still-open** Message issued at the end if there are beside Root other open structures on the stack.

```
42 \msg_new:nnn { tag } {tree-struct-still-open}
43 {
44     There~are~still~open~structures~on~the~stack!\\
45     The~stack~contains~\seq_use:Nn\g_tag_struct_tag_stack_seq{,}.\\
46     The~structures~are~automatically~closed,\\
47     but~their~nesting~can~be~wrong.
48 }
```

(End of definition for *tree-struct-still-open*. This function is documented on page 20.)

**tree-statistic** Message issued at the end showing the estimated number of structures and MC-childs

```
49 \msg_new:nnn { tag } {tree-statistic}
50 {
51     Finalizing~the~tagging~structure:\\
52     Writing~out~\c_tilde_str
53     \int_use:N\c@g__tag_struct_abs_int\c_space_tl~structure~objects\\
54     with~\c_tilde_str
55     \int_use:N\c@g__tag_MCID_abs_int\c_space_tl'MC'~leaf~nodes.\\
56     Be~patient~if~there~are~lots~of~objects!
57 }
58 
```

(End of definition for *tree-statistic*. This function is documented on page 20.)

The following messages are only needed in debug mode.

**show-struct** These two messages are used to show the current structures in the log and terminal.

```
59 <*debug>
60 \msg_new:nnn { tag/debug } { show-struct }
61 {
62     =====\\
63     The~structure~#1~
64     \tl_if_empty:nTF {#2}
65     { is-empty \\> . }
66     { contains: #2 }
67     \\
68 }
69 \msg_new:nnn { tag/debug } { show-kids }
70 {
71     The~structure~has~the~following~kids:
72     \tl_if_empty:nTF {#2}
73     { \\>~ NONE }
74     { #2 }
75     \\
76     =====
77 }
78 
```

(End of definition for *show-struct* and *show-kids*. These functions are documented on page 20.)

### 3.3 Attributes

Not much yet, as attributes aren't used so much.

#### attr-unknown

```
79  {*package}
80  \msg_new:nnn { tag } {attr-unknown}  { attribute~#1~is~unknown}
```

(End of definition for attr-unknown. This function is documented on page 20.)

### 3.4 Roles

#### role-missing

#### role-unknown

#### role-unknown-tag

#### role-unknown-NS

Warning message if either the tag or the role is missing

```
81  \msg_new:nnn { tag } {role-missing}      { tag~#1~has~no~role~assigned  }
82  \msg_new:nnn { tag } {role-unknown}       { role~#1~is~not~known  }
83  \msg_new:nnn { tag } {role-unknown-tag}   { tag~#1~is~not~known  }
84  \msg_new:nnn { tag } {role-unknown-NS}    { \tl_if_empty:nTF{#1}{Empty~NS}{NS~#1~is~not~known}}
```

(End of definition for role-missing and others. These functions are documented on page 20.)

#### role-parent-child

This is info and warning message about the containment rules between child and parent tags.

```
85  \msg_new:nnn { tag } {role-parent-child}
86    { Parent-Child~'#1'--->~'#2'.\\Relation-is~#3~\msg_line_context:}
```

(End of definition for role-parent-child. This function is documented on page 20.)

#### role-remapping

This is info and warning message about role-remapping

```
87  \msg_new:nnn { tag } {role-remapping}
88    { remapping~tag~to~#1 }
```

(End of definition for role-remapping. This function is documented on page 20.)

#### role-tag

Info messages.

```
89  \msg_new:nnn { tag } {role-tag}          { mapping~tag~#1~to~role~#2  }
90  \msg_new:nnn { tag } {new-tag}           { adding~new~tag~#1  }
91  \msg_new:nnn { tag } {read-namespace}    { reading~namespace~definitions~tagpdf-
92    ns~#1.def  }
93  \msg_new:nnn { tag } {namespace-missing}{ namespace~definitions~tagpdf~ns~#1.def~not~found  }
94  \msg_new:nnn { tag } {namespace-unknown}{ namespace~#1~is~not~declared }
```

(End of definition for role-tag and new-tag. These functions are documented on page 20.)

### 3.5 Miscellaneous

#### tree-mcid-index-wrong

Used in the tree code, typically indicates the document must be rerun.

```
94  \msg_new:nnn { tag } {tree-mcid-index-wrong}
95    {something~is~wrong~with~the~mcid--rerun}
```

(End of definition for tree-mcid-index-wrong. This function is documented on page 20.)

#### sys-no-interwordspace

Currently only pdflatex and lualatex have some support for real spaces.

```
96  \msg_new:nnn { tag } {sys-no-interwordspace}
97    {engine/output~mode~#1~doesn't~support~the~interword~spaces}
```

(End of definition for sys-no-interwordspace. This function is documented on page 20.)

`\__tag_check_typeout_v:n` A simple logging function. By default it gobbles its argument, but the log-keys sets it to typeout.

```
98 \cs_set_eq:NN \__tag_check_typeout_v:n \use_none:n
```

(End of definition for `\__tag_check_typeout_v:n`.)

`para-hook-count-wrong` At the end of the document we check if the count of para-begin and para-end is identical. If not we issue a warning: this is normally a coding error and breaks the structure.

```
99 \msg_new:nnn { tag } {para-hook-count-wrong}
100   {The~number~of~automatic~begin~(#1)~and~end~(#2)~#3~para~hooks~differ!}
101   {This~quite~probably~a~coding~error~and~the~structure~will~be~wrong!}
102 
```

(End of definition for `para-hook-count-wrong`. This function is documented on page 20.)

## 4 Retrieving data

`\tag_get:n` This retrieves some data. This is a generic command to retrieve data. Currently the only sensible values for the argument are `mc_tag`, `struct_tag` and `struct_num`.

```
103 <base>\cs_new:Npn \tag_get:n #1 { \use:c {__tag_get_data_#1:} }
```

(End of definition for `\tag_get:n`. This function is documented on page 17.)

## 5 User conditionals

`\tag_if_active_p:` This tests if tagging is active. This allows packages to add conditional code. The test is true if all booleans, the global and the two local one are true.

```
104 <*base>
105 \prg_new_conditional:Npnn \tag_if_active: { p , T , TF, F }
106   { \prg_return_false: }
107 
```

`\tag_if_active:TF`

```
108 <*package>
109 \prg_set_conditional:Npnn \tag_if_active: { p , T , TF, F }
110   {
111     \bool_lazy_all:nTF
112     {
113       {\g__tag_active_struct_bool}
114       {\g__tag_active_mc_bool}
115       {\g__tag_active_tree_bool}
116       {\l__tag_active_struct_bool}
117       {\l__tag_active_mc_bool}
118     }
119     {
120       \prg_return_true:
121     }
122     {
123       \prg_return_false:
124     }
125   }
126 
```

(End of definition for `\tag_if_active:TF`. This function is documented on page 17.)

\tag\_if\_box\_tagged\_p:N  
\tag\_if\_box\_tagged:NTF

This tests if a box contains tagging commands. It relies on that the code that saved the box correctly set  $\l_1\text{tag}_\text{box}_{<\text{box number}>}\text{tl}$  to a positive value. The LaTeX commands will do that automatically at some time but it is in the responsibility of the user to ensure that when using low-level code. If the internal command doesn't exist the box is assumed to be untagged.

```
127  {*base}
128  \prg_new_conditional:Npnn \tag_if_box_tagged:N #1 {p,T,F,TF}
129  {
130      \tl_if_exist:cTF {\l_1\text{tag}_\text{box}_\int_use:N #1_tl}
131      {
132          \int_compare:nNnTF {0\tl_use:c{\l_1\text{tag}_\text{box}_\int_use:N #1_tl}}>{0}
133          { \prg_return_true: }
134          { \prg_return_false: }
135      }
136      {
137          \prg_return_false:
138          % warning??
139      }
140  }
141  
```

(End of definition for \tag\_if\_box\_tagged:NTF. This function is documented on page 17.)

## 6 Internal checks

These are checks used in various places in the code.

### 6.1 checks for active tagging

\\_\_tag\_check\_if\_active\_mc:TF

This checks if mc are active.

```
142  {*package}
143  \prg_new_conditional:Npnn \__tag_check_if_active_mc: {T,F,TF}
144  {
145      \bool_lazy_and:nnTF { \g__tag_active_mc_bool } { \l__tag_active_mc_bool }
146      {
147          \prg_return_true:
148      }
149      {
150          \prg_return_false:
151      }
152  }
153  \prg_new_conditional:Npnn \__tag_check_if_active_struct: {T,F,TF}
154  {
155      \bool_lazy_and:nnTF { \g__tag_active_struct_bool } { \l__tag_active_struct_bool }
156      {
157          \prg_return_true:
158      }
159      {
160          \prg_return_false:
161      }
162  }
```

(End of definition for \\_\_tag\_check\_if\_active\_mc:TF and \\_\_tag\_check\_if\_active\_struct:TF.)

## 6.2 Checks related to structures

`\_tag_check_structure_has_tag:n`  
 Structures must have a tag, so we check if the S entry is in the property. It is an error if this is missing. The argument is a number. The tests for existence and type is split in structures, as the tags are stored differently to the mc case.

```

163 \cs_new_protected:Npn \_tag_check_structure_has_tag:n #1 %#1 struct num
164 {
165     \prop_if_in:cnF { g__tag_struct_#1_prop }
166     {S}
167     {
168         \msg_error:nn { tag } {struct-missing-tag}
169     }
170 }
```

(End of definition for `\_tag_check_structure_has_tag:n`.)

`\_tag_check_structure_tag:N`  
 This checks if the name of the tag is known, either because it is a standard type or has been rolemapped.

```

171 \cs_new_protected:Npn \_tag_check_structure_tag:N #1
172 {
173     \prop_if_in:NoF \g__tag_role_tags_NS_prop {#1}
174     {
175         \msg_warning:nne { tag } {role-unknown-tag} {#1}
176     }
177 }
```

(End of definition for `\_tag_check_structure_tag:N`.)

`\_tag_check_info_closing_struct:n`  
 This info message is issued at a closing structure, the use should be guarded by log-level.

```

178 \cs_new_protected:Npn \_tag_check_info_closing_struct:n #1 %#1 struct num
179 {
180     \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
181     {
182         \msg_info:nnn { tag } {struct-show-closing} {#1}
183     }
184 }
185
186 \cs_generate_variant:Nn \_tag_check_info_closing_struct:n {o,e}
```

(End of definition for `\_tag_check_info_closing_struct:n`.)

`\_tag_check_no_open_struct:`  
 This checks if there is an open structure. It should be used when trying to close a structure. It errors if false.

```

187 \cs_new_protected:Npn \_tag_check_no_open_struct:
188 {
189     \msg_error:nn { tag } {struct-faulty-nesting}
190 }
```

(End of definition for `\_tag_check_no_open_struct:`)

`\_tag_check_struct_used:n`  
 This checks if a stashed structure has already been used.

```

191 \cs_new_protected:Npn \_tag_check_struct_used:n #1 %#1 label
192 {
193     \prop_get:cnNT
194     {g__tag_struct_}\_tag_property_ref:enn{tagpdfstruct-#1}{tagstruct}{unknown}_prop}
```

```

195     {P}
196     \l__tag_tmpa_tl
197     {
198         \msg_warning:nnn { tag } {struct-used-twice} {#1}
199     }
200 }
```

*(End of definition for \\_\_tag\_check\_struct\_used:n.)*

### 6.3 Checks related to roles

\\_\_tag\_check\_add\_tag\_role:nn This check is used when defining a new role mapping.

```

201 \cs_new_protected:Npn \__tag_check_add_tag_role:nn #1 #2 %#1 tag, #2 role
202 {
203     \tl_if_empty:nTF {#2}
204     {
205         \msg_error:nnn { tag } {role-missing} {#1}
206     }
207     {
208         \prop_get:NnNT \g__tag_role_tags_NS_prop {#2} \l_tmpa_tl
209         {
210             \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
211             {
212                 \msg_info:nnnn { tag } {role-tag} {#1} {#2}
213             }
214         }
215         {
216             \msg_error:nnn { tag } {role-unknown} {#2}
217         }
218     }
219 }
```

Similar with a namespace

```

220 \cs_new_protected:Npn \__tag_check_add_tag_role:nnn #1 #2 #3 %#1 tag/NS, #2 role #3 namespace
221 {
222     \tl_if_empty:nTF {#2}
223     {
224         \msg_error:nnn { tag } {role-missing} {#1}
225     }
226     {
227         \prop_get:cNNT { g__tag_role_NS_#3_prop } {#2} \l_tmpa_tl
228         {
229             \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
230             {
231                 \msg_info:nnnn { tag } {role-tag} {#1} {#2/#3}
232             }
233         }
234         {
235             \msg_error:nnn { tag } {role-unknown} {#2/#3}
236         }
237     }
238 }
```

*(End of definition for \\_\_tag\_check\_add\_tag\_role:nn.)*

## 6.4 Check related to mc-chunks

\\_\\_tag\\_check\\_mc\\_if\\_nested:  
\\_\\_tag\\_check\\_mc\\_if\\_open:  
Two tests if a mc is currently open. One for the true (for begin code), one for the false part (for end code).

```

239 \cs_new_protected:Npn \_\_tag_check_mc_if_nested:
240 {
241     \_\_tag_mc_if_in:T
242     {
243         \msg_warning:nne { tag } {mc-nested} { \_\_tag_get_mc_abs_cnt: }
244     }
245 }
246
247 \cs_new_protected:Npn \_\_tag_check_mc_if_open:
248 {
249     \_\_tag_mc_if_in:F
250     {
251         \msg_warning:nne { tag } {mc-not-open} { \_\_tag_get_mc_abs_cnt: }
252     }
253 }
```

(End of definition for \\_\\_tag\\_check\\_mc\\_if\\_nested: and \\_\\_tag\\_check\\_mc\\_if\\_open:.)

\\_\\_tag\\_check\\_mc\\_pushed\\_popped:nn  
This creates an information message if mc's are pushed or popped. The first argument is a word (pushed or popped), the second the tag name. With larger log-level the stack is shown too.

```

254 \cs_new_protected:Npn \_\_tag_check_mc_pushed_popped:nn #1 #2
255 {
256     \int_compare:nNnT
257     { \l_\_tag_loglevel_int } ={ 2 }
258     { \msg_info:nne {tag}{mc-#1}{#2} }
259     \int_compare:nNnT
260     { \l_\_tag_loglevel_int } > { 2 }
261     {
262         \msg_info:nne {tag}{mc-#1}{#2}
263         \seq_log:N \g_\_tag_mc_stack_seq
264     }
265 }
```

(End of definition for \\_\\_tag\\_check\\_mc\\_pushed\\_popped:nn.)

\\_\\_tag\\_check\\_mc\\_tag:N  
This checks if the mc has a (known) tag.

```

266 \cs_new_protected:Npn \_\_tag_check_mc_tag:N #1 %#1 is var with a tag name in it
267 {
268     \tl_if_empty:NT #1
269     {
270         \msg_error:nne { tag } {mc-tag-missing} { \_\_tag_get_mc_abs_cnt: }
271     }
272     \prop_if_in:NoF \g_\_tag_role_tags_NS_prop {#1}
273     {
274         \msg_warning:nne { tag } {role-unknown-tag} {#1}
275     }
276 }
```

(End of definition for \\_\\_tag\\_check\\_mc\\_tag:N.)

```
\g_tag_check_mc_used_intarray
\__tag_check_init_mc_used:
```

This variable holds the list of used mc numbers. Everytime we store a mc-number we will add one the relevant array index If everything is right at the end there should be only 1 until the max count of the mcid. 2 indicates that one mcid was used twice, 0 that we lost one. In engines other than luatex the total number of all intarray entries are restricted so we use only a rather small value of 65536, and we initialize the array only at first used, guarded by the log-level. This check is probably only needed for debugging. TODO does this really make sense to check? When can it happen??

```
277 \cs_new_protected:Npn \__tag_check_init_mc_used:
278 {
279     \intarray_new:Nn \g__tag_check_mc_used_intarray { 65536 }
280     \cs_gset_eq:NN \__tag_check_init_mc_used: \prg_do_nothing:
281 }
```

*(End of definition for \g\_\_tag\_check\_mc\_used\_intarray and \\_\_tag\_check\_init\_mc\_used:.)*

```
\__tag_check_mc_used:n
```

This checks if a mc is used twice.

```
282 \cs_new_protected:Npn \__tag_check_mc_used:n #1 %#1 mcid abscnt
283 {
284     \int_compare:nNnT {\l__tag_loglevel_int} > { 2 }
285     {
286         \__tag_check_init_mc_used:
287         \intarray_gset:Nnn \g__tag_check_mc_used_intarray
288             {#1}
289             { \intarray_item:Nn \g__tag_check_mc_used_intarray {#1} + 1 }
290         \int_compare:nNnT
291             {
292                 \intarray_item:Nn \g__tag_check_mc_used_intarray {#1}
293             }
294             >
295             { 1 }
296             {
297                 \msg_warning:nnn { tag } {mc-used-twice} {#1}
298             }
299     }
300 }
```

*(End of definition for \\_\_tag\_check\_mc\_used:n.)*

```
\__tag_check_show_MCID_by_page:
```

This allows to show the mc on a page. Currently unused.

```
301 \cs_new_protected:Npn \__tag_check_show_MCID_by_page:
302 {
303     \tl_set:Ne \l__tag_tmpa_tl
304     {
305         \__tag_property_ref_lastpage:nn
306             {abspage}
307             {-1}
308     }
309     \int_step_inline:nnnn {1}{1}
310     {
311         \l__tag_tmpa_tl
312     }
313     {

345 }
346 }
```

(End of definition for `\__tag_check_show_MCID_by_page:..`)

## 6.5 Checks related to the state of MC on a page or in a split stream

The following checks are currently only usable in generic mode as they rely on the marks defined in the mc-generic module. They are used to detect if a mc-chunk has been split by a page break or similar and additional end/begin commands are needed.

`\__tag_check_mc_in_galley_p:` At first we need a test to decide if `\tag_mc_begin:n` (tmb) and `\tag_mc_end:` (tme) has been used at all on the current galley. As each command issues two slightly different marks we can do it by comparing firstmarks and botmarks. The test assumes that the marks have been already mapped into the sequence with `\@@_mc_get_marks:..`. As `\seq_if_eq:NNTF` doesn't exist we use the tl-test.

```

347 \prg_new_conditional:Npn \__tag_check_if_mc_in_galley: { T,F,TF }
348 {
349     \tl_if_eq:NNTF \l__tag_mc_firstmarks_seq \l__tag_mc_botmarks_seq
350     { \prg_return_false: }
351     { \prg_return_true: }
352 }
```

(End of definition for `\__tag_check_mc_in_galley:TF.`)

```
\_\_tag\_check\_if\_mc\_tmb\_missing_p:  
\_\_tag\_check\_if\_mc\_tmb\_missing:TF
```

This checks if a extra top mark (“extra-tmb”) is needed. According to the analysis this the case if the firstmarks start with `e-` or `b+`. Like above we assume that the marks content is already in the seq’s.

```
353 \prg_new_conditional:Npnn \_\_tag\_check\_if\_mc\_tmb\_missing: { T,F,TF }
354 {
355   \bool_if:nTF
356   {
357     \str_if_eq_p:ee {\seq_item:Nn \l__tag_mc_firstmarks_seq {1}}{e-}
358     ||
359     \str_if_eq_p:ee {\seq_item:Nn \l__tag_mc_firstmarks_seq {1}}{b+}
360   }
361   { \prg_return_true: }
362   { \prg_return_false: }
363 }
```

*(End of definition for \\_\\_tag\\_check\\_if\\_mc\\_tmb\\_missing:TF.)*

```
\_\_tag\_check\_if\_mc\_tme\_missing_p:  
\_\_tag\_check\_if\_mc\_tme\_missing:TF
```

This checks if a extra bottom mark (“extra-tme”) is needed. According to the analysis this the case if the botmarks starts with `b+`. Like above we assume that the marks content is already in the seq’s.

```
364 \prg_new_conditional:Npnn \_\_tag\_check\_if\_mc\_tme\_missing: { T,F,TF }
365 {
366   \str_if_eq:eeTF {\seq_item:Nn \l__tag_mc_botmarks_seq {1}}{b+}
367   { \prg_return_true: }
368   { \prg_return_false: }
369 }
```

*(End of definition for \\_\\_tag\\_check\\_if\\_mc\\_tme\\_missing:TF.)*

```
370 </package>
```

```
371 <*debug>
```

Code for tagpdf-debug. This will probably change over time. At first something for the mc commands.

```
372 \msg_new:nnn { tag / debug } {mc-begin} { MC~begin~#1~with~options:~\tl_to_str:n{#2}~[\msg_line_context:] }
373 \msg_new:nnn { tag / debug } {mc-end} { MC~end~#1~[\msg_line_context:] }

374 \cs_new_protected:Npn \_\_tag_debug_mc_begin_insert:n #
375 {
376   \int_compare:nNnT { \l__tag_loglevel_int } > {0}
377   {
378     \msg_note:nnnn { tag / debug } {mc-begin} {inserted} { #1 }
379   }
380 }
381 \cs_new_protected:Npn \_\_tag_debug_mc_begin_ignore:n #
382 {
383   \int_compare:nNnT { \l__tag_loglevel_int } > {0}
384   {
385     \msg_note:nnnn { tag / debug } {mc-begin} {ignored} { #1 }
386   }
387 }
388 \cs_new_protected:Npn \_\_tag_debug_mc_end_insert:
389 {
390   \int_compare:nNnT { \l__tag_loglevel_int } > {0}
```

```

392     {
393         \msg_note:nnn { tag / debug } {mc-end} {inserted}
394     }
395 }
396 \cs_new_protected:Npn \__tag_debug_mc_end_ignore:
397 {
398     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
399     {
400         \msg_note:nnn { tag / debug } {mc-end} {ignored}
401     }
402 }

```

And now something for the structures

```

403 \msg_new:nnn { tag / debug } {struct-begin}
404 {
405     Struct-\tag_get:n{struct_num}~begin~#1~with~options:~\tl_to_str:n{#2}~\\[\msg_line_context]
406 }
407 \msg_new:nnn { tag / debug } {struct-end}
408 {
409     Struct-end~#1~[\msg_line_context:]
410 }
411 \msg_new:nnn { tag / debug } {struct-end-wrong}
412 {
413     Struct-end~#1~doesn't-fit-start~#2~[\msg_line_context:]
414 }
415
416 \cs_new_protected:Npn \__tag_debug_struct_begin_insert:n #1
417 {
418     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
419     {
420         \msg_note:nnnn { tag / debug } {struct-begin} {inserted} { #1 }
421         \seq_log:N \g__tag_struct_tag_stack_seq
422     }
423 }
424 \cs_new_protected:Npn \__tag_debug_struct_begin_ignore:n #1
425 {
426     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
427     {
428         \msg_note:nnnn { tag / debug } {struct-begin} {ignored} { #1 }
429     }
430 }
431 \cs_new_protected:Npn \__tag_debug_struct_end_insert:
432 {
433     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
434     {
435         \msg_note:nnn { tag / debug } {struct-end} {inserted}
436         \seq_log:N \g__tag_struct_tag_stack_seq
437     }
438 }
439 \cs_new_protected:Npn \__tag_debug_struct_end_ignore:
440 {
441     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
442     {
443         \msg_note:nnn { tag / debug } {struct-end} {ignored}
444     }

```

```

445 }
446 \cs_new_protected:Npn \__tag_debug_struct_end_check:n #1
447 {
448     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
449     {
450         \seq_get:NNT \g__tag_struct_tag_stack_seq \l__tag_tmpa_tl
451         {
452             \str_if_eq:eeF
453             {#1}
454             {\exp_last_unbraced:NV\use_i:nn \l__tag_tmpa_tl}
455             {
456                 \msg_warning:nnee { tag/debug }{ struct-end-wrong }
457                 {#1}
458                 {\exp_last_unbraced:NV\use_i:nn \l__tag_tmpa_tl}
459             }
460         }
461     }
462 }
```

This tracks tag stop and start. The tag-stop message should go before the int is increased. The tag-start message after the int is decreased.

```

463 \msg_new:nnn { tag / debug } {tag-stop}
464 {
465     \int_if_zero:nTF
466     {#1}
467     {Tagging~stopped}
468     {Tagging~(not)~stopped~(already~inactive)}\\
469     level:~#1==>~\int_eval:n{#1+1}\tl_if_empty:nF{#2}{,~label:~#2}~[\msg_line_context:]
470 }
471 \msg_new:nnn { tag / debug } {tag-start}
472 {
473     \int_if_zero:nTF
474     {#1}
475     {Tagging~restarted}
476     {Tagging~(not)~restarted}\\
477     level:~\int_eval:n{#1+1}==>~#1\tl_if_empty:nF{#2}{,~label:~#2}~[\msg_line_context:]
478 }
479 
```

## 6.6 Benchmarks

It doesn't make much sense to do benchmarks in debug mode or in combination with a log-level as this would slow down the compilation. So we add simple commands that can be activated if l3benchmark has been loaded. TODO: is a warning needed?

```

480 {*package}
481 \cs_new_protected:Npn \__tag_check_benchmark_tic:{}
482 \cs_new_protected:Npn \__tag_check_benchmark_toc:{}
483 \cs_new_protected:Npn \tag_check_benchmark_on:
484 {
485     \cs_if_exist:NT \benchmark_tic:
486     {
487         \cs_set_eq:NN \__tag_check_benchmark_tic: \benchmark_tic:
488         \cs_set_eq:NN \__tag_check_benchmark_toc: \benchmark_toc:
```

```
489      }
490  }
491 </package>
```

## Part II

# The **tagpdf-user** module

## Code related to L<sup>A</sup>T<sub>E</sub>X2e user commands and document commands

### Part of the tagpdf package

## 1 Setup commands

---

`\tagpdfsetup \tagpdfsetup{<key val list>}`

This is the main setup command to adapt the behaviour of tagpdf. It can be used in the preamble and in the document (but not all keys make sense there).

---

`activate_{setup-key}` And additional setup key which combine the other activate keys `activate/mc`, `activate/tree`, `activate/struct` and additionally adds a document structure.

---

`\tag_tool:n \tag_tool:n{<key val>}`

---

`\tagtool` The tagging of basic document elements will require a variety of small commands to configure and adapt the tagging. This command will collect them under a command interface. The argument is *one* key-value like string. This is work in progress and both syntax, known arguments and implementation can change!

## 2 Commands related to mc-chunks

---

`\tagmcbegin \tagmcbegin {<key-val>}`  
`\tagmcend \tagmcend`  
`\tagmcuse \tagmcuse{<label>}`

These are wrappers around `\tag_mc_begin:n`, `\tag_mc_end:` and `\tag_mc_use:n`. The commands and their argument are documented in the tagpdf-mc module. In difference to the expl3 commands, `\tagmcbegin` issues also an `\ignorespaces`, and `\tagmcend` will issue in horizontal mode an `\unskip`.

---

`\tagmcifinTF \tagmcifin {<true code>} {<false code>}`

This is a wrapper around `\tag_mc_if_in:TF`. and tests if an mc is open or not. It is mostly of importance for pdflatex as lualatex doesn't mind much if a mc tag is not correctly closed. Unlike the expl3 command it is not expandable.

The command is probably not of much use and will perhaps disappear in future versions. It normally makes more sense to push/pop an mc-chunk.

### 3 Commands related to structures

---

```
\tagstructbegin \tagstructbegin {<key-val>}
\tagstructend \tagstructend
\tagstructuse \tagstructuse{<label>}
```

These are direct wrappers around `\tag_struct_begin:n`, `\tag_struct_end:` and `\tag_struct_use:n`. The commands and their argument are documented in the `tagpdf-struct` module.

### 4 Debugging

---

```
\ShowTagging \ShowTagging {<key-val>}
```

This is a generic function to output various debugging helps. It not necessarily stops the compilation. The keys and their function are described below.

---

```
mc-data (show-key) mc-data = <number>
```

This key is (currently?) relevant for lua mode only. It shows the data of all mc-chunks created so far. It is accurate only after shipout (and perhaps a second compilation), so typically should be issued after a newpage. The value is a positive integer and sets the first mc-shown. If no value is given, 1 is used and so all mc-chunks created so far are shown.

---

```
mc-current (show-key) mc-current
```

This key shows the number and the tag of the currently open mc-chunk. If no chunk is open it shows only the state of the abs count. It works in all mode, but the output in luamode looks different.

---

```
mc-marks (show-key) mc-marks = show|use
```

This key helps to debug the page marks. It should only be used at shipout in header or footer.

---

```
struct-stack (show-key) struct-stack = log|show
```

This key shows the current structure stack. With `log` the info is only written to the log-file, `show` stops the compilation and shows on the terminal. If no value is used, then the default is `show`.

---

```
debug/structures (show-key) debug/structures = <structure number>
```

This key is available only if the `tagpdf-debug` package is loaded and shows all structures starting with the one with the number given by the key.

## 5 Extension commands

The following commands and code parts are not core commands of tagpdf. They either provide work-arounds for missing functionality elsewhere, or do a first step to apply tagpdf commands to document commands.

The commands and keys should be view as experimental!

This part will be regularly revisited to check if the code should go to a better place or can be improved and so can change easily.

### 5.1 Fake space

---

`\pdffakespace` (lua-only) This provides a lua-version of the `\pdffakespace` primitive of pdftex.

### 5.2 Tagging of paragraphs

This makes use of the paragraph hooks in LaTeX to automate the tagging of paragraph. It requires sane paragraph nesting, faulty code, e.g. a missing `\par` at the end of a low-level vbox can highly confuse the tagging. The tags should be carefully checked if this is used.

---

```
para/tagging_(setup-key)      para/tagging = true|false
paratagging-show_(deprecated) debug/show=para
paratagging_(deprecated)      debug/show=paraOff
```

---

The `para/tagging` key can be used in `\tagpdfsetup` and enable/disables tagging of paragraphs. `debug/show=para` puts small colored numbers at the begin and end of a paragraph. This is meant as a debugging help. The number are boxes and have a (tiny) height, so they can affect typesetting.

---

`\tagpdfparaOn` These commands allow to enable/disable para tagging too and are a bit faster then `\tagpdfsetup`. But I'm not sure if the names are good.  
`\tagpdfparaOff`

---

`\tagpdfsuppressmarks` This command allows to suppress the creation of the marks. It takes an argument which should normally be one of the mc-commands, puts a group around it and suppress the marks creation in this group. This command should be used if the begin and end command are at different boxing levels. E.g.

```
\@hangfrom
{
  \tagstructbegin{tag=H1}%
  \tagmcbegin    {tag=H1}%
  #2
}
{#3\tagpdfsuppressmarks{\tagmcend}\tagstructend}%
```

### 5.3 Header and footer

Header and footer are automatically tagged as artifact: They are surrounded by an artifact-mc and inside tagging is stopped. If some real content is in the header and footer, tagging must be restarted there explicitly. The behaviour can be changed with the following key. The key accepts the values `true` (the default), `false` which disables the header tagging code. This can be useful if the page style is empty (it then avoids empty mc-chunks) or if the head and foot should be tagged in some special way. The last value, `pagination`, is like `true` but additionally adds an artifact structure with an `pagination` attribute.

---

```
page/exclude-header-footer \setup-key page/exclude-header-footer = true|false|pagination
```

---

### 5.4 Link tagging

Links need a special structure and cross reference system. This is added through hooks of the l3pdfannot module and will work automatically if tagging is activated.

Links should (probably) have an alternative text in the `Contents` key. It is unclear which text this should be and how to get it. Currently the code simply adds the fix texts `url` and `ref`. Another text can be added by changing the dictionary value:

```
\pdfannot_dict_put:nnn
{ link/GoTo }
{ Contents }
{ (ref) }
```

## 6 Socket support

---

```
\tag_socket_use:n \tag_socket_use:n {\<socket name>}
\tag_socket_use:nn \tag_socket_use:nn {\<socket name>} {\<socket argument>}
\UseTaggingSocket \UseTaggingSocket {\<socket name>}
\UseTaggingSocket {\<socket name>} {\<socket argument>}
```

---

The next L<sup>A</sup>T<sub>E</sub>X (2024-06-01) will use special sockets for the tagging.

These sockets will use names starting with `tagsupport/`. Usually, these sockets have exactly two plugs defined: `noop` (when no tagging is requested or tagging is not wanted for some reason) and a second plug that enables the tagging. There may be more, e.g., tagging with special debugging, etc., but right now it is usually just on or off.

Given that we sometimes have to suspend tagging, it would be fairly inefficient to put different plugs into these sockets whenever that happens. We therefore offer `\UseTaggingSocket` which is like `\UseSocket` except that the socket name is specified without `tagsupport/`, i.e.,

```
\UseTaggingSocket{foo} → \UseSocket{tagsupport/foo}
```

Beside being slightly shorter, the big advantage is that this way we can change `\UseTaggingSocket` to do nothing by switching a boolean instead of changing the plugs of the tagging support sockets back and forth.

It is possible to use the tagging support sockets with \UseSocket directly, but in this case the socket remains active if e.g. \SuspendTagging is in force. There may be reasons for doing that but in general we expect to always use \UseTaggingSocket.

The L3 programming layer versions \tag\_socket\_use:n and \tag\_socket\_use:nn are slightly more efficient than \UseTaggingSocket because they do not have to determine how many arguments the socket takes when disabling it.

## 7 User commands and extensions of document commands

```

1 <@@=tag>
2 <*header>
3 \ProvidesExplPackage {tagpdf-user} {2024-04-12} {0.99b}
4   {tagpdf - user commands}
5 </header>
```

## 8 Setup and preamble commands

```
\tagpdfsetup
6 <base>\NewDocumentCommand \tagpdfsetup { m }{ {} }
7 <*package>
8 \RenewDocumentCommand \tagpdfsetup { m }
9   {
10     \keys_set:nn { __tag / setup } { #1 }
11   }
12 </package>
```

(End of definition for \tagpdfsetup. This function is documented on page 36.)

\tag\_tool:n  
This is a first definition of the tool command. Currently it uses key-val, but this should be probably be flattened to speed it up.

```

13 <base>\cs_new_protected:Npn\tag_tool:n #1 {}
14 <base>\cs_set_eq:NN\tagtool\tag_tool:n
15 <*package>
16 \cs_set_protected:Npn\tag_tool:n #1
17   {
18     \tag_if_active:T { \keys_set:nn {tag / tool}{#1} }
19   }
20 \cs_set_eq:NN\tagtool\tag_tool:n
21 </package>
```

(End of definition for \tag\_tool:n and \tagtool. These functions are documented on page 36.)

## 9 Commands for the mc-chunks

```
\tagmcbegin
\tagmcend
\tagmcuse
22 <*base>
23 \NewDocumentCommand \tagmcbegin { m }
24   {
25     \tag_mc_begin:n {#1}
26   }
```

```

27
28
29 \NewDocumentCommand \tagmcend { }
30 {
31     \tag_mc_end:
32 }
33
34 \NewDocumentCommand \tagmcuse { m }
35 {
36     \tag_mc_use:n {#1}
37 }
38 
```

*(End of definition for \tagmcbegin, \tagmcend, and \tagmcuse. These functions are documented on page 36.)*

**\tagmcifinTF** This is a wrapper around \tag\_mc\_if\_in: and tests if an mc is open or not. It is mostly of importance for pdflatex as lualatex doesn't mind if a mc tag is not correctly closed. Unlike the expl3 command it is not expandable.

```

39 <*package>
40 \NewDocumentCommand \tagmcifinTF { m m }
41 {
42     \tag_mc_if_in:TF { #1 } { #2 }
43 }
44 
```

*(End of definition for \tagmcifinTF. This function is documented on page 36.)*

## 10 Commands for the structure

**\tagstructbegin** **\tagstructend** **\tagstructuse** These are structure related user commands. There are direct wrapper around the expl3 variants.

```

45 <*base>
46 \NewDocumentCommand \tagstructbegin { m }
47 {
48     \tag_struct_begin:n {#1}
49 }
50
51 \NewDocumentCommand \tagstructend { }
52 {
53     \tag_struct_end:
54 }
55
56 \NewDocumentCommand \tagstructuse { m }
57 {
58     \tag_struct_use:n {#1}
59 }
60 
```

*(End of definition for \tagstructbegin, \tagstructend, and \tagstructuse. These functions are documented on page 37.)*

## 11 Socket support

Until we can be sure that the kernel defines the commands we provide them before redefining them:

```
61  <*base>
62  \providecommand\tag_socket_use:n[1]{}
63  \providecommand\tag_socket_use:nn[2]{}
64  \providecommand\UseTaggingSocket[1]{}
65  </base>

\tag_socket_use:n
\tag_socket_use:nn
\UseTaggingSocket
66  <*package>
67  \cs_set_protected:Npn \tag_socket_use:n #1
68  {
69      \bool_if:NT \l__tag_active_socket_bool
70      { \UseSocket {tagsupport/#1} }
71  }
72  \cs_set_protected:Npn \tag_socket_use:nn #1#2
73  {
74      \bool_if:NT \l__tag_active_socket_bool
75      { \UseSocket {tagsupport/#1} {#2} }
76  }
77  \cs_set_protected:Npn \UseTaggingSocket #1
78  {
79      \bool_if:NTF \l__tag_active_socket_bool
80      { \UseSocket{tagsupport/#1} }
81      {
82          \int_case:nnF
83          { \int_use:c { c__socket_tagsupport/#1_args_int } }
84          {
85              0 \prg_do_nothing:
86              1 \use_none:n
87              2 \use_none:nn
88          }
89          \ERRORusetaggingsocket
90      }
91  }
92 </package>
```

We do not expect tagging sockets with more than one or two arguments, so for now we only provide those.

```
88
89
90
91
92 </package>
```

(End of definition for \tag\_socket\_use:n, \tag\_socket\_use:nn, and \UseTaggingSocket. These functions are documented on page 39.)

## 12 Debugging

\ShowTagging This is a generic command for various show commands. It takes a keyval list, the various keys are implemented below.

```
93  <*package>
94  \NewDocumentCommand\ShowTagging { m }
95  {
```

```

96     \keys_set:nn { __tag / show }{ #1}
97
98 }

```

(End of definition for `\ShowTagging`. This function is documented on page 37.)

- mc-data (show-key)** This key is (currently?) relevant for lua mode only. It shows the data of all mc-chunks created so far. It is accurate only after shipout, so typically should be issued after a newpage. With the optional argument the minimal number can be set.

```

99 \keys_define:nn { __tag / show }
100 {
101   mc-data .code:n =
102   {
103     \sys_if_engine_luatex:T
104     {
105       \lua_now:e{ltx.__tag.trace.show_all_mc_data(#1,\__tag_get_mc_abs_cnt:,0)}
106     }
107   }
108   ,mc-data .default:n = 1
109 }
110

```

(End of definition for `mc-data (show-key)`. This function is documented on page 37.)

- mc-current (show-key)** This shows some info about the current mc-chunk. It works in generic and lua-mode.

```

111 \keys_define:nn { __tag / show }
112 {
113   mc-current .code:n =
114   {
115     \bool_if:NTF \g__tag_mode_lua_bool
116     {
117       \sys_if_engine_luatex:T
118       {
119         \int_compare:nNnTF
120         {
121           -2147483647
122           =
123           {
124             \lua_now:e
125             {
126               tex.print
127               (tex.getattribute
128               (luatexbase.attributes.g__tag_mc_cnt_attr))
129             }
130           }
131           {
132             \lua_now:e
133             {
134               ltx.__tag.trace.log
135               (
136                 "mc-current:~no~MC~open,~current~abscnt
137                 =\__tag_get_mc_abs_cnt:"
138                 ,0
139               )
140               texio.write_nl("")
141             }
142           }
143         }
144       }
145     }
146   }
147 }
148

```

```

140     }
141     {
142         \lua_now:e
143         {
144             ltx._.tag.trace.log
145             (
146                 "mc-current:~abscnt=\_\_tag_get_mc_abs_cnt=="
147                 ..
148                 tex.getattribute(luatexbase.attributes.g\_tag_mc_cnt_attr)
149                 ..
150                 "\~=>tag="
151                 ..
152                 tostring
153                     (ltx._.tag.func.get_tag_from
154                         (tex.getattribute
155                             (luatexbase.attributes.g\_tag_mc_type_attr)))
156                         ..
157                         "="
158                         ..
159                         tex.getattribute
160                             (luatexbase.attributes.g\_tag_mc_type_attr)
161                             ,0
162                         )
163                         texio.write_nl("")
164                     }
165                 }
166             }
167         }
168         {
169             \msg_note:nn{ tag }{ mc-current }
170         }
171     }
172 }
```

(End of definition for `mc-current (show-key)`. This function is documented on page 37.)

**mc-marks (show-key)** It maps the mc-marks into the sequences and then shows them. This allows to inspect the first and last mc-Mark on a page. It should only be used in the shipout (header/footer).

```

173 \keys_define:nn { __tag / show }
174   {
175     mc-marks .choice: ,
176     mc-marks / show .code:n =
177     {
178       \__tag_mc_get_marks:
179       \__tag_check_if_mc_in_galley:TF
180       {
181         \iow_term:n {Marks~from~this~page:~}
182       }
183       {
184         \iow_term:n {Marks~from~a~previous~page:~}
185       }
186       \seq_show:N \l__tag_mc_firstmarks_seq
187       \seq_show:N \l__tag_mc_botmarks_seq
188       \__tag_check_if_mc_tmb_missing:T
```

```

189      {
190         \iow_term:n {BDC~missing~on~this~page!}
191     }
192     \_\_tag\_check\_if\_mc\_tme\_missing:T
193     {
194         \iow_term:n {EMC~missing~on~this~page!}
195     }
196 },
197 mc-marks / use .code:n =
198 {
199     \_\_tag_mc_get_marks:
200     \_\_tag_check_if_mc_in_galley:TF
201     { Marks~from~this~page:~}
202     { Marks~from~a~previous~page:~}
203     \seq_use:Nn \l_\_tag_mc_firstmarks_seq {,~}\quad
204     \seq_use:Nn \l_\_tag_mc_botmarks_seq {,~}\quad
205     \_\_tag_check_if_mc_tmb_missing:T
206     {
207         BDC~missing~
208     }
209     \_\_tag_check_if_mc_tme_missing:T
210     {
211         EMC~missing
212     }
213 },
214 mc-marks .default:n = show
215 }

```

(End of definition for `mc-marks (show-key)`. This function is documented on page 37.)

#### `struct-stack (show-key)`

```

216 \keys_define:nn { __tag / show }
217 {
218     struct-stack .choice:
219     ,struct-stack / log .code:n = \seq_log:N \g__tag_struct_tag_stack_seq
220     ,struct-stack / show .code:n = \seq_show:N \g__tag_struct_tag_stack_seq
221     ,struct-stack .default:n = show
222 }
223 
```

(End of definition for `struct-stack (show-key)`. This function is documented on page 37.)

#### `debug/structures (show-key)`

The following key is available only if the tagpdf-debug package is loaded and shows all structures starting with the one with the number given by the key.

```

224 (*debug)
225 \keys_define:nn { __tag / show }
226 {
227     ,debug/structures .code:n =
228     {
229         \int_step_inline:nnn{#1}{\c@g__tag_struct_abs_int}
230         {
231             \msg_term:nnnnn
232             { tag/debug } { show-struct }
233             { ##1 }

```

```

234 {
235   \prop_map_function:cN
236   {g__tag_struct_debug_##1_prop}
237   \msg_show_item_unbraced:nn
238 }
239 { } { }
240 \msg_term:nneeee
241   { tag/debug } { show-kids }
242   { ##1 }
243   {
244     \seq_map_function:cN
245     {g__tag_struct_debug_kids_##1_seq}
246     \msg_show_item_unbraced:n
247   }
248 { } { }
249 }
250 }
251 ,debug/structures .default:n = 1
252 }
253 </debug>

```

(End of definition for `debug/structures` (`show-key`). This function is documented on page 37.)

## 13 Commands to extend document commands

The following commands and code parts are not core commands of tagpdf. They either provide work-arounds for missing functionality elsewhere, or do a first step to apply tagpdf commands to document commands. This part should be regularly revisited to check if the code should go to a better place or can be improved.

```
254 <*package>
```

### 13.1 Document structure

```

\g__tag_root_default_tl
  activate(setup-key)
activate/socket(setup-key)
255 \tl_new:N\g__tag_root_default_tl
256 \tl_gset:Nn\g__tag_root_default_tl {Document}
257
258 \hook_gput_code:nnn{begindocument}{tagpdf}{\tagstructbegin{tag=\g__tag_root_default_tl}}
259 \hook_gput_code:nnn{tagpdf/finish/before}{tagpdf}{\tagstructend}
260
261 \keys_define:nn { __tag / setup }
262 {
263   activate/socket .bool_set:N = \l__tag_active_socket_bool,
264   activate .code:n =
265   {
266     \keys_set:nn { __tag / setup }
267     { activate/mc,activate/tree,activate/struct,activate/socket }
268     \tl_gset:Nn\g__tag_root_default_tl {#1}
269   },
270   activate .default:n = Document
271 }
272

```

(End of definition for `\g__tag_root_default_tl`, `activate (setup-key)`, and `activate/socket (setup-key)`. These functions are documented on page 36.)

## 13.2 Structure destinations

Since TeXlive 2022 pdftex and luatex offer support for structure destinations and the pdfmanagement has backend support for. We activate them if structures are actually created. Structure destinations are actually PDF 2.0 only but they don't harm in older PDF and can improve html export.

```

273 \AddToHook{begindocument/before}
274 {
275   \bool_lazy_and:nnT
276   { \g__tag_active_struct_dest_bool }
277   { \g__tag_active_struct_bool }
278   {
279     \tl_set:Nn \l_pdf_current_structure_destination_tl
280     { \_tag/struct}{\g__tag_struct_stack_current_tl } }
281     \pdf_activate_indexed_structure_destination:
282   }
283 }
```

## 13.3 Fake space

**\pdffakespace** We need a luatex variant for `\pdffakespace`. This should probably go into the kernel at some time. We also provide a no-op version for dvi mode

```

284 \sys_if_engine_luatex:T
285 {
286   \NewDocumentCommand{\pdffakespace} { }
287   {
288     \_tag_fakespace:
289   }
290 }
291 \providetcommand{\pdffakespace{}}
```

(End of definition for `\pdffakespace`. This function is documented on page 38.)

## 13.4 Paratagging

The following are some simple commands to enable/disable paratagging. Probably one should add some checks if we are already in a paragraph.

At first some variables.

```

\l__tag_para_bool
\l__tag_para_flattened_bool
\l__tag_para_show_bool
\g__tag_para_begin_int
\g__tag_para_end_int
\g__tag_para_main_begin_int
\g__tag_para_main_end_int
\g__tag_para_main_struct_tl
\l__tag_para_tag_default_tl
\l__tag_para_tag_tl
\l__tag_para_main_tag_tl
\l__tag_para_attr_class_tl
\l__tag_para_main_attr_class_tl
```

this will hold the structure number of the current text-unit.

```

300 \tl_new:N    \g__tag_para_main_struct_tl
301 \tl_gset:Nn  \g__tag_para_main_struct_tl {1}
302 \tl_new:N    \l__tag_para_tag_default_tl
303 \tl_set:Nn   \l__tag_para_tag_default_tl { text }
304 \tl_new:N    \l__tag_para_tag_tl
305 \tl_set:Nn   \l__tag_para_tag_tl { \l__tag_para_tag_default_tl }
306 \tl_new:N    \l__tag_para_main_tag_tl
307 \tl_set:Nn   \l__tag_para_main_tag_tl {text-unit}

```

this is perhaps already defined by the block code

```

308 \tl_if_exist:NF \l__tag_para_attr_class_tl
309   {\tl_new:N \l__tag_para_attr_class_tl }
310 \tl_new:N \l__tag_para_main_attr_class_tl

```

*(End of definition for \l\_\_tag\_para\_bool and others.)*

\\_\\_tag\\_gincr\\_para\\_main\\_begin\\_int:  
\\_\\_tag\\_gincr\\_para\\_main\\_end\\_int:  
The global para counter should be set through commands so that \tag\_stop: can stop them.

```

311 \cs_new_protected:Npn \_\_tag_gincr_para_main_begin_int:
312 {
313   \int_gincr:N \g__tag_para_main_begin_int
314 }
315 \cs_new_protected:Npn \_\_tag_gincr_para_begin_int:
316 {
317   \int_gincr:N \g__tag_para_begin_int
318 }
319 \cs_new_protected:Npn \_\_tag_gincr_para_main_end_int:
320 {
321   \int_gincr:N \g__tag_para_main_end_int
322 }
323 \cs_new_protected:Npn \_\_tag_gincr_para_end_int:
324 {
325   \int_gincr:N \g__tag_para_end_int
326 }

```

*(End of definition for \\_\\_tag\_gincr\_para\_main\_begin\_int: and others.)*

```

\_\_tag_start_para_ints:
\_\_tag_stop_para_ints:
327 \cs_new_protected:Npn \_\_tag_start_para_ints:
328 {
329   \cs_set_protected:Npn \_\_tag_gincr_para_main_begin_int:
330   {
331     \int_gincr:N \g__tag_para_main_begin_int
332   }
333   \cs_set_protected:Npn \_\_tag_gincr_para_begin_int:
334   {
335     \int_gincr:N \g__tag_para_begin_int
336   }
337   \cs_set_protected:Npn \_\_tag_gincr_para_main_end_int:
338   {
339     \int_gincr:N \g__tag_para_main_end_int
340   }
341   \cs_set_protected:Npn \_\_tag_gincr_para_end_int:

```

```

342     {
343         \int_gincr:N \g__tag_para_end_int
344     }
345 }
346 \cs_new_protected:Npn \__tag_stop_para_ints:
347 {
348     \cs_set_eq:NN \__tag_gincr_para_main_begin_int:\prg_do_nothing:
349     \cs_set_eq:NN \__tag_gincr_para_begin_int: \prg_do_nothing:
350     \cs_set_eq:NN \__tag_gincr_para_main_end_int: \prg_do_nothing:
351     \cs_set_eq:NN \__tag_gincr_para_end_int: \prg_do_nothing:
352 }

```

(End of definition for `\__tag_start_para_ints:` and `\__tag_stop_para_ints:..`)

We want to be able to inspect the current para main structure, so we need a command to store its structure number

`\__tag_para_main_store_struct:`

```

353 \cs_new:Npn \__tag_para_main_store_struct:
354 {
355     \tl_gset:Nn \g__tag_para_main_struct_tl {\int_use:N \c@g__tag_struct_abs_int }
356 }

```

(End of definition for `\__tag_para_main_store_struct:..`)

TEMPORARILY FIX (2023-11-17). Until latex-lab is updated we must adapt a sec command:

```

357 \AddToHook{package/latex-lab-testphase-sec/after}
358 {
359     \cs_set_protected:Npn \@kernel@tag@hangfrom #1
360     {
361         \tagstructbegin{tag=\l__tag_para_tag_tl}
362         \__tag_gincr_para_begin_int:
363         \tagstructbegin{tag=Lbl}
364         \setbox\@tempboxa
365             \hbox
366             {
367                 \bool_lazy_and:nnT
368                     {\tag_if_active_p:}
369                     {\g__tag_mode_lua_bool}
370                     {\tagmcbegin{tag=Lbl}}
371                     {#1}
372             }
373         \tag_stop:n{hangfrom}
374         \hangindent \wd\@tempboxa\noindent
375         \tag_start:n{hangfrom}
376         \tagmcbegin{}\box\@tempboxa\tagmcend\tagstructend\tagmcbegin{}
377     }
378 }

```

and one temporary adoptions for the block module:

```

379 \AddToHook{package/latex-lab-testphase-block/after}
380 {
381     \tl_if_exist:NT \l__tag_para_attr_class_tl
382     {
383         \tl_set:Nn \l__tag_para_attr_class_tl { \l__tag_para_attr_class_tl }
384     }

```

```
385 }
386
```

**para/tagging<sub>U</sub>(setup-key)**

**para/tag<sub>U</sub>(setup-key)**

**para/maintag<sub>U</sub>(setup-key)**

**para/tagging<sub>U</sub>(tool-key)**

**para/tag<sub>U</sub>(tool-key)**

**para/maintag<sub>U</sub>(tool-key)**

**para/flattened<sub>U</sub>(tool-key)**

**unittag<sub>U</sub>(deprecated)**

**para-flattened<sub>U</sub>(deprecated)**

**paratagging<sub>U</sub>(deprecated)**

**paratagging-show<sub>U</sub>(deprecated)**

**paratag<sub>U</sub>(deprecated)**

These keys enable/disable locally paratagging. Paragraphs are typically tagged with two structure: A main structure around the whole paragraph, and inner structures around the various chunks. Debugging can be activated locally with **debug/show=para**, this can affect the typesetting as the small numbers are boxes and they have a (small) height. Debugging can be deactivated with **debug/show=para0ff**. The **para/tag** key sets the tag used by the inner structure, **para/maintag** the tag of the outer structure, both can also be changed with **\tag\_tool:n**

```
387 \keys_define:nn { __tag / setup }
388 {
389   para/tagging      .bool_set:N = \l__tag_para_bool,
390   debug/show/para   .code:n = {\bool_set_true:N \l__tag_para_show_bool},
391   debug/show/para0ff .code:n = {\bool_set_false:N \l__tag_para_show_bool},
392   para/tag         .tl_set:N  = \l__tag_para_tag_tl,
393   para/maintag     .tl_set:N  = \l__tag_para_main_tag_tl,
394   para/flattened   .bool_set:N = \l__tag_para_flattened_bool
395 }
396 \keys_define:nn { tag / tool }
397 {

414   para-flattened .bool_set:N = \l__tag_para_flattened_bool
415 }
```

(End of definition for **para/tagging (setup-key)** and others. These functions are documented on page 38.)

Helper command for debugging:

```
416 \cs_new_protected:Npn \__tag_check_para_begin_show:nn #1 #2
417 %#1 color, #2 prefix
418 {
419   \bool_if:NT \l__tag_para_show_bool
420   {
421     \tag_mc_begin:n{artifact}
422     \llap{\color_select:n{#1}\tiny#2\int_use:N\g__tag_para_begin_int\ }
423     \tag_mc_end:
424 }
```

```

425     }
426
427 \cs_new_protected:Npn \__tag_check_para_end_show:nn #1 #2
428   %#1 color, #2 prefix
429   {
430     \bool_if:NT \l__tag_para_show_bool
431     {
432       \tag_mc_begin:n{artifact}
433       \rlap{\color_select:n{#1}\tiny\ #2\int_use:N\g__tag_para_end_int}
434       \tag_mc_end:
435     }
436   }

```

The para/begin and para/end code. We have two variants here: a simpler one, which must be used if the block code is not used (and so probably will disappear at some time) and a more sophisticated one that must be used if the block code is used. It is possible that we will need more variants, so we setup a socket so that the code can be easily switched.

```

437 \socket_new:nn      {tagsupport/para/begin}{0}
438 \socket_new:nn      {tagsupport/para/end}{0}
439
440 \socket_new_plug:nnn{tagsupport/para/begin}{plain}
441 {
442   \bool_if:NT \l__tag_para_bool
443   {
444     \bool_if:NF \l__tag_para_flattened_bool
445     {
446       \__tag_gincr_para_main_begin_int:
447       \tag_struct_begin:n
448       {

482 \tag_struct_begin:n
483 {
484     tag=\l_tag_para_tag_tl
485     ,attribute-class=\l_tag_para_attr_class_tl
486 }
487 \_\_tag_check_para_begin_show:nn {green}{\PARALABEL}
488 \tag_mc_begin:n {}
489 }
490 }
491 }

```

there was no real difference between the original and in the block variant, only a debug message. We therefore define only a plain variant.

```

492 \socket_new_plug:nnn{tagsupport/para/end}{plain}
493 {
494     \bool_if:NT \l_tag_para_bool
495     {
496         \_\_tag_gincr_para_end_int:
497         \_\_tag_check_typeout_v:n {==>~increment~ /P \on@line }
498         \tag_mc_end:
499         \_\_tag_check_para_end_show:nn {red}{}
500         \tag_struct_end:
501         \bool_if:NF \l_tag_para_flattened_bool
502         {
503             \_\_tag_gincr_para_main_end_int:
504             \tag_struct_end:
505         }
506     }
507 }

```

By default we assign the plain plug:

```

508 \socket_assign_plug:nn { tagsupport/para/begin}{plain}
509 \socket_assign_plug:nn { tagsupport/para/end}{plain}

```

And use the sockets in the hooks. Once tagging sockets exist, this can be adapted.

```

510 \AddToHook{para/begin}{ \socket_use:n { tagsupport/para/begin } }
511 }
512 \AddToHook{para/end} { \socket_use:n { tagsupport/para/end } }

```

If the block code is loaded we must ensure that it doesn't overwrite the hook again. And we must reassign the para/begin plug. This can go once the block code no longer tries to adapt the hooks.

```

513 \AddToHook{package/latex-lab-testphase-block/after}
514 {
515     \RemoveFromHook{para/begin}[tagpdf]
516     \RemoveFromHook{para/end}[latex-lab-testphase-block]

```

```

517     \AddToHook{para/begin}[tagpdf]
518     {
519         \socket_use:n { tagsupport/para/begin }
520     }
521 \AddToHook{para/end}[tagpdf]
522     {
523         \socket_use:n { tagsupport/para/end }
524     }
525 \socket_assign_plug:nn { tagsupport/para/begin}{block}
526 }
527

```

We check the para count at the end. If tagging is not active it is not a error, but we issue a warning as it perhaps indicates that the testphase code didn't guard everything correctly.

```

528 \AddToHook{enddocument/info}
529 {
530     \tag_if_active:F
531     {
532         \msg_redirect_name:nnn { tag } { para-hook-count-wrong } { warning }
533     }
534 \int_compare:nNnF {\g__tag_para_main_begin_int}={\g__tag_para_main_end_int}
535     {
536         \msg_error:nneee

```

**\tagpdfparaOn** This two command switch para mode on and off. **\tagpdfsetup** could be used too but is longer. An alternative is **\tag\_tool:n{para=false}**

```

590 <base>\newcommand\tagpdfparaOn {}
591 <base>\newcommand\tagpdfparaOff{}
592 {*package}
593 \renewcommand\tagpdfparaOn {\bool_set_true:N \l__tag_para_bool}
594 \renewcommand\tagpdfparaOff{\bool_set_false:N \l__tag_para_bool}

```

(End of definition for **\tagpdfparaOn** and **\tagpdfparaOff**. These functions are documented on page 38.)

**\tagpdfsuppressmarks** This command allows to suppress the creation of the marks. It takes an argument which should normally be one of the mc-commands, puts a group around it and suppress the marks creation in this group. This command should be used if the begin and end command are at different boxing levels. E.g.

```

\@hangfrom
{
    \tagstructbegin{tag=H1}%
    \tagmcbegin      {tag=H1}%
    #2
}
{#3\tagpdfsuppressmarks{\tagmcend}\tagstructend}%

595 \NewDocumentCommand\tagpdfsuppressmarks{m}
596   {{\use:c{\__tag_mc_disable_marks:}} #1}}

```

(End of definition for **\tagpdfsuppressmarks**. This function is documented on page 38.)

## 13.5 Language support

With the following key the lang variable is set. All structures in the current group will then set this lang variable.

```
test/lang{\setup-key}
597 \keys_define:nn { __tag / setup }
598   {
599     text / lang .tl_set:N = \l__tag_struct_lang_tl
600   }
(End of definition for test/lang (setup-key). This function is documented on page ??.)
```

## 13.6 Header and footer

Header and footer should normally be tagged as artifacts. The following code requires the new hooks. For now we allow to disable this function, but probably the code should always there at the end. TODO check if Pagination should be changeable.

```
601 \cs_new_protected:Npn\__tag_hook_kernel_before_head:{}
602 \cs_new_protected:Npn\__tag_hook_kernel_after_head:{}
603 \cs_new_protected:Npn\__tag_hook_kernel_before_foot:{}
604 \cs_new_protected:Npn\__tag_hook_kernel_after_foot:{}
605
606 \AddToHook{begindocument}
607 {
608   \cs_if_exist:NT \@kernel@before@head
609   {
610     \tl_put_right:Nn \@kernel@before@head {\__tag_hook_kernel_before_head:{}}
611     \tl_put_left:Nn \@kernel@after@head {\__tag_hook_kernel_after_head:{}}
612     \tl_put_right:Nn \@kernel@before@foot {\__tag_hook_kernel_before_foot:{}}
613     \tl_put_left:Nn \@kernel@after@foot {\__tag_hook_kernel_after_foot:{}}
614   }
615 }
616
617 \bool_new:N \g__tag_saved_in_mc_bool
618 \cs_new_protected:Npn \__tag_exclude_headfoot_begin:
619 {
620   \bool_set_false:N \l__tag_para_bool
621   \bool_if:NTF \g__tag_mode_lua_bool
622   {
623     \tag_mc_end_push:
624   }
625   {
626     \bool_gset_eq:NN \g__tag_saved_in_mc_bool \g__tag_in_mc_bool
627     \bool_gset_false:N \g__tag_in_mc_bool
628   }
629   \tag_mc_begin:n {artifact}
630   \tag_stop:n{headfoot}
631 }
632 \cs_new_protected:Npn \__tag_exclude_headfoot_end:
633 {
634   \tag_start:n{headfoot}
635   \tag_mc_end:
636   \bool_if:NTF \g__tag_mode_lua_bool
```

```

637 {
638   \tag_mc_begin_pop:n{}
639 }
640 {
641   \bool_gset_eq:NN \g__tag_in_mc_bool\g__tag_saved_in_mc_bool
642 }
643 }

```

This version allows to use an Artifact structure

```

644 \__tag_attr_new_entry:nn {__tag/attr/pagination}{/0(Artif/Type/Pagination}
645 \cs_new_protected:Npn \__tag_exclude_struct_headfoot_begin:n #1
646 {
647   \bool_set_false:N \l__tag_para_bool
648   \bool_if:NTF \g__tag_mode_lua_bool
649   {
650     \tag_mc_end_push:
651   }
652   {
653     \bool_gset_eq:NN \g__tag_saved_in_mc_bool \g__tag_in_mc_bool
654     \bool_gset_false:N \g__tag_in_mc_bool
655   }
656   \tag_struct_begin:n{tag=Artifact,attribute-class=__tag/attr/#1}
657   \tag_mc_begin:n {artifact=#1}
658   \tag_stop:n{headfoot}
659 }
660
661 \cs_new_protected:Npn \__tag_exclude_struct_headfoot_end:
662 {
663   \tag_start:n{headfoot}
664   \tag_mc_end:
665   \tag_struct_end:
666   \bool_if:NTF \g__tag_mode_lua_bool
667   {
668     \tag_mc_begin_pop:n{}
669   }
670   {
671     \bool_gset_eq:NN \g__tag_in_mc_bool\g__tag_saved_in_mc_bool
672   }
673 }

```

And now the keys

```

page/exclude-header-footer_(setup-key)
exclude-header-footer_(deprecated)
674 \keys_define:nn { __tag / setup }
{
675   page/exclude-header-footer .choice:,
676   page/exclude-header-footer / true .code:n =

700 exclude-header-footer .meta:n = { page/exclude-header-footer = {#1} }
701 }

```

*(End of definition for `page/exclude-header-footer` (`setup-key`) and `exclude-header-footer` (deprecated). These functions are documented on page 39.)*

## 13.7 Links

We need to close and reopen mc-chunks around links. Currently we handle URI and GoTo (internal) links. Links should have an alternative text in the Contents key. It is unclear which text this should be and how to get it.

```

702 \hook_gput_code:nnn
703 {pdfannot/link/URI/before}
704 {tagpdf}
705 {
706     \tag_mc_end_push:
707     \tag_struct_begin:n { tag=Link }
708     \tag_mc_begin:n { tag=Link }
709     \pdfannot_dict_put:nne
710         { link/URI }
711         { StructParent }
712         { \tag_struct_parent_int: }
713 }
714
715 \hook_gput_code:nnn
716 {pdfannot/link/URI/after}
717 {tagpdf}
718 {
719     \tag_struct_insert_annot:ee {\pdfannot_link_ref_last:}{\tag_struct_parent_int:}
720     \tag_mc_end:
721     \tag_struct_end:
722     \tag_mc_begin_pop:n{}
723 }
724
725 \hook_gput_code:nnn
726 {pdfannot/link/GoTo/before}
727 {tagpdf}
728 {

```

```

729   \tag_mc_end_push:
730   \tag_struct_begin:n{tag=Link}
731   \tag_mc_begin:n{tag=Link}
732   \pdfannot_dict_put:nne
733     { link/GoTo }
734     { StructParent }
735     { \tag_struct_parent_int: }
736   }
737
738 \hook_gput_code:nnn
739   {pdfannot/link/GoTo/after}
740   {tagpdf}
741   {
742     \tag_struct_insert_annot:ee {\pdfannot_link_ref_last:}{\tag_struct_parent_int:}
743     \tag_mc_end:
744     \tag_struct_end:
745     \tag_mc_begin_pop:n{}
746   }
747
748 % "alternative descriptions " for PAX3. How to get better text here??
749 \pdfannot_dict_put:nnn
750   { link/URI }
751   { Contents }
752   { (url) }
753
754 \pdfannot_dict_put:nnn
755   { link/GoTo }
756   { Contents }
757   { (ref) }
758
759 </package>

```

## Part III

# The **tagpdf-tree** module

## Commands trees and main dictionaries

## Part of the tagpdf package

```
1 <@@=tag>
2 <*header>
3 \ProvidesExplPackage {tagpdf-tree-code} {2024-04-12} {0.99b}
4 {part of tagpdf - code related to writing trees and dictionaries to the pdf}
5 </header>
```

### 1 Trees, pdfmanagement and finalization code

The code to finish the structure is in a hook. This will perhaps at the end be a kernel hook. TODO check right place for the code. The pdfmanagement code is the kernel hook after shipout/lastpage so all code affecting it should be before. Objects can be written later, at least in pdf mode.

```
6 <*package>
7 \hook_gput_code:nnn{begindocument}{tagpdf}
8 {
9     \bool_if:NT \g__tag_active_tree_bool
10    {
11        \sys_if_output_pdf:TF
12        {
13            \AddToHook{enddocument/end} { \__tag_finish_structure: }
14        }
15        {
16            \AddToHook{shipout/lastpage} { \__tag_finish_structure: }
17        }
18    }
19 }
```

#### 1.1 Check structure

```
\__tag_tree_final_checks:
20 \cs_new_protected:Npn \__tag_tree_final_checks:
21 {
22     \int_compare:nNnF {\seq_count:N\g__tag_struct_stack_seq}={1}
23     {
24         \msg_warning:nn {tag}{tree-struct-still-open}
25         \int_step_inline:nnn{2}{\seq_count:N\g__tag_struct_stack_seq}
26         {\tag_struct_end:}
27     }
28     \msg_note:nn {tag}{tree-statistic}
29 }
```

(End of definition for \\_\_tag\_tree\_final\_checks:.)

## 1.2 Catalog: MarkInfo and StructTreeRoot and OpenAction

The StructTreeRoot and the MarkInfo entry must be added to the catalog. If there is an OpenAction entry we must update it, so that it contains also a structure destination. We do it late so that we can win, but before the pdfmanagement hook.

`--tag/struct/1` This is the object for the root object, the StructTreeRoot  
 30 `\pdf_object_new_indexed:nn { __tag/struct }f 1 }`  
*(End of definition for \_\_tag/struct/1.)*

`\g_tag_tree_openaction_struct_t1` We need a variable that indicates which structure is wanted in the OpenAction. By default we use 2 (the Document structure).

31 `\tl_new:N \g_tag_tree_openaction_struct_t1`  
 32 `\tl_gset:Nn \g_tag_tree_openaction_struct_t1 { 2 }`  
*(End of definition for \g\_tag\_tree\_openaction\_struct\_t1.)*

`viewer/startpage (setup-key)` We also need an option to setup the start structure. So we setup a key which sets the variable to the current structure. This still requires hyperref to do most of the job, this should perhaps be changed.

33 `\keys_define:nn { __tag / setup }`  
 34 `{`  
 35  `viewer/startstructure .code:n =`  
 36  `{`  
 37  `\tl_gset:Ne \g_tag_tree_openaction_struct_t1 {#1}`  
 38  `}`  
 39 `, viewer/startstructure .default:n = { \int_use:N \c@g_tag_struct_abs_int }`  
 40 `}`

*(End of definition for viewer/startpage (setup-key). This function is documented on page ??.)*

The OpenAction should only be updated if it is there. So we inspect the Catalog-prop:

41 `\cs_new_protected:Npn \__tag_tree_update_openaction:`  
 42 `{`  
 43  `\prop_get:cNNT`  
 44  `{ \__kernel_pdfdict_name:n { g_pdf_Core/Catalog } }`  
 45  `{OpenAction}`  
 46  `\l__tag_tmpa_t1`  
 47  `{`

we only do something if the OpenAction is an array (as set by hyperref) in other cases we hope that the author knows what they did.

48 `\tl_if_head_eqCharCode:eNT { \tl_trim_spaces:V\l__tag_tmpa_t1 } [ %]`  
 49 `{`  
 50  `\seq_set_split:NnV\l__tag_tmpa_seq{/}\l__tag_tmpa_t1`  
 51  `\pdfmanagement_add:nne {Catalog} { OpenAction }`  
 52  `{`  
 53  `<<`  
 54  `/S/GoTo \c_space_t1`  
 55  `/D~\l__tag_tmpa_t1\c_space_t1`  
 `/SD~[\pdf_object_ref_indexed:nn{__tag/struct}{\g_tag_tree_openaction_struct_t1}]`

there should be always a /Fit etc in the array but better play safe here ...

```

57          \int_compare:nNnTF{ \seq_count:N \l__tag_tmpa_seq } > {1}
58          { /\seq_item:Nn\l__tag_tmpa_seq{2} }
59          { ] }
60          >>
61      }
62      ]
63  }
64 }

65 \hook_gput_code:nnn{shipout/lastpage}{tagpdf}
66 {
67     \bool_if:NT \g__tag_active_tree_bool
68     {
69         \pdfmanagement_add:nnn { Catalog / MarkInfo } { Marked } { true }
70         \pdfmanagement_add:nne
71             { Catalog }
72             { StructTreeRoot }
73             { \pdf_object_ref_indexed:nn { __tag/struct } { 1 } }
74         \__tag_tree_update_openaction:
75     }
76 }
```

### 1.3 Writing the IDtree

The ID are currently quite simple: every structure has an ID build from the prefix ID together with the structure number padded with enough zeros to that we get directly an lexical order. We ship them out in bundles At first a seq to hold the references for the kids

```
\g__tag_tree_id_pad_int
77 \int_new:N\g__tag_tree_id_pad_int
(End of definition for \g__tag_tree_id_pad_int.)
Now we get the needed padding
78 \cs_generate_variant:Nn \tl_count:n {e}
79 \hook_gput_code:nnn{begindocument}{tagpdf}
80 {
81     \int_gset:Nn\g__tag_tree_id_pad_int
82         {\tl_count:e { \__tag_property_ref_lastpage:nn{tagstruct}{1000}}+1}
83 }
84
```

This is the main code to write the tree it basically splits the existing structure numbers in chunks of length 50 TODO consider is 50 is a good length.

```

85 \cs_new_protected:Npn \__tag_tree_write_idtree:
86 {
87     \tl_clear:N \l__tag_tmpa_tl
88     \tl_clear:N \l__tag_tmpb_tl
89     \int_zero:N \l__tag_tmpa_int
90     \int_step_inline:nnn {2} {\c@g__tag_struct_abs_int}
91     {
92         \int_incr:N\l__tag_tmpa_int
93         \tl_put_right:Ne \l__tag_tmpa_tl
```

```

94     {
95         \__tag_struct_get_id:n{##1}~\pdf_object_ref_indexed:nn {\__tag/struct}{##1}~
96     }
97 \int_compare:nNnF {\l__tag_tmpa_int}<{50} %
98 {
99     \pdf_object_unnamed_write:ne {dict}
100    { /Limits~[\__tag_struct_get_id:n{##1-\l__tag_tmpa_int+1}~\__tag_struct_get_id:
101      /Names~[\l__tag_tmpa_t1]
102    }
103    \tl_put_right:Ne\l__tag_tmpb_t1 {\pdf_object_ref_last:\c_space_t1}
104    \int_zero:N \l__tag_tmpa_int
105    \tl_clear:N \l__tag_tmpa_t1
106 }
107 }
108 \tl_if_empty:NF \l__tag_tmpa_t1
109 {
110     \pdf_object_unnamed_write:ne {dict}
111     {
112         /Limits~
113         [\__tag_struct_get_id:n{\c@g__tag_struct_abs_int-\l__tag_tmpa_int+1}~
114           \__tag_struct_get_id:n{\c@g__tag_struct_abs_int}]
115         /Names~[\l__tag_tmpa_t1]
116     }
117     \tl_put_right:Ne\l__tag_tmpb_t1 {\pdf_object_ref_last:}
118 }
119 \pdf_object_unnamed_write:ne {dict}{/Kids~[\l__tag_tmpb_t1]}
120 \__tag_prop_gput:cne
121   { g__tag_struct_1_prop }
122   { IDTree }
123   { \pdf_object_ref_last: }
124 }

```

## 1.4 Writing structure elements

The following commands are needed to write out the structure.

\\_\_tag\_tree\_write\_structtreeroot:

```

125 \cs_new_protected:Npn \__tag_tree_write_structtreeroot:
126 {
127     \__tag_prop_gput:cne
128       { g__tag_struct_1_prop }
129       { ParentTree }
130       { \pdf_object_ref:n { __tag/tree/parenttree } }
131 \__tag_prop_gput:cne
132   { g__tag_struct_1_prop }
133   { RoleMap }
134   { \pdf_object_ref:n { __tag/tree/rolemap } }
135 \__tag_struct_fill_kid_key:n { 1 }
136 \prop_gremove:cn { g__tag_struct_1_prop } {S}
137 \__tag_struct_get_dict_content:nn { 1 } \l__tag_tmpa_t1
138 \pdf_object_write_indexed:nnne
139   { __tag/struct } { 1 }
140   { dict }
141   {

```

```

142           \l__tag_tmpa_t1
143       }
144   }

```

(End of definition for `\_tag_tree_write_structtreeroot::`)

`\_tag_tree_write_structelements:` This writes out the other struct elems, the absolute number is in the counter.

```

145 \cs_new_protected:Npn \_tag_tree_write_structelements:
146   {
147     \int_step_inline:nnnn {2}{1}{\c@g_\_tag_struct_abs_int}
148     {
149       \_tag_struct_write_obj:n { ##1 }
150     }
151   }

```

(End of definition for `\_tag_tree_write_structelements::`)

## 1.5 ParentTree

`\_tag/tree/parenttree` The object which will hold the parenttree

```
152 \pdf_object_new:n { \_tag/tree/parenttree }
```

(End of definition for `\_tag/tree/parenttree.`)

The ParentTree maps numbers to objects or (if the number represents a page) to arrays of objects. The numbers refer to two distinct types of entries: page streams and real objects like annotations. The numbers must be distinct and ordered. So we rely on abspage for the pages and put the real objects at the end. We use a counter to have a chance to get the correct number if code is processed twice.

`\c@g_\_tag_parenttree_obj_int` This is a counter for the real objects. It starts at the absolute last page value. It relies on l3ref.

```

153 \newcounter{g_\_tag_parenttree_obj_int}
154 \hook_gput_code:nnn{\begindocument}{tagpdf}
155   {
156     \int_gset:Nn
157     \c@g_\_tag_parenttree_obj_int
158     { \_tag_property_ref_lastpage:nn{abspage}{100} }
159   }

```

(End of definition for `\c@g_\_tag_parenttree_obj_int.`)

We store the number/object references in a tl-var. If more structure is needed one could switch to a seq.

`\g_\_tag_parenttree_objr_tl`

```
160 \tl_new:N \g_\_tag_parenttree_objr_tl
```

(End of definition for `\g_\_tag_parenttree_objr_tl.`)

`\_tag_parenttree_add_objr:nn` This command stores a StructParent number and a objref into the tl var. This is only for objects like annotations, pages are handled elsewhere.

```

161 \cs_new_protected:Npn \_tag_parenttree_add_objr:nn #1 #2 %#1 StructParent number, #2 objref
162   {
163     \tl_gput_right:Ne \g_\_tag_parenttree_objr_tl
164     {
165       #1 \c_space_t1 #2 ^~J

```

```

166     }
167 }

(End of definition for \__tag_parenttree_add_objr:nn.)
```

\l\_\_tag\_parenttree\_content\_tl A tl-var which will get the page related parenttree content.

```

168 \tl_new:N \l__tag_parenttree_content_tl
```

(End of definition for \l\_\_tag\_parenttree\_content\_tl.)

\\_\_tag\_tree\_fill\_parenttree: This is the main command to assemble the page related entries of the parent tree. It wanders through the pages and the mcid numbers and collects all mcid of one page.

```

169 \cs_new_protected:Npn \__tag_tree_parenttree_rerun_msg: {}
170 \cs_new_protected:Npn \__tag_tree_fill_parenttree:

222     }
223 }
224 }
```

(End of definition for `\__tag_tree_fill_parenttree:..`)

`\__tag_tree_lua_fill_parenttree:` This is a special variant for luatex. lua mode must/can do it differently.

```

225 \cs_new_protected:Npn \__tag_tree_lua_fill_parenttree:
226     {
227         \tl_set:Nn \l__tag_parenttree_content_tl
228         {
229             \lua_now:e
230             {
231                 ltx.__tag.func.output_parenttree
232                 (
233                     \int_use:N\g_shipout_READONLY_int
234                 )
235             }
236         }
237     }
```

(End of definition for `\__tag_tree_lua_fill_parenttree:..`)

`\__tag_tree_write_parenttree:` This combines the two parts and writes out the object. TODO should the check for lua be moved into the backend code?

```

238 \cs_new_protected:Npn \__tag_tree_write_parenttree:
239     {
240         \bool_if:NTF \g__tag_mode_lua_bool
241         {
242             \__tag_tree_lua_fill_parenttree:
243         }
244         {
245             \__tag_tree_fill_parenttree:
246         }
247         \__tag_tree_parenttree_rerun_msg:
248         \tl_put_right:NV \l__tag_parenttree_content_tl\g__tag_parenttree_objr_tl
249         \pdf_object_write:nne { __tag/tree/parenttree }{dict}
250         {
251             /Nums\c_space_t1 [\l__tag_parenttree_content_tl]
252         }
253     }
```

(End of definition for `\__tag_tree_write_parenttree:..`)

## 1.6 Rolemap dictionary

The Rolemap dictionary describes relations between new tags and standard types. The main part here is handled in the role module, here we only define the command which writes it to the PDF.

`__tag/tree/rolemap` At first we reserve again an object. Rolemap is also used in PDF 2.0 as a fallback.

`254 \pdf_object_new:n { __tag/tree/rolemap }`

*(End of definition for \_\_tag/tree/rolemap.)*

`\__tag_tree_write_rolemap:` This writes out the rolemap, basically it simply pushes out the dictionary which has been filled in the role module.

```
255 \cs_new_protected:Npn \__tag_tree_write_rolemap:
256 {
257     \bool_if:NT \g__tag_role_add_mathml_bool
258     {
259         \prop_map_inline:Nn \g__tag_role_NS_mathml_prop
260         {
261             \prop_gput:Nnn \g__tag_role_rolemap_prop {##1}{Span}
262         }
263     }
264     \prop_map_inline:Nn \g__tag_role_rolemap_prop
265     {
266         \tl_if_eq:nnF {##1}{##2}
267         {
268             \pdfdict_gput:nne {g__tag_role/RoleMap_dict}
269             {##1}
270             {\pdf_name_from_unicode:e:n{##2}}
271         }
272     }
273     \pdf_object_write:nne { __tag/tree/rolemap }{dict}
274     {
275         \pdfdict_use:n{g__tag_role/RoleMap_dict}
276     }
277 }
```

*(End of definition for \\_\_tag\_tree\_write\_rolemap:.)*

## 1.7 Classmap dictionary

Classmap and attributes are setup in the struct module, here is only the code to write it out. It should only done if values have been used.

`\__tag_tree_write_classmap:`

```
278 \cs_new_protected:Npn \__tag_tree_write_classmap:
279 {
280     \tl_clear:N \l__tag_tmpa_tl
```

We process the older sec for compatibility with the table code. TODO: check if still needed

```
281     \seq_map_inline:Nn \g__tag_attr_class_used_seq
282     {
283         \prop_gput:Nnn \g__tag_attr_class_used_prop {##1}{}
284     }
285     \prop_map_inline:Nn \g__tag_attr_class_used_prop
```

```

286 {
287   \tl_put_right:Nn \l__tag_tmpa_tl
288   {
289     ##1\c_space_tl
290     <<
291     \prop_item:Nn
292       \g__tag_attr_entries_prop
293       {##1}
294     >>
295     \iow_newline:
296   }
297 }
298 \tl_if_empty:NF
299   \l__tag_tmpa_tl
300   {
301     \pdf_object_new:n { __tag/tree/classmap }
302     \pdf_object_write:nne
303       { __tag/tree/classmap }
304       {dict}
305       { \l__tag_tmpa_tl }
306     \__tag_prop_gput:cne
307       { g__tag_struct_1_prop }
308       { ClassMap }
309       { \pdf_object_ref:n { __tag/tree/classmap } }
310   }
311 }
```

(End of definition for `\__tag_tree_write_classmap..`)

## 1.8 Namespaces

Namespaces are handle in the role module, here is the code to write them out. Namespaces are only relevant for pdf2.0.

```

__tag/tree/namespaces
312 \pdf_object_new:n { __tag/tree/namespaces }

(End of definition for __tag/tree/namespaces.)
```

`\__tag_tree_write_namespaces:`

```

313 \cs_new_protected:Npn \__tag_tree_write_namespaces:
314   {
315     \pdf_version_compare:NnF < {2.0}
316     {
317       \prop_map_inline:Nn \g__tag_role_NS_prop
318       {
319         \pdfdict_if_empty:nF {g__tag_role/RoleMapNS_{##1}_dict}
320         {
321           \pdf_object_write:nne {__tag/RoleMapNS_{##1}}{dict}
322           {
323             \pdfdict_use:n {g__tag_role/RoleMapNS_{##1}_dict}
324           }
325           \pdfdict_gput:nne{g__tag_role/Namespace_{##1}_dict}
326             {RoleMapNS}{\pdf_object_ref:n {__tag/RoleMapNS_{##1}}}
327       }
328 }
```

```

328     \pdf_object_write:nne{tag/NS/##1}{dict}
329     {
330         \pdfdict_use:n {g__tag_role/Namespace_##1_dict}
331     }
332 }
333 \pdf_object_write:nne {\_tag/tree/namespaces}{array}
334 {
335     \prop_map_tokens:Nn \g__tag_role_NS_prop{\use_i:nn}
336 }
337 }
338 }
```

(End of definition for \\_tag\_tree\_write\_namespaces:.)

## 1.9 Finishing the structure

This assembles the various parts. TODO (when tabular are done or if someone requests it): IDTree

```
\_tag_finish_structure:
339 \hook_new:n {tagpdf/finish/before}
340 \cs_new_protected:Npn \_tag_finish_structure:
341 {
342     \bool_if:NT\g__tag_active_tree_bool
343     {
344         \hook_use:n {tagpdf/finish/before}
345         \_tag_tree_final_checks:
346         \iow_term:n{Package~tagpdf~Info:~writing~ParentTree}
347         \_tag_check_benchmark_tic:
348         \_tag_tree_write_parenttree:
349         \_tag_check_benchmark_toc:
350         \iow_term:n{Package~tagpdf~Info:~writing~IDTree}
351         \_tag_check_benchmark_tic:
352         \_tag_tree_write_idtree:
353         \_tag_check_benchmark_toc:
354         \iow_term:n{Package~tagpdf~Info:~writing~RoleMap}

367         \_tag_check_benchmark_tic:
368         \_tag_tree_write_structelements: %this is rather slow!!
369         \_tag_check_benchmark_toc:
370         \iow_term:n{Package~tagpdf~Info:~writing~Root}
371         \_tag_check_benchmark_tic:
372         \_tag_tree_write_structtreeroot:
```

```

373           \_\_tag\_check\_benchmark\_toc:
374       }
375   }
376 
```

(/package)

(End of definition for \\_\\_tag\\_finish\\_structure::)

## 1.10 StructParents entry for Page

We need to add to the Page resources the StructParents entry, this is simply the absolute page number.

```

377 <*package>
378 \hook_gput_code:nnn{begindocument}{tagpdf}
379   {
380     \bool_if:NT\g_\_tag_active_tree_bool
381     {
382       \hook_gput_code:nnn{shipout/before} { tagpdf/structparents }
383       {
384         \pdfmanagement_add:nne
385           { Page }
386           { StructParents }
387           { \int_eval:n { \g_shipout_READONLY_int } }
388       }
389     }
390   }
391 
```

(/package)

## Part IV

# The **tagpdf-mc-shared** module Code related to Marked Content (mc-chunks), code shared by all modes

## Part of the tagpdf package

### 1 Public Commands

---

```
\tag_mc_begin:n \tag_mc_begin:n{\langle key-values\rangle}
\tag_mc_end:   \tag_mc_end:
```

These commands insert the end code of the marked content. They don't end a group and in generic mode it doesn't matter if they are in another group as the starting commands. In generic mode both commands check if they are correctly nested and issue a warning if not.

---

```
\tag_mc_use:n \tag_mc_use:n{\langle label\rangle}
```

These command allow to record a marked content that was stashed away before into the current structure. A marked content can be used only once – the command will issue a warning if an mc is use a second time.

---

```
\tag_mc_artifact_group_begin:n \tag_mc_artifact_group_begin:n {\langle name\rangle}
\tag_mc_artifact_group_end:   \tag_mc_artifact_group_end:
```

New: 2019-11-20

---

This command pair creates a group with an artifact marker at the begin and the end. Inside the group the tagging commands are disabled. It allows to mark a complete region as artifact without having to worry about user commands with tagging commands. `\langle name\rangle` should be a value allowed also for the `artifact` key. It pushes and pops mc-chunks at the begin and end. TODO: document is in tagpdf.tex

---

```
\tag_mc_end_push: \tag_mc_end_push:
\tag_mc_begin_pop:n \tag_mc_begin_pop:n{\langle key-values\rangle}
```

New: 2021-04-22 If there is an open mc chunk, `\tag_mc_end_push:` ends it and pushes its tag of the (global) stack. If there is no open chunk, it puts `-1` on the stack (for debugging) `\tag_mc_begin_pop:n` removes a value from the stack. If it is different from `-1` it opens a tag with it. The reopened mc chunk loses info like the alt text for now.

---

```
\tag_mc_if_in_p: * \tag_mc_if_in:TF {\langle true code\rangle} {\langle false code\rangle}
\tag_mc_if_in:TF * Determines if a mc-chunk is open.
```

---

```
\tag_mc_reset_box:N ∗ \tag_mc_reset_box:N {⟨box⟩}
```

---

New: 2023-06-11 This resets in lua mode the mc attributes to the one currently in use. It does nothing in generic mode.

## 2 Public keys

The following keys can be used with `\tag_mc_begin:n`, `\tagmcbegin`, `\tag_mc_begin_pop:n`,

---

**tag<sub>l</sub>(mc-key)** This key is required, unless artifact is used. The value is a tag like P or H1 without a slash at the begin, this is added by the code. It is possible to setup new tags. The value of the key is expanded, so it can be a command. The expansion is passed unchanged to the PDF, so it should with a starting slash give a valid PDF name (some ascii with numbers like H4 is fine).

---

**artifact<sub>l</sub>(mc-key)** This will setup the marked content as an artifact. The key should be used for content that should be ignored. The key can take one of the values `pagination`, `layout`, `page`, `background` and `notype` (this is the default).

---

**raw<sub>l</sub>(mc-key)** This key allows to add more entries to the properties dictionary. The value must be correct, low-level PDF. E.g. `raw=/Alt (Hello)` will insert an alternative Text.

---

**alt<sub>l</sub>(mc-key)** This key inserts an `/Alt` value in the property dictionary of the BDC operator. The value is handled as verbatim string, commands are not expanded. The value will be expanded first once. If it is empty, nothing will happen.

---

**actualtext<sub>l</sub>(mc-key)** This key inserts an `/ActualText` value in the property dictionary of the BDC operator. The value is handled as verbatim string, commands are not expanded. The value will be expanded first once. If it is empty, nothing will happen.

---

**label<sub>l</sub>(mc-key)** This key sets a label by which one can call the marked content later in another structure (if it has been stashed with the `stash` key). Internally the label name will start with `tagpdf-`.

---

**stash<sub>l</sub>(mc-key)** This “stashes” an mc-chunk: it is not inserted into the current structure. It should be normally be used along with a label to be able to use the mc-chunk in another place.

The code is splitted into three parts: code shared by all engines, code specific to luamode and code not used by luamode.

### 3 Marked content code – shared

```

1 <@@=tag>
2 <*header>
3 \ProvidesExplPackage {tagpdf-mc-code-shared} {2024-04-12} {0.99b}
4   {part of tagpdf - code related to marking chunks -
5   code shared by generic and luamode }
6 </header>
```

#### 3.1 Variables and counters

MC chunks must be counted. I use a latex counter for the absolute count, so that it is added to `\cl@@ckpt` and restored e.g. in tabulars and align. `\int_new:N \c@g_@@_MCID_abs_int` and `\tl_put_right:Nn \cl@@ckpt{\@elt{g_@@_MCID_abs_int}}` would work too, but as the name is not expl3 then too, why bother? The absolute counter can be used to label and to check if the page counter needs a reset.

```

g__tag_MCID_abs_int
7 <*base>
8 \newcounter { g__tag_MCID_abs_int }
```

(End of definition for `g__tag_MCID_abs_int`.)

`\__tag_get_data_mc_counter:`: This command allows `\tag_get:n` to get the current state of the mc counter with the keyword `mc_counter`. By comparing the numbers it can be used to check the number of structure commands in a piece of code.

```

9 \cs_new:Npn \__tag_get_data_mc_counter:
10 {
11   \int_use:N \c@g__tag_MCID_abs_int
12 }
13 </base>
```

(End of definition for `\__tag_get_data_mc_counter`.)

`\__tag_get_mc_abs_cnt:`: A (expandable) function to get the current value of the cnt. TODO: duplicate of the previous one, this should be cleaned up.

```

14 <*shared>
15 \cs_new:Npn \__tag_get_mc_abs_cnt: { \int_use:N \c@g__tag_MCID_abs_int }
```

(End of definition for `\__tag_get_mc_abs_cnt`.)

`\g__tag_in_mc_bool`: This booleans record if a mc is open, to test nesting.

```
16 \bool_new:N \g__tag_in_mc_bool
```

(End of definition for `\g__tag_in_mc_bool`.)

`\g__tag_mc_parenttree_prop`: For every chunk we need to know the structure it is in, to record this in the parent tree. We store this in a property.

key: absolute number of the mc (tagmcabs)

value: the structure number the mc is in

```
17 \__tag_prop_new_linked:N \g__tag_mc_parenttree_prop
```

(End of definition for `\g__tag_mc_parenttree_prop`.)

\g\\_tag\\_mc\\_parenttree\\_prop Some commands (e.g. links) want to close a previous mc and reopen it after they did their work. For this we create a stack:

- 18 \seq\_new:N \g\\_tag\\_mc\\_stack\\_seq

(End of definition for \g\\_tag\\_mc\\_parenttree\\_prop.)

\l\\_tag\\_mc\\_artifact\\_type\\_tl Artifacts can have various types like Pagination or Layout. This stored in this variable.

- 19 \tl\_new:N \l\\_tag\\_mc\\_artifact\\_type\\_tl

(End of definition for \l\\_tag\\_mc\\_artifact\\_type\\_tl.)

\l\\_tag\\_mc\\_key\\_stash\\_bool \l\\_tag\\_mc\\_artifact\\_bool This booleans store the stash and artifact status of the mc-chunk.

- 20 \bool\_new:N \l\\_tag\\_mc\\_key\\_stash\\_bool
- 21 \bool\_new:N \l\\_tag\\_mc\\_artifact\\_bool

(End of definition for \l\\_tag\\_mc\\_key\\_stash\\_bool and \l\\_tag\\_mc\\_artifact\\_bool.)

\l\\_tag\\_mc\\_key\\_tag\\_tl \g\\_tag\\_mc\\_key\\_tag\\_tl \l\\_tag\\_mc\\_key\\_label\\_tl \l\\_tag\\_mc\\_key\\_properties\\_tl Variables used by the keys. \l\\_@@\\_mc\\_key\\_properties\\_tl will collect a number of values. TODO: should this be a pdfdict now?

- 22 \tl\_new:N \l\\_tag\\_mc\\_key\\_tag\\_tl
- 23 \tl\_new:N \g\\_tag\\_mc\\_key\\_tag\\_tl
- 24 \tl\_new:N \l\\_tag\\_mc\\_key\\_label\\_tl
- 25 \tl\_new:N \l\\_tag\\_mc\\_key\\_properties\\_tl

(End of definition for \l\\_tag\\_mc\\_key\\_tag\\_tl and others.)

### 3.2 Functions

\\_\\_tag\\_mc\\_handle\\_mc\\_label:e The commands labels a mc-chunk. It is used if the user explicitly labels the mc-chunk with the `label` key. The argument is the value provided by the user. It stores the attributes

`tagabspage`: the absolute page, `\g\_shipout\_readonly\_int`,  
`tagmcabs`: the absolute mc-counter `\c@g_@@_MCID_abs_int`. The reference command is based on l3ref.

- 26 \cs\_new:Npn \\_\\_tag\\_mc\\_handle\\_mc\\_label:e #1
- 27 {
- 28 \\_\\_tag\\_property\\_record:en{tagpdf-#1}{tagabspage,tagmcabs}
- 29 }

(End of definition for \\_\\_tag\\_mc\\_handle\\_mc\\_label:e.)

\\_\\_tag\\_mc\\_set\\_label\\_used:n Unlike with structures we can't check if a labeled mc has been used by looking at the P key, so we use a dedicated csname for the test

- 30 \cs\_new\_protected:Npn \\_\\_tag\\_mc\\_set\\_label\\_used:n #1 %#1 labelname
- 31 {
- 32 \tl\_new:c { g\\_tag\\_mc\\_label\\_tl\_to\\_str:n{#1}\_used\\_tl }
- 33 }
- 34

(End of definition for \\_\\_tag\\_mc\\_set\\_label\\_used:n.)

**\tag\_mc\_use:n**

These command allow to record a marked content that was stashed away before into the current structure. A marked content can be used only once – the command will issue a warning if an mc is use a second time. The argument is a label name set with the `label` key.

TODO: is testing for struct the right test?

```

35 <base>\cs_new_protected:Npn \tag_mc_use:n #1 { \__tag_whatsits: }
36 <*shared>
37 \cs_set_protected:Npn \tag_mc_use:n #1 %#1: label name
38 {
39     \__tag_check_if_active_struct:T
40     {
41         \tl_set:Ne \l__tag_tmpa_tl { \__tag_property_ref:nnn{tagpdf-#1}{tagmcabs}{} }
42         \tl_if_empty:NTF\l__tag_tmpa_tl
43         {
44             \msg_warning:nnn {tag} {mc-label-unknown} {#1}
45         }
46         {
47             \cs_if_free:cTF { g__tag_mc_label_\tl_to_str:n{#1}_used_tl }
48             {
49                 \__tag_mc_handle_stash:e { \l__tag_tmpa_tl }
50                 \__tag_mc_set_label_used:n {#1}
51             }
52             {
53                 \msg_warning:nnn {tag} {mc-used-twice} {#1}
54             }
55         }
56     }
57 }
58 </shared>
```

(End of definition for `\tag_mc_use:n`. This function is documented on page 70.)

**\tag\_mc\_artifact\_group\_begin:n****\tag\_mc\_artifact\_group\_end:**

This opens an artifact of the type given in the argument, and then stops all tagging. It creates a group. It pushes and pops mc-chunks at the begin and end.

```

59 <base>\cs_new_protected:Npn \tag_mc_artifact_group_begin:n #1 {}
60 <base>\cs_new_protected:Npn \tag_mc_artifact_group_end:{} 
61 <*shared>
62 \cs_set_protected:Npn \tag_mc_artifact_group_begin:n #1
63 {
64     \tag_mc_end_push:
65     \tag_mc_begin:n {artifact=#1}
66     \group_begin:
67     \tag_stop:n{artifact-group}
68 }
69
70 \cs_set_protected:Npn \tag_mc_artifact_group_end:
71 {
72     \tag_start:n{artifact-group}
73     \group_end:
74     \tag_mc_end:
75     \tag_mc_begin_pop:n{}
76 }
77 </shared>
```

(End of definition for `\tag_mc_artifact_group_begin:n` and `\tag_mc_artifact_group_end:`. These functions are documented on page 70.)

`\tag_mc_reset_box:N` This allows to reset the mc-attributes in box. On base and generic mode it should do nothing.

```
78 〈base〉\cs_new_protected:Npn \tag_mc_reset_box:N #1 {}
```

(End of definition for `\tag_mc_reset_box:N`. This function is documented on page 71.)

```
\tag_mc_end_push:
\tag_mc_begin_pop:n
79 〈base〉\cs_new_protected:Npn \tag_mc_end_push: {}
```

- 80 〈base〉\cs\_new\_protected:Npn \tag\_mc\_begin\_pop:n #1 {}
- 81 〈\*shared〉
- 82 \cs\_set\_protected:Npn \tag\_mc\_end\_push:
 {
 \\_\_tag\_check\_if\_active\_mc:T
 {
 \\_\_tag\_mc\_if\_in:TF
 {

 {
 \\_\_tag\_check\_mc\_pushed\_popped:nn {popped}{-1}
 }
 {
 \\_\_tag\_check\_mc\_pushed\_popped:nn {popped}{\l\_\_tag\_tmpa\_t1}
 \tag\_mc\_begin:n {tag=\l\_\_tag\_tmpa\_t1,#1}
 }
 }
 }
 {
 \\_\_tag\_check\_mc\_pushed\_popped:nn {popped}{empty~stack,~nothing}
 }
 }
 }
- 120 }

(End of definition for `\tag_mc_end_push:` and `\tag_mc_begin_pop:n`. These functions are documented on page 70.)

### 3.3 Keys

This are the keys where the code can be shared between the modes.

```
stash_{mc-key}  
__artifact-bool  
__artifact-type
```

the two internal artifact keys are use to define the public `artifact`. For now we add support for the subtypes Header and Footer. Watermark,PageNum, LineNum,Redaction,Bates will be added if some use case emerges. If some use case for /BBox and /Attached emerges, it will be perhaps necessary to adapt the code.

```
121 \keys_define:nn { __tag / mc }
122   {
123     stash           .bool_set:N    = \l__tag_mc_key_stash_bool,
124     __artifact-bool .bool_set:N    = \l__tag_mc_artifact_bool,
125     __artifact-type .choice:,    =
126     __artifact-type / pagination .code:n    =
127     {
128       \tl_set:Nn \l__tag_mc_artifact_type_tl { Pagination }
129     },
130     __artifact-type / pagination/header .code:n    =
131     {
132       \tl_set:Nn \l__tag_mc_artifact_type_tl { Pagination/Subtype/Header }
133     },
134     __artifact-type / pagination/footer .code:n    =
135     {
136       \tl_set:Nn \l__tag_mc_artifact_type_tl { Pagination/Subtype/Footer }
137     },
138     __artifact-type / layout      .code:n    =
139     {
140       \tl_set:Nn \l__tag_mc_artifact_type_tl { Layout }
141     },
142     __artifact-type / page       .code:n    =
143     {
144       \tl_set:Nn \l__tag_mc_artifact_type_tl { Page }
145     },
146     __artifact-type / background .code:n    =
147     {
148       \tl_set:Nn \l__tag_mc_artifact_type_tl { Background }
149     },
150     __artifact-type / notype     .code:n    =
151     {
152       \tl_set:Nn \l__tag_mc_artifact_type_tl {}
153     },
154     __artifact-type /           .code:n    =
155     {
156       \tl_set:Nn \l__tag_mc_artifact_type_tl {}
157     },
158 }
```

(End of definition for `stash` (`mc-key`), `__artifact-bool`, and `__artifact-type`. This function is documented on page 71.)

```
159 
```

## Part V

# The **tagpdf-mc-generic** module

## Code related to Marked Content (mc-chunks), generic mode

### Part of the tagpdf package

## 1 Marked content code – generic mode

```
1 <@@=tag>
2 <*generic>
3 \ProvidesExplPackage {tagpdf-mc-code-generic} {2024-04-12} {0.99b}
4 {part of tagpdf - code related to marking chunks - generic mode}
5 </generic>
6 <*debug>
7 \ProvidesExplPackage {tagpdf-debug-generic} {2024-04-12} {0.99b}
8 {part of tagpdf - debugging code related to marking chunks - generic mode}
9 </debug>
```

### 1.1 Variables

```
10 <*generic>
```

\l\_\_tag\_mc\_ref\_abspage\_tl We need a ref-label system to ensure that the MCID cnt restarts at 0 on a new page. This will be used to store the tagabspage attribute retrieved from a label.

```
11 \tl_new:N \l__tag_mc_ref_abspage_tl
```

(End of definition for \l\_\_tag\_mc\_ref\_abspage\_tl.)

\l\_\_tag\_mc\_tmpa\_tl temporary variable

```
12 \tl_new:N \l__tag_mc_tmpa_tl
```

(End of definition for \l\_\_tag\_mc\_tmpa\_tl.)

\g\_\_tag\_mc\_marks a marks register to keep track of the mc's at page breaks and a sequence to keep track of the data for the continuation extra-tmb. We probably will need to track mc-marks in more than one stream, so the seq contains the name of the stream.

```
13 \newmarks \g__tag_mc_marks
```

(End of definition for \g\_\_tag\_mc\_marks.)

\g\_\_tag\_mc\_main\_marks\_seq \g\_\_tag\_mc\_footnote\_marks\_seq \g\_\_tag\_mc\_multicol\_marks\_seq Each stream has an associated global seq variable holding the bottom marks from the/a previous chunk in the stream. We provide three by default: main, footnote and multicol. TODO: perhaps an interface for more streams will be needed.

```
14 \seq_new:N \g__tag_mc_main_marks_seq
15 \seq_new:N \g__tag_mc_footnote_marks_seq
16 \seq_new:N \g__tag_mc_multicol_marks_seq
```

(End of definition for \g\_\_tag\_mc\_main\_marks\_seq, \g\_\_tag\_mc\_footnote\_marks\_seq, and \g\_\_tag\_mc\_multicol\_marks\_seq.)

```
\l__tag_mc_firstmarks_seq
\l__tag_mc_botmarks_seq
```

The marks content contains a number of data which we will have to access and compare, so we will store it locally in two sequences. topmarks is unusable in LaTeX so we ignore it.

```
17 \seq_new:N \l__tag_mc_firstmarks_seq
18 \seq_new:N \l__tag_mc_botmarks_seq
```

(End of definition for `\l__tag_mc_firstmarks_seq` and `\l__tag_mc_botmarks_seq`.)

## 1.2 Functions

```
\__tag_mc_begin_marks:nn
\__tag_mc_artifact_begin_marks:n
\__tag_mc_end_marks:
```

Generic mode need to set marks for the page break and split stream handling. We always set two marks to be able to detect the case when no mark is on a page/galley. MC-begin commands will set (b,-,data) and (b,+,data), MC-end commands will set (e,-,data) and (e,+,data).

```
19 \cs_new_protected:Npn \__tag_mc_begin_marks:nn #1 #2 %#1 tag, #2 label

98     }
99     \prop_gput:Nee \g__tag_mc_parenttree_prop
100    {\#2}
101    {\#3}
102 }
103 \cs_generate_variant:Nn \__tag_mc_store:nnn {eee}

(End of definition for \__tag_mc_store:nnn.)

```

`\__tag_mc_insert_extra_tmb:n` These two functions should be used in the output routine at the place where a mc-literal could be missing due to a page break or some other split. They check (with the help of the marks) if a extra-tmb or extra-tme is needed. The tmb command stores also the mc into the structure, the tme has to store the data for a following extra-tmb. The argument takes a stream name like main or footnote to allow different handling there. The content of the marks must be stored before (with `\@@_mc_get_marks:` or manually) into `\l_@@_mc_firstmarks_seq` and `\l_@@_mc_botmarks_seq` so that the tests can use them.

```

104 \cs_new_protected:Npn \__tag_mc_insert_extra_tmb:n #1 % #1 stream: e.g. main or footnote

```

(End of definition for `\__tag_mc_insert_extra_tmb:n` and `\__tag_mc_insert_extra_tme:n`.)

### 1.3 Looking at MC marks in boxes

`\__tag_add_missing_mcs:Nn` Assumptions:

- test for tagging active outside;
- mark retrieval also outside.

This takes a box register as its first argument (or the register number in a count register, as used by `multicol`). It adds an extra tmb at the top of the box if necessary and similarly an extra tme at the end. This is done by adding hboxes in a way that the positioning and the baseline of the given box is not altered. The result is written back to the box.

The second argument is the stream this box belongs to and is currently either `main` for the main galley, `footnote` for footnote note text, or `multicol` for boxes produced for columns in that environment. Other streams may follow over time.

```

163 \cs_new_protected:Npn \__tag_add_missing_mcs:Nn #1 #2 {
164   \vbadness \OM
165   \vfuzz \c_max_dim
166   \vbox_set_to_ht:Nnn #1 { \box_ht:N #1 } {
167     \hbox_set:Nn \l__tag_tmpa_box { \__tag_mc_insert_extra_tmb:n {#2} }
168     \hbox_set:Nn \l__tag_tmpb_box { \__tag_mc_insert_extra_tme:n {#2} }
169     \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
170   }

```

```

171           \seq_log:c { g__tag_mc_#2_marks_seq}
172       }

```

The box placed on the top gets zero size and thus will not affect the box dimensions of the box we are modifying.

```

173   \box_set_ht:Nn \l__tag_tmpa_box \c_zero_dim
174   \box_set_dp:Nn \l__tag_tmpa_box \c_zero_dim

```

The box added at the bottom will get the depth of the original box. This way we can arrange that from the outside everything looks as before.

```

175   \box_set_ht:Nn \l__tag_tmpb_box \c_zero_dim
176   \box_set_dp:Nn \l__tag_tmpb_box { \box_dp:N #1 }

```

We need to set `\boxmaxdepth` in case the original box has an unusually large depth, otherwise that depth is not preserved when we string things together.

```

177   \boxmaxdepth \cmaxdepth
178   \box_use_drop:N      \l__tag_ttmpa_box
179   \vbox_unpack_drop:N  #1

```

Back up by the depth of the box as we add that later again.

```
180   \tex_kern:D -\box_dp:N \l__tag_ttmpb_box
```

And we don't want any glue added when we add the box.

```

181   \nointerlineskip
182   \box_use_drop:N \l__tag_ttmpb_box
183   }
184 }

```

(End of definition for `\_\_tag\_add\_missing\_mcs:Nn`.)

`\_\_tag\_add\_missing\_mcs\_to\_stream:Nn`

This is the main command to add mc to the stream. It is therefore guarded by the mc-boolean.

If we aren't in the main stream then processing is a bit more complicated because to get at the marks in the box we need to artificially split it and then look at the split marks.

First argument is the box to update and the second is the "stream". In lua mode the command is a no-op.

```

185 \cs_new_protected:Npn \_\_tag\_add\_missing\_mcs\_to\_stream:Nn #1#2
186   {
187     \_\_tag\_check\_if\_active\_mc:T {

```

First set up a temp box for trial splitting.

```

188   \vbadness\maxdimen
189   \box_set_eq:NN \l__tag_tmpa_box #1

```

Split the box to the largest size available. This should give us all content (but to be sure that there is no issue we could test out test box is empty now (not done).

```
190   \vbox_set_split_to_ht:NNn \l__tag_tmpa_box \l__tag_tmpa_box \c_max_dim
```

As a side effect of this split we should now have the first and bottom split marks set up. We use this to set up `\l__tag_mc_firstmarks_seq`

```

191   \exp_args:NNe
192   \seq_set_from_clist:Nn \l__tag_mc_firstmarks_seq
193   { \tex_splitfirstmarks:D \g__tag_mc_marks }

```

Some debugging info:

```
194 %     \iow_term:n { First~ mark~ from~ this~ box: }
195 %     \seq_log:N \l__tag_mc_firstmarks_seq
```

If this mark was empty then clearly the bottom mark will too be empty. Thus in this case we make use of the saved bot mark from the previous chunk. Note that if this is the first chunk in the stream the global seq would contain a random value, but then we can't end in this branch because the basis assumption is that streams are properly marked up so the first chunk would always have a mark at the beginning!

```
196     \seq_if_empty:NTF \l__tag_mc_firstmarks_seq
197     {
198         \__tag_check_typeout_v:n
199         {
200             No~ marks~ so~ use~ saved~ bot~ mark:-
201             \seq_use:cn {g__tag_mc_#2_marks_seq} {,~} \iow_newline:
202         }
203         \seq_set_eq:Nc \l__tag_mc_firstmarks_seq {g__tag_mc_#2_marks_seq}
```

We also update the bot mark to the same value so that we can later apply `\__tag_add_missing_mcs:Nn` with the data structures in place (see assumptions made there).

```
204     \seq_set_eq:NN \l__tag_mc_botmarks_seq \l__tag_mc_firstmarks_seq
205 }
```

If there was a first mark then there is also a bot mark (and it can't be the same as our marks always come in pairs). So if that branch is chosen we update `\l__tag_mc_botmarks_seq` from the bot mark.

```
206     {
207         \__tag_check_typeout_v:n
208         {
209             Pick~ up~ new~ bot~ mark!
210         }
211         \exp_args:NNe
212         \seq_set_from_clist:Nn \l__tag_mc_botmarks_seq
213         { \tex_splitbotmarks:D \g__tag_mc_marks }
214     }
```

Finally we call `\__tag_add_missing_mcs:Nn` to add any missing tmb/tme as needed,

```
215     \__tag_add_missing_mcs:Nn #1 {#2}
216     %% \seq_gset_eq:cN {g__tag_mc_#2_marks_seq} \l__tag_mc_botmarks_seq
217     %% }
218     %
219   }
220 }
```

*(End of definition for `\__tag_add_missing_mcs_to_stream:Nn`.)*

`\__tag_mc_if_in_p:` This is a test if a mc is open or not. It depends simply on a global boolean: mc-chunks are added linearly so nesting should not be relevant.

`\tag_mc_if_in_p:` One exception are header and footer (perhaps they are more, but for now it doesn't seem so, so there are no dedicated code to handle this situation): When they are built and added to the page we could be both inside or outside a mc-chunk. But header and footer should ignore this and not push/pop or warn about nested mc. It is therefore important there to set and reset the boolean manually. See the tagpddocu-patches.sty for an example.

```

221 \prg_new_conditional:Nnn \__tag_mc_if_in: {p,T,F,TF}
222 {
223     \bool_if:NTF \g__tag_in_mc_bool
224     { \prg_return_true: }
225     { \prg_return_false: }
226 }
227
228 \prg_new_eq_conditional:NNn \tag_mc_if_in: \__tag_mc_if_in: {p,T,F,TF}

```

(End of definition for `\__tag_mc_if_in:TF` and `\tag_mc_if_in:TF`. This function is documented on page 70.)

`\__tag_mc_bmc:n`  
`\__tag_mc_emc:`  
`\__tag_mc_bdc:nn`

These are the low-level commands. There are now equal to the pdfmanagement commands generic mode, but we use an indirection in case luamode need something else. change 04.08.2018: the commands do not check the validity of the arguments or try to escape them, this should be done before using them. change 2023-08-18: we are delaying the writing to the shipout.

```

229 % #1 tag, #2 properties
230 \cs_set_eq:NN \__tag_mc_bmc:n \pdf_bmc:n
231 \cs_set_eq:NN \__tag_mc_emc: \pdf_emc:
232 \cs_set_eq:NN \__tag_mc_bdc:nn \pdf_bdc:nn
233 \cs_set_eq:NN \__tag_mc_bdc_shipout:ee \pdf_bdc_shipout:ee

```

(End of definition for `\__tag_mc_bmc:n`, `\__tag_mc_emc:`, and `\__tag_mc_bdc:nn`.)

`\__tag_mc_bdc_mcid:nn`  
`\__tag_mc_bdc_mcid:n`  
`\__tag_mc_handle_mcid:nn`  
`\__tag_mc_handle_mcid:VV`

This create a BDC mark with an /MCID key. Most of the work here is to get the current number value for the MCID: they must be numbered by page starting with 0 and then successively. The first argument is the tag, e.g. P or Span, the second is used to pass more properties. Starting with texlive 2023 this is much simpler and faster as we can use delay the numbering to the shipout. We also define a wrapper around the low-level command as luamode will need something different.

```

234 \bool_if:NTF\g__tag_delayed_shipout_bool

(End of definition for `\__tag_mc_bdc_mcid:nn`, `\__tag_mc_bdc_mcid:n`, and `\__tag_mc_handle_mcid:nn`.)

`\__tag_mc_handle_stash:n`  
`\__tag_mc_handle_stash:e`

This is the handler which puts a mc into the the current structure. The argument is the number of the mc. Beside storing the mc into the structure, it also has to record the structure for the parent tree. The name is a bit confusing, it does *not* handle mc with the stash key .... TODO: why does luamode use it for begin + use, but generic mode only for begin?

```

322 \cs_new_protected:Npn \__tag_mc_handle_stash:n #1 %1 mcidnum
323 {
324     \__tag_check_mc_used:n {#1}

## 1.4 Keys

Definitions are different in luamode. `tag` and `raw` are expanded as \lua\_now:e in lua does it too and we assume that their values are safe.

```

tag_(mc-key)
raw_(mc-key)
453 (*generic)
alt_(mc-key) \keys_define:nn { __tag / mc }
actualtext_(mc-key) {
455   tag .code:n = % the name (H,P,Span) etc
label_(mc-key) {
456   raw .code:n =
457   {
458     \tl_set:Ne \l__tag_mc_key_tag_tl { #1 }
459     \tl_gset:Ne \g__tag_mc_key_tag_tl { #1 }
460   },
461   alt .code:n      = % Alt property
462   {
463     \str_set_convert:Noon
464     \l__tag_tmpa_str
465     { #1 }
466     { default }
467     { utf16/hex }
468     \tl_put_right:Nn \l__tag_mc_key_properties_tl { /Alt-< }
469     \tl_put_right:No \l__tag_mc_key_properties_tl { \l__tag_tmpa_str>~ }
470   },
471   alttext .meta:n = {alt=#1},
472   actualtext .code:n      = % ActualText property
473   {
474     \tl_if_empty:oF{#1}
475     {
476       \str_set_convert:Noon
477       \l__tag_tmpa_str
478       { #1 }
479       { default }
480       { utf16/hex }
481       \tl_put_right:Nn \l__tag_mc_key_properties_tl { /ActualText-< }
482       \tl_put_right:No \l__tag_mc_key_properties_tl { \l__tag_tmpa_str>~ }
483     }
484   }
485 }
```

```

488     },
489     label .tl_set:N      = \l__tag_mc_key_label_tl,
490     artifact .code:n     =
491     {
492       \exp_args:Nne
493       \keys_set:nn
494         { __tag / mc }
495         { __artifact-bool, __artifact-type=#1 }
496     },
497     artifact .default:n   = {notype}
498   }
499 
```

(End of definition for `tag (mc-key)` and others. These functions are documented on page 71.)

## Part VI

# The **tagpdf-mc-luamode** module Code related to Marked Content (mc-chunks), luamode-specific Part of the tagpdf package

The code is splitted into three parts: code shared by all engines, code specific to luamode and code not used by luamode.

## 1 Marked content code – luamode code

luamode uses attributes to mark mc-chunks. The two attributes used are defined in the backend file. The backend also load the lua file, as it can contain functions needed elsewhere. The attributes for mc are global (between 0.6 and 0.81 they were local but this was reverted). The attributes are setup only in lua, and one should use the lua functions to set and get them.

`g_@@_mc_type_attr`: the value represent the type

`g_@@_mc_cnt_attr`: will hold the `\c@g_@@_MCID_abs_int` value

Handling attribute needs a different system to number the page wise mcid's: a `\tagmcbegin ... \tagmcend` pair no longer surrounds exactly one mc chunk: it can be split at page breaks. We know the included mcid(s) only after the ship out. So for the `struct -> mcid` mapping we need to record `struct -> mc-cnt` (in `\g_@@_mc_parenttree_prop` and/or a lua table and at shipout `mc-cnt-> {mcid, mcid, ...}`) and when building the trees connect both.

Key definitions are overwritten for luatex to store that data in lua-tables. The data for the mc are in `ltx.@@.mc[absnum]`. The fields of the table are:

`tag`: the type (a string)

`raw`: more properties (string)

`label`: a string.

`artifact`: the presence indicates an artifact, the value (string) is the type.

`kids`: a array of tables

`{1={kid=num2,page=pagenum1}, 2={kid=num2,page=pagenum2},...},`

this describes the chunks the mc has been split to by the traversing code

`parent`: the number of the structure it is in. Needed to build the parent tree.

```
1 <@=tag>
2 <*luamode>
3 \ProvidesExplPackage {tagpdf-mc-code-lua} {2024-04-12} {0.99b}
4   {tagpdf - mc code only for the luamode }
5 </luamode>
6 <*debug>
7 \ProvidesExplPackage {tagpdf-debug-lua} {2024-04-12} {0.99b}
8   {part of tagpdf - debugging code related to marking chunks - lua mode}
9 </debug>
```

The main function which wanders through the shipout box to inject the literals. if the new callback is there, it is used.

```

```

## 1.1 Commands

`\_tag\_add_missing_mcs_to_stream:Nn`

This command is used in the output routine by the ptagging code. It should do nothing in luamode.

```
65 \cs_new_protected:Npn \_tag_add_missing_mcs_to_stream:Nn #1#2 {}
```

(End of definition for `\_tag\_add_missing_mcs_to_stream:Nn`.)

`\_tag_mc_if_in_p:` This tests, if we are in an mc, for attributes this means to check against a number.

`\_tag_mc_if_in:TF`

```

66 \prg_new_conditional:Nnn \_tag_mc_if_in: {p,T,F,TF}
67 {
68     \int_compare:nNnTF
69     { -2147483647 }
70     =
71     {\lua_now:e
72     {
73         \tex.print(\int_use:N \c_document_cctab, \tex.getattribute(luatexbase.attributes.g_...)
74     }
75 }
76 { \prg_return_false: }
77 { \prg_return_true: }
78 }
79
80 \prg_new_eq_conditional:NNn \tag_mc_if_in: \_tag_mc_if_in: {p,T,F,TF}
```

(End of definition for `\_tag_mc_if_in:TF` and `\tag_mc_if_in:TF`. This function is documented on page 70.)

`\_tag_mc_lua_set_mc_type_attr:n`

`\_tag_mc_lua_set_mc_type_attr:o`

`\_tag_mc_lua_unset_mc_type_attr:`

This takes a tag name, and sets the attributes globally to the related number.

```

81 \cs_new:Nn \_tag_mc_lua_set_mc_type_attr:n % #1 is a tag name
82 {
83     %TODO ltx._tag.func.get_num_from("#1") seems not to return a suitable number??
84     \tl_set:N\l__tag_tmpa_tl{\lua_now:e{ltx._tag.func.output_num_from ("#1")}}
85     \lua_now:e
86     {
87         \tex.setattribute
88         (
89             "global",
90             luatexbase.attributes.g__tag_mc_type_attr,
91             \l__tag_tmpa_tl
92         )
93     }
94     \lua_now:e
95     {
96         \tex.setattribute
97         (
98             "global",
99             luatexbase.attributes.g__tag_mc_cnt_attr,
100            \_tag_get_mc_abs_cnt:
101        )
102 }
```

```

102         }
103     }
104
105 \cs_generate_variant:Nn\__tag_mc_lua_set_mc_type_attr:n { o }
106
107 \cs_new:Nn \__tag_mc_lua_unset_mc_type_attr:
108 {
109     \lua_now:e
110     {
111         tex.setattribute
112         (
113             "global",
114             luatexbase.attributes.g__tag_mc_type_attr,
115             -2147483647
116         )
117     }
118 \lua_now:e
119     {
120         tex.setattribute
121         (
122             "global",
123             luatexbase.attributes.g__tag_mc_cnt_attr,
124             -2147483647
125         )
126     }
127 }
128

```

*(End of definition for \\_\_tag\_mc\_lua\_set\_mc\_type\_attr:n and \\_\_tag\_mc\_lua\_unset\_mc\_type\_attr:.)*

\\_\_tag\_mc\_insert\_mcid\_kids:n  
\\_\_tag\_mc\_insert\_mcid\_single\_kids:n

These commands will in the finish code replace the dummy for a mc by the real mcid kids we need a variant for the case that it is the only kid, to get the array right

```

129 \cs_new:Nn \__tag_mc_insert_mcid_kids:n
130 {
131     \lua_now:e { ltx.__tag.func.mc_insert_kids (#1,0) }
132 }
133
134 \cs_new:Nn \__tag_mc_insert_mcid_single_kids:n
135 {
136     \lua_now:e {ltx.__tag.func.mc_insert_kids (#1,1) }
137 }

```

*(End of definition for \\_\_tag\_mc\_insert\_mcid\_kids:n and \\_\_tag\_mc\_insert\_mcid\_single\_kids:n.)*

\\_\_tag\_mc\_handle\_stash:n  
\\_\_tag\_mc\_handle\_stash:e

This is the lua variant for the command to put an mcid absolute number in the current structure.

```

138 </luamode>
139 <*luamode| debug>
140 <luamode>\cs_new_protected:Npn \__tag_mc_handle_stash:n #1 %1 mcidnum
141 <debug>\cs_set_protected:Npn \__tag_mc_handle_stash:n #1 %1 mcidnum
142 {
143     \__tag_check_mc_used:n { #1 }
144     \seq_gput_right:cn % Don't fill a lua table due to the command in the item,
145                           % so use the kernel command

```

```

146      { g__tag_struct_kids_\g__tag_struct_stack_current_tl _seq }
147      {
148          \__tag_mc_insert_mcid_kids:n {#1}%
149      }
150 \debug \seq_gput_right:cn % Don't fill a lua table due to the command in the item,
151 \debug % so use the kernel command
152 \debug { g__tag_struct_debug_kids_\g__tag_struct_stack_current_tl _seq }
153 \debug {
154     MC~#1%
155 \debug }
156 \lua_now:e
157 {
158     ltx.__tag.func.store_struct_mcabs
159     (
160         \g__tag_struct_stack_current_tl,#1
161     )
162 }
163 \prop_gput:Nne
164     \g__tag_mc_parenttree_prop
165     { #1 }
166     { \g__tag_struct_stack_current_tl }
167 }
168 
```

(End of definition for `\__tag_mc_handle_stash:n`.)

**\tag\_mc\_begin:n** This is the lua version of the user command. We currently don't check if there is nesting as it doesn't matter so much in lua.

```

171 \cs_set_protected:Nn \tag_mc_begin:n
172 {
173     \__tag_check_if_active_mc:T
174     {
175         \group_begin:
176         \%__tag_check_mc_if_nested:
177         \bool_gset_true:N \g__tag_in_mc_bool
178         \bool_set_false:N \l__tag_mc_artifact_bool
179         \tl_clear:N \l__tag_mc_key_properties_tl
180         \int_gincr:N \c@g__tag_MCID_abs_int

```

set the default tag to the structure:

```

181     \tl_set_eq:NN \l__tag_mc_key_tag_tl \g__tag_struct_tag_tl
182     \tl_gset_eq:NN \g__tag_mc_key_tag_tl \g__tag_struct_tag_tl
183     \lua_now:e
184     {
185         ltx.__tag.func.store_mc_data(\__tag_get_mc_abs_cnt:, "tag", "\g__tag_struct_tag_tl"
186     }

(End of definition for `tag (mc-key)` and others. These functions are documented on page 71.)

# Part VII

## The **tagpdf-struct** module

### Commands to create the structure

### Part of the tagpdf package

#### 1 Public Commands

---

```
\tag_struct_begin:n \tag_struct_begin:n{\langle key-values\rangle}
\tag_struct_end:
\tag_struct_end:n \tag_struct_end:n{\langle tag\rangle}
```

These commands start and end a new structure. They don't start a group. They set all their values globally. `\tag_struct_end:n` does nothing special normally (apart from swallowing its argument, but if `tagpdf-debug` is loaded, it will check if the `\{\langle tag\rangle\}` (after expansion) is identical to the current structure on the stack. The tag is not role mapped!

---

```
\tag_struct_use:n \tag_struct_use:n{\langle label\rangle}
\tag_struct_use_num:n \tag_struct_use_num:n{\langle structure number\rangle}
```

These commands insert a structure previously stashed away as kid into the currently active structure. A structure should be used only once, if the structure already has a parent a warning is issued.

---

```
\tag_struct_object_ref:n \tag_struct_object_ref:n{\langle struct number\rangle}
```

---

```
\tag_struct_object_ref:e
```

This is a small wrapper around `\pdf_object_ref:n` to retrieve the object reference of the structure with the number `\langle struct number\rangle`. This number can be retrieved and stored for the current structure for example with `\tag_get:n{\langle struct,um\rangle}`. Be aware that it can only be used if the structure has already been created and that it doesn't check if the object actually exists!

The following two functions are used to add annotations. They must be used together and with care to get the same numbers. Perhaps some improvements are needed here.

---

```
\tag_struct_insert_annot:nn \tag_struct_insert_annot:nn{\langle object reference\rangle}{\langle struct parent number\rangle}
```

This inserts an annotation in the structure. `\langle object reference\rangle` is there reference to the annotation. `\langle struct parent number\rangle` should be the same number as had been inserted with `\tag_struct_parent_int:` as `StructParent` value to the dictionary of the annotation. The command will increase the value of the counter used by `\tag_struct_parent_int:`.

---

```
\tag_struct_parent_int: \tag_struct_parent_int:
```

This gives back the next free `/StructParent` number (assuming that it is together with `\tag_struct_insert_annot:nn` which will increase the number).

---

`\tag_struct_gput:nnn \tag_struct_gput:nnn{<structure number>}{'<keyword>'}{'<value>}'`

This is a command that allows to update the data of a structure. This often can't be done simply by replacing the value, as we have to preserve and extend existing content. We use therefore dedicated functions adjusted to the key in question. The first argument is the number of the structure, the second a keyword referring to a function, the third the value. Currently the only keyword is `ref` which updates the `Ref` key (an array)

## 2 Public keys

### 2.1 Keys for the structure commands

---

`tag_{struct-key}` This is required. The value of the key is normally one of the standard types listed in the main tagpdf documentation. It is possible to setup new tags/types. The value can also be of the form `type/NS`, where `NS` is the shorthand of a declared name space. Currently the names spaces `pdf`, `pdf2`, `mathml` and `user` are defined. This allows to use a different name space than the one connected by default to the tag. But normally this should not be needed.

---

`stash_{struct-key}` Normally a new structure inserts itself as a kid into the currently active structure. This key prohibits this. The structure is nevertheless from now on “the current active structure” and parent for following marked content and structures.

---

`label_{struct-key}` This key sets a label by which one can refer to the structure. It is e.g. used by `\tag_struct_use:n` (where a real label is actually not needed as you can only use structures already defined), and by the `ref` key (which can refer to future structures). Internally the label name will start with `tagpdfstruct-` and it stores the two attributes `tagstruct` (the structure number) and `tagstructobj` (the object reference).

---

`parent_{struct-key}` By default a structure is added as kid to the currently active structure. With the parent key one can choose another parent. The value is a structure number which must refer to an already existing, previously created structure. Such a structure number can for example be have been stored with `\tag_get:n`, but one can also use a label on the parent structure and then use `\property_ref:nn{tagpdfstruct-label}{tagstruct}` to retrieve it.

---

`title_{struct-key}` `title-o_{struct-key}` This keys allows to set the dictionary entry `/Title` in the structure object. The value is handled as verbatim string and hex encoded. Commands are not expanded. `title-o` will expand the value once.

---

`alt_{struct-key}` This key inserts an `/Alt` value in the dictionary of structure object. The value is handled as verbatim string and hex encoded. The value will be expanded first once. If it is empty, nothing will happen.

**actualtext<sub>U</sub>(struct-key)** This key inserts an `/ActualText` value in the dictionary of structure object. The value is handled as verbatim string and hex encoded. The value will be expanded first once. If it is empty, nothing will happen.

**lang<sub>U</sub>(struct-key)** This key allows to set the language for a structure element. The value should be a bcp-identifier, e.g. `de-De`.

**ref<sub>U</sub>(struct-key)** This key allows to add references to other structure elements, it adds the `/Ref` array to the structure. The value should be a comma separated list of structure labels set with the `label` key. e.g. `ref={label1,label2}`.

**E<sub>U</sub>(struct-key)** This key sets the `/E` key, the expanded form of an abbreviation or an acronym (I couldn't think of a better name, so I stucked to E).

**AF<sub>U</sub>(struct-key)** `AF = <object name>`  
**AFref<sub>U</sub>(struct-key)** `AFref = <object reference>`  
**AFinline<sub>U</sub>(struct-key)** `AF-inline = <text content>`  
**AFinline-o<sub>U</sub>(struct-key)**  
**texsource**  
**mathml**

These keys allows to reference an associated file in the structure element. The value `<object name>` should be the name of an object pointing to the `/Filespec` dictionary as expected by `\pdf_object_ref:n` from a current l3kernel.

The value `AF-inline` is some text, which is embedded in the PDF as a text file with mime type `text/plain`. `AF-inline-o` is like `AF-inline` but expands the value once.

Future versions will perhaps extend this to more mime types, but it is still a research task to find out what is really needed.

`texsource` is a special variant of `AF-inline-o` which embeds the file as `.tex` source with the `/AFrelationship` key set to `/Source`. It also sets the `/Desc` key to a (currently) fix text.

`mathml` is a special variant of `AF-inline-o` which embeds the file as `.xml` file with the `/AFrelationship` key set to `/Supplement`. It also sets the `/Desc` key to a (currently) fix text.

The argument of `AF` is an object name referring an embedded file as declared for example with `\pdf_object_new:n` or with the `l3pdffile` module. `AF` expands its argument (this allows e.g. to use some variable for automatic numbering) and can be used more than once, to associate more than one file.

The argument of `AFref` is an object reference to an embedded file or a variable expanding to such a object reference in the format as you would get e.g. from `\pdf_object_ref_last:` or `\pdf_object_ref:n` (and which is different for the various engines!). The key allows to make use of anonymous objects. Like `AF` the `AFref` key expands its argument and can be used more than once, to associate more than one file. *It does not check if the reference is valid!*

The inline keys can be used only once per structure. Additional calls are ignored.

---

**attribute<sub>U</sub>(struct-key)** This key takes as argument a comma list of attribute names (use braces to protect the commas from the external key-val parser) and allows to add one or more attribute dictionary entries in the structure object. As an example

```
\tagstructbegin{tag=TH,attribute= TH-row}
```

Attribute names and their content must be declared first in \tagpdfsetup.

---

**attribute-class<sub>U</sub>(struct-key)**

This key takes as argument a comma list of attribute class names (use braces to protect the commas from the external key-val parser) and allows to add one or more attribute classes to the structure object.

Attribute class names and their content must be declared first in \tagpdfsetup.

## 2.2 Setup keys

---

**role/new-attribute<sub>U</sub>(setup-key)** role/new-attribute = {<name>}{<Content>}  
**newattribute<sub>U</sub>(deprecated)**

This key can be used in the setup command \tagpdfsetup and allow to declare a new attribute, which can be used as attribute or attribute class. The value are two brace groups, the first contains the name, the second the content.

```
\tagpdfsetup
{
  role/new-attribute =
  {TH-col}{/0 /Table /Scope /Column},
  role/new-attribute =
  {TH-row}{/0 /Table /Scope /Row},
}
```

---

**root-AF<sub>U</sub>(setup-key)** root-AF = <object name>

This key can be used in the setup command \tagpdfsetup and allows to add associated files to the root structure. Like AF it can be used more than once to add more than one file.

```
1 <@=tag>
2 <*header>
3 \ProvidesExplPackage {tagpdf-struct-code} {2024-04-12} {0.99b}
4 {part of tagpdf - code related to storing structure}
5 </header>
```

## 3 Variables

**\c@g\_\_tag\_struct\_abs\_int** Every structure will have a unique, absolute number. I will use a latex counter for the structure count to have a chance to avoid double structures in align etc.

```
6 <base>\newcounter {g__tag_struct_abs_int }
7 <base>\int_gset:Nn \c@g__tag_struct_abs_int { 1 }
```

(End of definition for `\c@g__tag_struct_abs_int`.)

`\g__tag_struct_objR_seq` a sequence to store mapping between the structure number and the object number. We assume that structure numbers are assign consecutively and so the index of the seq can be used. A seq allows easy mapping over the structures.

```
 8  {*package}
 9  \_\_tag\_seq\_new:N  \g__tag_struct_objR_seq
```

(End of definition for `\g__tag_struct_objR_seq`.)

`\c__tag_struct_null_t1` In lua mode we have to test if the kids a null

```
10  \tl\_const:Nn\c__tag_struct_null_t1 {null}
```

(End of definition for `\c__tag_struct_null_t1`.)

`\g__tag_struct_cont_mc_prop` in generic mode it can happen after a page break that we have to inject into a structure sequence an additional mc after. We will store this additional info in a property. The key is the absolut mc num, the value the pdf directory.

```
11  \_\_tag\_prop\_new:N  \g__tag_struct_cont_mc_prop
```

(End of definition for `\g__tag_struct_cont_mc_prop`.)

`\g__tag_struct_stack_seq` A stack sequence for the structure stack. When a sequence is opened it's number is put on the stack.

```
12  \seq\_new:N      \g__tag_struct_stack_seq
13  \seq\_gpush:Nn  \g__tag_struct_stack_seq {1}
```

(End of definition for `\g__tag_struct_stack_seq`.)

`\g__tag_struct_tag_stack_seq` We will perhaps also need the tags. While it is possible to get them from the numbered stack, lets build a tag stack too.

```
14  \seq\_new:N      \g__tag_struct_tag_stack_seq
15  \seq\_gpush:Nn  \g__tag_struct_tag_stack_seq {{Root}{StructTreeRoot}}
```

(End of definition for `\g__tag_struct_tag_stack_seq`.)

`\g__tag_struct_stack_current_t1` The global variable will hold the current structure number. It is already defined in `tagpdf-base`. The local temporary variable will hold the parent when we fetch it from the stack.

```
16  </package>
17  <base>\tl\_new:N  \g__tag_struct_stack_current_t1
18  <base>\tl\_gset:Nn \g__tag_struct_stack_current_t1 {\int\_use:N\c@g__tag_struct_abs_int}
19  {*package}
20  \tl\_new:N      \l__tag_struct_stack_parent_tmpa_t1
```

(End of definition for `\g__tag_struct_stack_current_t1` and `\l__tag_struct_stack_parent_tmpa_t1`.)

I will need at least one structure: the StructTreeRoot normally it should have only one kid, e.g. the document element.

The data of the StructTreeRoot and the StructElem are in properties: `\g_@@_struct_1_prop` for the root and `\g_@@_struct_N_prop`,  $N \geq 2$  for the other.

This creates quite a number of properties, so perhaps we will have to do this more efficiently in the future.

All properties have at least the keys

### Type StructTreeRoot or StructElem

and the keys from the two following lists (the root has a special set of properties). the values of the prop should be already escaped properly when the entries are created (title, lange, alt, E, actualtext)

```
\c__tag_struct_StructTreeRoot_entries_seq
\c__tag_struct_StructElem_entries_seq
```

These seq contain the keys we support in the two object types. They are currently no longer used, but are provided as documentation and for potential future checks. They should be adapted if there are changes in the PDF format.

```

21 \seq_const_from_clist:Nn \c__tag_struct_StructTreeRoot_entries_seq
22   f%p. 857/858
23   Type,           % always /StructTreeRoot
24   K,              % kid, dictionary or array of dictionaries
25   IDTree,         % currently unused
26   ParentTree,     % required,obj ref to the parent tree
27   ParentTreeNextKey, % optional
28   RoleMap,
29   ClassMap,
30   Namespaces,
31   AF              %pdf 2.0
32 }
33
34 \seq_const_from_clist:Nn \c__tag_struct_StructElem_entries_seq
35   f%p 858 f
36   Type,           %always /StructElem
37   S,              %tag/type
38   P,              %parent
39   ID,             %optional
40   Ref,            %optional, pdf 2.0 Use?
41   Pg,             %obj num of starting page, optional
42   K,              %kids
43   A,              %attributes, probably unused
44   C,              %class ""
45   %R,             %attribute revision number, irrelevant for us as we
46   % don't update/change existing PDF and (probably)
47   % deprecated in PDF 2.0
48   T,              %title, value in () or <>
49   Lang,            %language
50   Alt,             % value in () or <>
51   E,              % abbreviation
52   ActualText,
53   AF,             %pdf 2.0, array of dict, associated files
54   NS,             %pdf 2.0, dict, namespace
55   PhoneticAlphabet, %pdf 2.0
56   Phoneme          %pdf 2.0
57 }
```

(End of definition for \c\_\_tag\_struct\_StructTreeRoot\_entries\_seq and \c\_\_tag\_struct\_StructElem\_entries\_seq.)

### 3.1 Variables used by the keys

Use by the tag key to store the tag and the namespace. The role tag variables will hold locally rolemapping info needed for the parent-child checks

```
\g__tag_struct_tag_tl
\g__tag_struct_tag_NS_tl
\l__tag_struct_roletag_tl
\g__tag_struct_roletag_NS_tl
```

```

58 \tl_new:N \g_tag_struct_tag_tl
59 \tl_new:N \g_tag_struct_tag_NS_tl
60 \tl_new:N \l_tag_struct_roletag_tl
61 \tl_new:N \l_tag_struct_roletag_NS_tl

```

(End of definition for `\g_tag_struct_tag_tl` and others.)

`\l_tag_struct_key_label_tl` This will hold the label value.

```

62 \tl_new:N \l_tag_struct_key_label_tl

```

(End of definition for `\l_tag_struct_key_label_tl`.)

`\l_tag_struct_elem_stash_bool` This will keep track of the stash status

```

63 \bool_new:N \l_tag_struct_elem_stash_bool

```

(End of definition for `\l_tag_struct_elem_stash_bool`.)

### 3.2 Variables used by tagging code of basic elements

`\g_tag_struct_dest_num_prop` This variable records for (some or all, not clear yet) destination names the related structure number to allow to reference them in a Ref. The key is the destination. It is currently used by the toc-tagging and sec-tagging code.

```

64 </package>
65 <base> \prop_new_linked:N \g_tag_struct_dest_num_prop
66 {*package}

```

(End of definition for `\g_tag_struct_dest_num_prop`.)

`\g_tag_struct_ref_by_dest_prop` This variable contains structures whose Ref key should be updated at the end to point to structured related with this destination. As this is probably need in other places too, it is not only a toc-variable.

```

67 \prop_new_linked:N \g_tag_struct_ref_by_dest_prop

```

(End of definition for `\g_tag_struct_ref_by_dest_prop`.)

## 4 Commands

The properties must be in some places handled expandably. So I need an output handler for each prop, to get expandable output see <https://tex.stackexchange.com/questions/424208>. There is probably room here for a more efficient implementation. TODO check if this can now be implemented with the pdfdict commands. The property contains currently non pdf keys, but e.g. object numbers are perhaps no longer needed as we have named object anyway.

```

\_tag_struct_output_prop_aux:nn
\_\_tag_new_output_prop_handler:n
68 \cs_new:Npn \_\_tag_struct_output_prop_aux:nn #1 #2 %#1 num, #2 key
69   {
70     \prop_if_in:cNT
71     { g_tag_struct_#1_prop }
72     { #2 }
73     {
74       \c_space_tl/#2~ \prop_item:cn{ g_tag_struct_#1_prop } { #2 }
75     }

```

```

76    }
77
78 \cs_new_protected:Npn \__tag_new_output_prop_handler:n #1
79 {
80     \cs_new:c { __tag_struct_output_prop_#1:n }
81     {
82         \__tag_struct_output_prop_aux:nn {#1}{##1}
83     }
84 }
85 ⟨/package⟩

```

(End of definition for `\__tag_struct_output_prop_aux:nn` and `\__tag_new_output_prop_handler:n`.)

`\__tag_struct_prop_gput:nnn`

The structure props must be filled in various places. For this we use a common command which also takes care of the debug package:

```

86 ⟨*package | debug⟩
87 ⟨package⟩\cs_new_protected:Npn \__tag_struct_prop_gput:nnn #1 #2 #3
88 ⟨debug⟩\cs_set_protected:Npn \__tag_struct_prop_gput:nnn #1 #2 #3
89 {
90     \__tag_prop_gput:cnn
91     { g__tag_struct_#1_prop }{#2}{#3}
92 ⟨debug⟩\prop_gput:cnn { g__tag_struct_debug_#1_prop } {#2} {#3}
93 }
94 \cs_generate_variant:Nn \__tag_struct_prop_gput:nnn {nne,nee,nno}
95 ⟨/package | debug⟩

```

(End of definition for `\__tag_struct_prop_gput:nnn`.)

## 4.1 Initialization of the StructTreeRoot

The first structure element, the StructTreeRoot is special, so created manually. The underlying object is `@@/struct/1` which is currently created in the tree code (TODO move it here). The `ParentTree` and `RoleMap` entries are added at begin document in the tree code as they refer to objects which are setup in other parts of the code. This avoid timing issues.

```

96 ⟨*package⟩
97 \tl_gset:Nn \g__tag_struct_stack_current_tl {1}

```

`\__tag_pdf_name_e:n`

```

98 \cs_new:Npn \__tag_pdf_name_e:n #1{\pdf_name_from_unicode_e:n{#1}}
99 ⟨/package⟩

```

(End of definition for `\__tag_pdf_name_e:n`.)

`g__tag_struct_1_prop`  
`g__tag_struct_kids_1_seq`

```

100 ⟨*package⟩
101 \__tag_prop_new:c { g__tag_struct_1_prop }
102 \__tag_new_output_prop_handler:n {1}
103 \__tag_seq_new:c { g__tag_struct_kids_1_seq }
104
105 \__tag_struct_prop_gput:nne
106 { 1 }
107 { Type }
108 { \pdf_name_from_unicode_e:n {StructTreeRoot} }

```

```

109 \_tag_struct_prop_gput:nne
110 { 1 }
111 { S }
112 { \pdf_name_from_unicode_e:n {StructTreeRoot} }
113
114 \_tag_struct_prop_gput:nne
115 { 1 }
116 { rolemap }
117 { {StructTreeRoot}{pdf} }
118
119 \_tag_struct_prop_gput:nne
120 { 1 }
121 { parentrole }
122 { {StructTreeRoot}{pdf} }
123
124

```

Namespaces are pdf 2.0. If the code moves into the kernel, the setting must be probably delayed.

```

125 \pdf_version_compare:NnF < {2.0}
126 {
127     \_tag_struct_prop_gput:nne
128     { 1 }
129     { Namespaces }
130     { \pdf_object_ref:n { __tag/tree/namespaces } }
131 }
132 
```

In debug mode we have to copy the root manually as it is already setup:

```

133 <debug>\prop_new:c { g__tag_struct_debug_1_prop }
134 <debug>\seq_new:c { g__tag_struct_debug_kids_1_seq }
135 <debug>\prop_gset_eq:cc { g__tag_struct_debug_1_prop }{ g__tag_struct_1_prop }
136 <debug>\prop_gremove:cn { g__tag_struct_debug_1_prop }{Namespaces}

```

(End of definition for `g__tag_struct_1_prop` and `g__tag_struct_kids_1_seq`.)

## 4.2 Adding the /ID key

Every structure gets automatically an ID which is currently simply calculated from the structure number.

```
\__tag_struct_get_id:n
137 <*package>
138 \cs_new:Npn \__tag_struct_get_id:n #1 %#1=struct num
139 {
140     (
141     ID.
142     \prg_replicate:nn
143     { \int_abs:n{ \g__tag_tree_id_pad_int - \tl_count:e { \int_to_arabic:n { #1 } } } }
144     { 0 }
145     \int_to_arabic:n { #1 }
146 )
147 }
```

(End of definition for `\__tag_struct_get_id:n`.)

### 4.3 Filling in the tag info

This adds or updates the tag info to a structure given by a number. We need also the original data, so we store both.

```

148 \pdf_version_compare:NnTF < {2.0}
149 {
150   \cs_new_protected:Npn \__tag_struct_set_tag_info:nnn #1 #2 #3
151   %#1 structure number, #2 tag, #3 NS
152   {
153     \__tag_struct_prop_gput:nne
154     { #1 }
155     { S }
156     { \pdf_name_from_unicode_e:n {#2} } %
157   }
158 }
159 {
160   \cs_new_protected:Npn \__tag_struct_set_tag_info:nnn #1 #2 #3
161   {
162     \__tag_struct_prop_gput:nne
163     { #1 }
164     { S }
165     { \pdf_name_from_unicode_e:n {#2} } %
166     \prop_get:NnNT \g__tag_role_NS_prop {#3} \l__tag_get_tmpc_tl
167     {
168       \__tag_struct_prop_gput:nne
169       { #1 }
170       { NS }
171       { \l__tag_get_tmpc_tl } %
172     }
173   }
174 }
175 \cs_generate_variant:Nn \__tag_struct_set_tag_info:nnn {eVV}

(End of definition for \__tag_struct_set_tag_info:nnn.)
```

We also need a way to get the tag info needed for parent child check from parent structures.

```

176 \cs_new_protected:Npn \__tag_struct_get_parentrole:nNN #1 #2 #3
177 %#1 struct num, #2 tlvar for tag, #3 tlvar for NS
178 {
179   \prop_get:cNNTF
180   { g__tag_struct_#1_prop }
181   { parentrole }
182   \l__tag_get_tmpc_tl
183   {
184     \tl_set:Ne #2{\exp_last_unbraced:NV\use_i:nn \l__tag_get_tmpc_tl}
185     \tl_set:Ne #3{\exp_last_unbraced:NV\use_ii:nn \l__tag_get_tmpc_tl}
186   }
187   {
188     \tl_clear:N#2
189     \tl_clear:N#3
190   }
191 }
192 \cs_generate_variant:Nn \__tag_struct_get_parentrole:nNN {eNN}
```

(End of definition for `\_tag_struct_get_parentrole:nNN`.)

## 4.4 Handlings kids

Commands to store the kids. Kids in a structure can be a reference to a mc-chunk, an object reference to another structure element, or a object reference to an annotation (through an OBJR object).

```
\_tag_struct_kid_mc_gput_right:nn
\_tag_struct_kid_mc_gput_right:ne
```

The command to store an mc-chunk, this is a dictionary of type MCR. It would be possible to write out the content directly as unnamed object and to store only the object reference, but probably this would be slower, and the PDF is more readable like this. The code doesn't try to avoid the use of the /Pg key by checking page numbers. That imho only slows down without much gain. In generic mode the page break code will perhaps have to insert an additional mcid after an existing one. For this we use a property list At first an auxiliary to write the MCID dict. This should normally be expanded!

```

193 \cs_new:Npn \_tag_struct_mcid_dict:n #1 %#1 MCID absnum
194 {
195     <<

(End of definition for `\__tag_struct_kid_OBJR_gput_right:nnn`.)

`\__tag_struct_exchange_kid_command:N`  
`\__tag_struct_exchange_kid_command:c`

In luamode it can happen that a single kid in a structure is split at a page break into two or more mcid. In this case the lua code has to convert put the dictionary of the kid into an array. See issue 13 at tagpdf repo. We exchange the dummy command for the kids to mark this case. Change 2024-03-19: don't use a regex - that is slow.

```

265 \cs_new_protected:Npn\__tag_struct_exchange_kid_command:N #1 %#1 = seq var
266 {

```

```

267   \seq_gpop_left:NN #1 \l__tag_tmpa_tl
268   \tl_replace_once:Nnn \l__tag_tmpa_tl
269   { \__tag_mc_insert_mcid_kids:n }
270   { \__tag_mc_insert_mcid_single_kids:n }
271   \seq_gput_left:NV #1 \l__tag_tmpa_tl
272 }
273
274 \cs_generate_variant:Nn \__tag_struct_exchange_kid_command:N { c }
(End of definition for \__tag_struct_exchange_kid_command:N.)

```

\\_\_tag\_struct\_fill\_kid\_key:n This command adds the kid info to the K entry. In lua mode the content contains commands which are expanded later. The argument is the structure number.

```

275 \cs_new_protected:Npn \__tag_struct_fill_kid_key:n #1 %#1 is the struct num

352  }
353  }
354

```

(End of definition for `\__tag_struct_fill_kid_key:n.`)

## 4.5 Output of the object

`\__tag_struct_get_dict_content:nN`

This maps the dictionary content of a structure into a tl-var. Basically it does what `\pdfdict_use:n` does. This is used a lot so should be rather fast.

```

355 \cs_new_protected:Npn \__tag_struct_get_dict_content:nN #1 #2 %#1: stucture num
356  {
357      \tl_clear:N #2
358      \prop_map_inline:cn { g__tag_struct_#1_prop }
359      {
360          \tl_put_right:Nn #2

```

```
361           }
```

Some keys needs the option to format the value, e.g. add brackets for an array, we also need the option to ignore some entries in the properties.

```
362   \cs_if_exist_use:cTF {\_tag_struct_format_##1:nn}
363     {{##1}{##2}}
364     {\c_space_tl/##1~##2}
365   }
366 }
367 }
```

(End of definition for `\_tag_struct_get_dict_content:nN`.)

This two entries should not end in the PDF.

```
368 \cs_new:Nn \_tag_struct_format_rolemap:nn {}
369 \cs_new:Nn \_tag_struct_format_parentrole:nn {}
```

(End of definition for `\_tag_struct_format_rolemap:nn` and `\_tag_struct_format_parentrole:nn`.)

`\_tag_struct_format_Ref:nn` Ref is an array, we store only the content to be able to extend it so the formatting command adds the brackets:

```
370 \cs_new:Nn \_tag_struct_format_Ref:nn {\c_space_tl/#1~[#2]}
```

(End of definition for `\_tag_struct_format_Ref:nn`.)

`\_tag_struct_write_obj:n` This writes out the structure object. This is done in the finish code, in the tree module and guarded by the tree boolean.

```
371 \cs_new_protected:Npn \_tag_struct_write_obj:n #1 % #1 is the struct num
372   {
373     \prop_if_exist:cTF {g\_tag_struct_#1_prop}
374   }
```

It can happen that a structure is not used and so has not parent. Simply ignoring it is problematic as it is also recorded in the IDTree, so we make an artifact out of it.

```
375   \prop_get:cnNF {g\_tag_struct_#1_prop} {P}\l\_tag_tmpb_t1
376   {
377     \prop_gput:cne {g\_tag_struct_#1_prop} {P}\pdf_object_ref_indexed:nn {\_tag/
378     \prop_gput:cne {g\_tag_struct_#1_prop} {S}{/Artifact}
379     \seq_if_empty:cF {g\_tag_struct_kids_#1_seq}
380     {
381       \msg_warning:nnee
382         {tag}
383         {struct-orphan}
384         {#1}
385         {\seq_count:c{g\_tag_struct_kids_#1_seq}}
386     }
387   }
388   \_tag_struct_fill_kid_key:n {#1}
389   \_tag_struct_get_dict_content:nN {#1} \l\_tag_tmpa_t1
390   \pdf_object_write_indexed:nne
391     {\_tag/struct }{#1}
392     {dict}
393     {
394       \l\_tag_tmpa_t1\c_space_tl
395       /ID~\_tag_struct_get_id:n{#1}
```

```

396         }
397
398     }
399     {
400         \msg_error:nnn { tag } { struct-no-objnum } { #1}
401     }
402 }
```

(End of definition for `\_tag_struct_write_obj:n.`)

`\_tag_struct_insert_annot:nn` This is the command to insert an annotation into the structure. It can probably be used for xform too.

Annotations used as structure content must

1. add a StructParent integer to their dictionary
2. push the object reference as OJBR object in the structure
3. Add a Structparent/obj-nr reference to the parent tree.

For a link this looks like this

```

\tag_struct_begin:n { tag=Link }
\tag_mc_begin:n { tag=Link }
(1) \pdfannot_dict_put:nne
    { link/URI }
    { StructParent }
    { \int_use:N\c@g_@@_parenttree_obj_int }
<start link> link text <stop link>
(2+3) \@@_struct_insert_annot:nn {obj ref}{parent num}
      \tag_mc_end:
      \tag_struct_end:

403 \cs_new_protected:Npn \_tag_struct_insert_annot:nn #1 #2 %#1 object reference to the annotat
404                                         %#2 structparent number
405 {
406     \bool_if:NT \g__tag_active_struct_bool
407     {
408         %get the number of the parent structure:
409         \seq_get:NNF
410             \g__tag_struct_stack_seq
411             \l__tag_struct_stack_parent_tma_tl
412             {
413                 \msg_error:nn { tag } { struct-faulty-nesting }
414             }
415         %put the obj number of the annot in the kid entry, this also creates
416         %the OJBR object
417         \_tag_property_record:nn {@tag@objr@page@#2 }{ tagabspage }
418         \_tag_struct_kid_OJBR_gput_right:eee
419         {
420             \l__tag_struct_stack_parent_tma_tl
421         }
422         {
423             #1 %
424         }
```

```

425      {
426          \pdf_pageobject_ref:n { \_tag_property_ref:nnn {\@tag@objr@page@#2 }{ tagabspage
427          }
428          % add the parent obj number to the parent tree:

(End of definition for label (struct-key) and others. These functions are documented on page 101.)

**AF<sub>U</sub>(struct-key)** keys for the AF keys (associated files). They use commands from l3pdffile! The stream variants use txt as extension to get the mimetype. TODO: check if this should be configurable. For math we will perhaps need another extension. AF/ARef is an array and can be used more than once, so we store it in a tl. which is expanded. AFinline

currently uses the fix extention txt. texsource is a special variant which creates a tex-file, it expects a tl-var as value (e.g. from math grabbing)

This variable is used to number the AF-object names

```

1075 </package | debug>

```

(End of definition for \tag\_struct\_use\_num:n. This function is documented on page 100.)

### \tag\_struct\_object\_ref:n

This is a command that allows to reference a structure. The argument is the number which can be get for the current structure with \tag\_get:n{struct\_num} TODO check if it should be in base too.

```
1076 (*package)
1077 \cs_new:Npn \tag_struct_object_ref:n #1
1078 {
1079     \pdf_object_ref_indexed:nn {__tag/struct}{#1}
1080 }
1081 \cs_generate_variant:Nn \tag_struct_object_ref:n {e}
```

(End of definition for \tag\_struct\_object\_ref:n. This function is documented on page 100.)

### \tag\_struct\_gput:nnn

This is a command that allows to update the data of a structure. This often can't done simply by replacing the value, as we have to preserve and extend existing content. We use therefore dedicated functions adjusted to the key in question. The first argument is the number of the structure, the second a keyword referring to a function, the third the value. Currently the only keyword is `ref` which updates the `Ref` key (an array)

```
1082 \cs_new_protected:Npn \tag_struct_gput:nnn #1 #2 #3
1083 {
1084     \cs_if_exist_use:cF {__tag_struct_gput_data_#2:nn}
1085     { %warning??
1086         \use_none:nn
1087     }
1088     {#1}{#3}
1089 }
1090 \cs_generate_variant:Nn \tag_struct_gput:nnn {ene,nne}
1091 
```

(End of definition for \tag\_struct\_gput:nnn. This function is documented on page 101.)

### \\_\_tag\_struct\_gput\_data\_ref:nn

```
1092 (*package)
1093 \cs_new_protected:Npn \__tag_struct_gput_data_ref:nn #1 #2
1094     % #1 receiving struct num, #2 list of object ref
1095 {
1096     \prop_get:cN
1097     { g__tag_struct_#1_prop }
1098     {Ref}
1099     \l__tag_get_tmpc_tl
1100     \__tag_struct_prop_gput:nne
1101     { #1 }
1102     { Ref }
1103     { \quark_if_no_value:N \l__tag_get_tmpc_tl { \l__tag_get_tmpc_tl\c_space_tl }#2 }
1104 }
1105 \cs_generate_variant:Nn \__tag_struct_gput_data_ref:nn {ee}
```

(End of definition for \\_\_tag\_struct\_gput\_data\_ref:nn.)

### \tag\_struct\_insert\_annot:nn

### \tag\_struct\_insert\_annot:ee

### \tag\_struct\_insert\_annot:ee

### \tag\_struct\_parent\_int:

This are the user command to insert annotations. They must be used together to get the numbers right. They use a counter to the `StructParent` and \tag\_struct\_insert\_annot:nn increases the counter given back by \tag\_struct\_parent\_int:.

It must be used together with \tag\_struct\_parent\_int: to insert an annotation. TODO: decide how it should be guarded if tagging is deactivated.

```
1106 \cs_new_protected:Npn \tag_struct_insert_annot:nn #1 #2 %#1 should be an object reference
```

```

1107          %%2 struct parent num
1108      {
1109          \__tag_check_if_active_struct:T
1110          {
1111              \__tag_struct_insert_annot:nn {#1}{#2}
1112          }
1113      }
1114
1115 \cs_generate_variant:Nn \tag_struct_insert_annot:nn {xx,ee}
1116 \cs_new:Npn \tag_struct_parent_int: {\int_use:c {c@g_tag_parenttree_obj_int}}
1117
1118 </package>
1119

```

(End of definition for \tag\_struct\_insert\_annot:nn and \tag\_struct\_parent\_int:. These functions are documented on page 100.)

## 7 Attributes and attribute classes

```

1120 <*header>
1121 \ProvidesExplPackage {tagpdf-attr-code} {2024-04-12} {0.99b}
1122     {part of tagpdf - code related to attributes and attribute classes}
1123 </header>

```

### 7.1 Variables

\g\\_tag\\_attr\\_entries\\_prop  
\g\\_tag\\_attr\\_class\\_used\\_prop  
\g\\_tag\\_attr\\_objref\\_prop  
\l\\_tag\\_attr\\_value\\_tl  
\g\\_attr\\_entries\\_prop will store attribute names and their dictionary content.  
\g\\_attr\\_class\\_used\\_prop will hold the attributes which have been used as class name. \l\\_attr\\_value\\_tl is used to build the attribute array or key. Every time an attribute is used for the first time, and object is created with its content, the name-object reference relation is stored in \g\\_attr\\_objref\\_prop

```

1124 <*package>
1125 \prop_new:N \g\_tag\_attr\_entries\_prop
1126 \prop_new_linked:N \g\_tag\_attr\_class\_used\_prop
1127 \tl_new:N \l\_tag\_attr\_value\_tl
1128 \prop_new:N \g\_tag\_attr\_objref\_prop %will contain obj num of used attributes

```

This seq is currently kept for compatibility with the table code.

```
1129 \seq_new:N \g\_tag\_attr\_class\_used\_seq
```

(End of definition for \g\\_tag\\_attr\\_entries\\_prop and others.)

### 7.2 Commands and keys

\\_\_tag\_attr\_new\_entry:nn  
role/new-attribute<sub>0</sub>(setup-key)  
newattribute<sub>0</sub>(deprecated)

This allows to define attributes. Defined attributes are stored in a global property. role/new-attribute expects two brace group, the name and the content. The content typically needs an /0 key for the owner. An example look like this.

TODO: consider to put them directly in the ClassMap, that is perhaps more effective.

```
\tagpdfsetup
{
    role/new-attribute =
        {TH-col}{/0 /Table /Scope /Column},
    role/new-attribute =

```

```

{TH-row}{/0 /Table /Scope /Row},
}

# Part VIII

## The **tagpdf-luatex.def**

### Driver for luatex

### Part of the tagpdf package

```

1 <@=tag>
2 <*luatex>
3 \ProvidesExplFile {tagpdf-luatex.def} {2024-04-12} {0.99b}
4 {tagpdf-driver~for~luatex}

```

## 1 Loading the lua

The space code requires that the fall back font has been loaded and initialized, so we force that first. But perhaps this could be done in the kernel.

```

5 {
6   \fontencoding{TU}\fontfamily{lmr}\fontseries{m}\fontshape{n}\fontsize{10pt}{10pt}\selectfont
7 }
8 \lua_now:e { tagpdf=require('tagpdf.lua') }

```

The following defines wrappers around prop and seq commands to store the data also in lua tables. I probably want also lua tables I put them in the ltx.@@.tables namespaces. The tables will be named like the variables but without backslash. To access such a table with a dynamical name create a string and then use ltx.@@.tables[string]. Old code, I'm not quite sure if this was a good idea. Now I have mix of table in ltx.@@.tables and ltx.@@.mc/struct. And a lot is probably not needed. TODO: this should be cleaned up, but at least roles are currently using the table!

83 end
84
85 --[[[
86 The code has quite probably a number of problems
87 - more variables should be local instead of global
88 - the naming is not always consistent due to the development of the code
89 - the traversing of the shipout box must be tested with more complicated setups
90 - it should probably handle more node types
91 -
92 --]]
93

```

Some comments about the lua structure.

```

94 --[[[
95 the main table is named ltx.__tag. It contains the functions and also the data
96 collected during the compilation.
97
98 ltx.__tag.mc      will contain mc connected data.
99 ltx.__tag.struct will contain structure related data.
100 ltx.__tag.page    will contain page data
101 ltx.__tag.tables contains also data from mc and struct (from older code). This needs cleaning
102           There are certainly dublettes, but I don't dare yet ...
103 ltx.__tag.func    will contain (public) functions.
104 ltx.__tag.trace   will contain tracing/logging functions.
105 local functions starts with __
106 functions meant for users will be in ltx.tag
107
108 functions
109 ltx.__tag.func.get_num_from (tag):      takes a tag (string) and returns the id number
110 ltx.__tag.func.output_num_from (tag):    takes a tag (string) and prints (to tex) the id number
111 ltx.__tag.func.get_tag_from (num):       takes a num and returns the tag
112 ltx.__tag.func.output_tag_from (num):    takes a num and prints (to tex) the tag
113 ltx.__tag.func.store_mc_data (num,key,data): stores key=data in ltx.__tag.mc[num]
114 ltx.__tag.func.store_mc_label (label,num): stores label=num in ltx.__tag.mc.labels
115 ltx.__tag.func.store_mc_kid (mcnum,kid,page): stores the mc-kids of mcnum on page page
116 ltx.__tag.func.store_mc_in_page(mcnum,mcpagect,page): stores in the page table the number of
117 ltx.__tag.func.store_struct_mcabs (structnum,mcnum): stores relations structnum<->mcnum (abs)
118 ltx.__tag.func.mc_insert_kids (mcnum): inserts the /K entries for mcnum by wandering through
119 ltx.__tag.func.mark_page_elements(box,mcpagect,mccntprev,mcopen,name,mctypenext) : the main
120 ltx.__tag.func.mark_shipout (): a wrapper around the core function which inserts the last EN
121 ltx.__tag.func.fill_parent_tree_line (page): outputs the entries of the parenttree for this
122 ltx.__tag.func.output_parenttree(): outputs the content of the parenttree
123 ltx.__tag.func.pdf_object_ref(name,index): outputs the object reference for the object name
124 ltx.__tag.func.markspaceon(), ltx.__tag.func.markspaceoff(): (de)activates the marking of po
125 ltx.__tag.trace.show_mc_data (num,loglevel): shows ltx.__tag.mc[num] is the current log leve
126 ltx.__tag.trace.show_all_mc_data (max,loglevel): shows a maximum about mc's if the current l
127 ltx.__tag.trace.show_seq: shows a sequence (array)
128 ltx.__tag.trace.show_struct_data (num): shows data of structure num
129 ltx.__tag.trace.show_prop: shows a prop
130 ltx.__tag.trace.log
131 ltx.__tag.trace.showspace : boolean
132 --]]

```

This set-ups the main attribute registers. The mc\_type attribute stores the type (P, Span etc) encoded as a num, The mc\_cnt attribute stores the absolute number and allows so to see if a node belongs to the same mc-chunk.

The interwordspace attr is set by the function `@@_mark_spaces`, and marks the place where spaces should be inserted. The interwordfont attr is set by the function `@@_mark_spaces` too and stores the font, so that we can decide which font to use for the real space char. The interwordspaceOff attr allows to locally suppress the insertion of real space chars, e.g. when they are inserted by other means (e.g. with \char).

```

134 local mctypeattributeid = luatexbase.new_attribute ("g__tag_mc_type_attr")
135 local mccntattributeid = luatexbase.new_attribute ("g__tag_mc_cnt_attr")
136 local iwspaceOffattributeid = luatexbase.new_attribute ("g__tag_interwordspaceOff_attr")
137 local iwspaceattributeid = luatexbase.new_attribute ("g__tag_interwordspace_attr")
138 local iwoffattributeid = luatexbase.new_attribute ("g__tag_interwordfont_attr")

```

with this token we can query the state of the boolean and so detect if unmarked nodes should be marked as attributes

```

139 local tagunmarkedbool= token.create("g__tag_tagunmarked_bool")
140 local truebool      = token.create("c_true_bool")

```

Now a number of local versions from global tables. Not all is perhaps needed, most node variants were copied from lua-debug.

```

141 local catlatex      = luatexbase.registernumber("catcodetable@latex")
142 local tableinsert    = table.insert
143 local nodeid         = node.id
144 local nodecopy       = node.copy
145 local nodegetattribute = node.get_attribute
146 local nodesetattribute = node.set_attribute
147 local nodehasattribute = node.has_attribute
148 local nodenew        = node.new
149 local nodetail       = node.tail
150 local nodeslide      = node.slide
151 local noderemove     = node.remove
152 local nodetraverseid = node.traverse_id
153 local nodetraverse   = node.traverse
154 local nodeinsertafter = node.insert_after
155 local nodeinsertbefore = node.insert_before
156 local pdfpageref     = pdf.pageref
157
158 local fonthashes     = fonts.hashes
159 local identifiers    = fonthashes.identifiers
160 local fontid          = font.id
161
162 local HLIST          = node.id("hlist")
163 local VLIST          = node.id("vlist")
164 local RULE            = node.id("rule")
165 local DISC            = node.id("disc")
166 local GLUE            = node.id("glue")
167 local GLYPH           = node.id("glyph")
168 local KERN            = node.id("kern")
169 local PENALTY          = node.id("penalty")
170 local LOCAL_PAR        = node.id("local_par")
171 local MATH            = node.id("math")

```

Now we setup the main table structure. ltx is used by other latex code too!

```

172 ltx          = ltx      or { }
173 ltx.__tag     = ltx.__tag      or { }
174 ltx.__tag.mc  = ltx.__tag.mc  or { } -- mc data
175 ltx.__tag.struct = ltx.__tag.struct or { } -- struct data
176 ltx.__tag.tables = ltx.__tag.tables or { } -- tables created with new prop and new seq.
177                                         -- wasn't a so great idea ...
178                                         -- g__tag_role_tags_seq used by tag<-> is in this tab
179                                         -- used for pure lua tables too now!
180 ltx.__tag.page   = ltx.__tag.page  or { } -- page data, currently only i->{0->mcnum,1->ma
181 ltx.__tag.trace  = ltx.__tag.trace or { } -- show commands
182 ltx.__tag.func   = ltx.__tag.func  or { } -- functions
183 ltx.__tag.conf   = ltx.__tag.conf  or { } -- configuration variables

```

## 2 Logging functions

This rather simple log function takes as argument a message (string) and a number and will output the message to the log/terminal if the current loglevel is greater or equal than num.

```

184 local __tag_log =
185   function (message,loglevel)
186     if (loglevel or 3) <= tex.count["l__tag_loglevel_int"] then
187       texio.write_nl("tagpdf: ".. message)
188     end
189   end
190
191 ltx.__tag.trace.log = __tag_log

```

(End of definition for `__tag_log` and `ltx.__tag.trace.log`.)

`ltx.__tag.trace.show_seq` This shows the content of a seq as stored in the tables table. It is used by the `\@C_seq_show:N` function. It is not used in user commands, only for debugging, and so requires log level  $>0$ .

```

192 function ltx.__tag.trace.show_seq (seq)
193   if (type(seq) == "table") then
194     for i,v in ipairs(seq) do
195       __tag_log ("[" .. i .. "] => " .. tostring(v),1)
196     end
197   else
198     __tag_log ("sequence " .. tostring(seq) .. " not found",1)
199   end
200 end

```

(End of definition for `ltx.__tag.trace.show_seq`.)

`__tag_pairs_prop` `ltx.__tag.trace.show_prop` This shows the content of a prop as stored in the tables table. It is used by the `\@C_prop_show:N` function.

```

201 local __tag_pairs_prop =
202   function (prop)
203     local a = {}
204     for n in pairs(prop) do tableinsert(a, n) end
205     table.sort(a)

```

```

206      local i = 0           -- iterator variable
207      local iter = function ()  -- iterator function
208          i = i + 1
209          if a[i] == nil then return nil
210          else return a[i], prop[a[i]]
211          end
212      end
213      return iter
214  end
215
216
217  function ltx._tag.trace.show_prop (prop)
218  if (type(prop) == "table") then
219    for i,v in __tag_pairs_prop (prop) do
220      __tag_log ("[" .. i .. "] => " .. tostring(v),1)
221      end
222    else
223      __tag_log ("prop " .. tostring(prop) .. " not found or not a table",1)
224    end
225  end

```

(End of definition for `__tag_pairs_prop` and `ltx._tag.trace.show_prop`.)

`ltx._tag.trace.show_mc_data` This shows some data for a mc given by num. If something is shown depends on the log level. The function is used by the following function and then in \ShowTagging

```

226  function ltx._tag.trace.show_mc_data (num,loglevel)
227  if ltx._tag and ltx._tag.mc and ltx._tag.mc[num] then
228    for k,v in pairs(ltx._tag.mc[num]) do
229      __tag_log ("mc"..num.."": "..tostring(k).."=>"..tostring(v),loglevel)
230    end
231    if ltx._tag.mc[num]["kids"] then
232      __tag_log ("mc" .. num .. " has " .. #ltx._tag.mc[num]["kids"] .. " kids",loglevel)
233      for k,v in ipairs(ltx._tag.mc[num]["kids"]) do
234        __tag_log ("mc ".. num .. " kid "..k.." => " .. v.kid.." on page " .. v.page,loglevel)
235      end
236    end
237  else
238    __tag_log ("mc"..num.." not found",loglevel)
239  end
240 end

```

(End of definition for `ltx._tag.trace.show_mc_data`.)

`ltx._tag.trace.show_all_mc_data` This shows data for the mc's between min and max (numbers). It is used by the \ShowTagging function.

```

241  function ltx._tag.trace.show_all_mc_data (min,max,loglevel)
242    for i = min, max do
243      ltx._tag.trace.show_mc_data (i,loglevel)
244    end
245    texio.write_nl("")
246 end

```

(End of definition for `ltx._tag.trace.show_all_mc_data`.)

```
ltx.__tag.trace.show_struct_data
```

This function shows some struct data. Unused but kept for debugging.

```
247 function ltx.__tag.trace.show_struct_data (num)
248   if ltx.__tag and ltx.__tag.struct and ltx.__tag.struct[num] then
249     for k,v in ipairs(ltx.__tag.struct[num]) do
250       __tag_log ("struct "..num..": "..tostring(k).."=>"..tostring(v),1)
251     end
252   else
253     __tag_log ("struct "..num.." not found ",1)
254   end
255 end
```

(End of definition for `ltx.__tag.trace.show_struct_data.`)

## 3 Helper functions

### 3.1 Retrieve data functions

`--tag_get_mc_cnt_type_tag` This takes a node as argument and returns the mc-cnt, the mc-type and and the tag (calculated from the mc-cnt).

```
256 local __tag_get_mc_cnt_type_tag = function (n)
257   local mccnt      = nodegetattribute(n,mccntattributeid) or -1
258   local mctype     = nodegetattribute(n,mctypeattributeid) or -1
259   local tag        = ltx.__tag.func.get_tag_from(mctype)
260   return mccnt,mctype,tag
261 end
```

(End of definition for `--tag_get_mc_cnt_type_tag.`)

```
--tag_get_mathsubtype
```

This function allows to detect if we are at the begin or the end of math. It takes as argument a mathnode.

```
262 local function __tag_get_mathsubtype (mathnode)
263   if mathnode.subtype == 0 then
264     subtype = "beginmath"
265   else
266     subtype = "endmath"
267   end
268   return subtype
269 end
```

(End of definition for `--tag_get_mathsubtype.`)

```
ltx.__tag.tables.role_tag_attribute
```

The first is a table with key a tag and value a number (the attribute) The second is an array with the attribute value as key.

```
270 ltx.__tag.tables.role_tag_attribute = {}
271 ltx.__tag.tables.role_attribute_tag = {}
```

(End of definition for `ltx.__tag.tables.role_tag_attribute.`)

```
ltx.__tag.func.alloctag
```

```
272 local __tag_alloctag =
273   function (tag)
274     if not ltx.__tag.tables.role_tag_attribute[tag] then
275       table.insert(ltx.__tag.tables.role_attribute_tag,tag)
```

```

276     ltx.__tag.tables.role_tag_attribute[tag]=#ltx.__tag.tables.role_attribute_tag
277     __tag_log ("Add "..tag.." "..ltx.__tag.tables.role_tag_attribute[tag],3)
278   end
279 end
280 ltx.__tag.func.alloctag = __tag_alloctag

```

(End of definition for `ltx.__tag.func.alloctag`.)

`--tag_get_num_from`  
`ltx.__tag.func.get_num_from`  
`ltx.__tag.func.output_num_from`

These functions take as argument a string `tag`, and return the number under which is it recorded (and so the attribute value). The first function outputs the number for lua, while the `output` function outputs to tex.

```

281 local __tag_get_num_from =
282   function (tag)
283     if ltx.__tag.tables.role_tag_attribute[tag] then
284       a= ltx.__tag.tables.role_tag_attribute[tag]
285     else
286       a= -1
287     end
288   return a
289 end
290
291 ltx.__tag.func.get_num_from = __tag_get_num_from
292
293 function ltx.__tag.func.output_num_from (tag)
294   local num = __tag_get_num_from (tag)
295   tex.sprint(catlatex,num)
296   if num == -1 then
297     __tag_log ("Unknown tag "..tag.." used")
298   end
299 end

```

(End of definition for `--tag_get_num_from`, `ltx.__tag.func.get_num_from`, and `ltx.__tag.func.output_num_from`.)

`--tag_get_tag_from`  
`ltx.__tag.func.get_tag_from`  
`ltx.__tag.func.output_tag_from`

These functions are the opposites to the previous function: they take as argument a number (the attribute value) and return the string `tag`. The first function outputs the string for lua, while the `output` function outputs to tex.

```

300 local __tag_get_tag_from =
301   function (num)
302     if ltx.__tag.tables.role_attribute_tag[num] then
303       a = ltx.__tag.tables.role_attribute_tag[num]
304     else
305       a= "UNKNOWN"
306     end
307   return a
308 end
309
310 ltx.__tag.func.get_tag_from = __tag_get_tag_from
311
312 function ltx.__tag.func.output_tag_from (num)
313   tex.sprint(catlatex,__tag_get_tag_from (num))
314 end

```

(End of definition for `--tag_get_tag_from`, `ltx.__tag.func.get_tag_from`, and `ltx.__tag.func.output_tag_from`.)

ltx.\_\_tag.func.store\_mc\_data This function stores for `key`=`data` for mc-chunk `num`. It is used in the tagpdf-mc code, to store for example the tag string, and the raw options.

```

315 function ltx.__tag.func.store_mc_data (num,key,data)
316   ltx.__tag.mc[num] = ltx.__tag.mc[num] or { }
317   ltx.__tag.mc[num][key] = data
318   --tag_log ("INFO TEX-STORE-MC-DATA: "..num.." => ..tostring(key).. => ..tostring(data),3
319 end

```

(End of definition for `ltx.__tag.func.store_mc_data.`)

ltx.\_\_tag.func.store\_mc\_label This function stores the `label`=`num` relationship in the `labels` subtable. TODO: this is probably unused and can go.

```

320 function ltx.__tag.func.store_mc_label (label,num)
321   ltx.__tag.mc["labels"] = ltx.__tag.mc["labels"] or { }
322   ltx.__tag.mc.labels[label] = num
323 end

```

(End of definition for `ltx.__tag.func.store_mc_label.`)

ltx.\_\_tag.func.store\_mc\_kid This function is used in the traversing code. It stores a sub-chunk of a mc `mcnum` into the `kids` table.

```

324 function ltx.__tag.func.store_mc_kid (mcnum,kid,page)
325   ltx.__tag.trace.log("INFO TAG-STORE-MC-KID: "..mcnum.." => .. kid.. on page .. page",3)
326   ltx.__tag.mc[mcnum]["kids"] = ltx.__tag.mc[mcnum]["kids"] or { }
327   local kidtable = {kid=kid,page=page}
328   tableinsert(ltx.__tag.mc[mcnum]["kids"], kidtable )
329 end

```

(End of definition for `ltx.__tag.func.store_mc_kid.`)

ltx.\_\_tag.func.mc\_num\_of\_kids This function returns the number of kids a mc `mcnum` has. We need to account for the case that a mc can have no kids.

```

330 function ltx.__tag.func.mc_num_of_kids (mcnum)
331   local num = 0
332   if ltx.__tag.mc[mcnum] and ltx.__tag.mc[mcnum]["kids"] then
333     num = #ltx.__tag.mc[mcnum]["kids"]
334   end
335   ltx.__tag.trace.log ("INFO MC-KID-NUMBERS: .. mcnum .. "has" .. num .. "KIDS",4)
336   return num
337 end

```

(End of definition for `ltx.__tag.func.mc_num_of_kids.`)

### 3.2 Functions to insert the pdf literals

This insert the emc node. We support also dvips and dvipdfmx backend

```

338 local __tag_backend_create_emc_node
339 if tex.outputmode == 0 then
340   if token.get_macro("c_sys_backend_str") == "dvipdfmx" then
341     function __tag_backend_create_emc_node ()
342       local emcnode = nodenew("whatsit","special")
343       emcnode.data = "pdf:code EMC"
344       return emcnode
345     end

```

```

346   else -- assume a dvips variant
347     function __tag_backend_create_emc_node ()
348       local emcnode = nodenew("whatsit","special")
349         emcnode.data = "ps:SDict begin mark /EMC pdfmark end"
350       return emcnode
351     end
352   end
353 else -- pdf mode
354   function __tag_backend_create_emc_node ()
355     local emcnode = nodenew("whatsit","pdf_literal")
356       emcnode.data = "EMC"
357       emcnode.mode=1
358     return emcnode
359   end
360 end
361
362 local function __tag_insert_emc_node (head,current)
363   local emcnode= __tag_backend_create_emc_node()
364   head = node.insert_before(head,current,emcnode)
365   return head
366 end

```

(End of definition for `__tag_backend_create_emc_node` and `__tag_insert_emc_node`.)

`__tag_backend_create_bmc_node`

`__tag_insert_bmc_node`

```

367 local __tag_backend_create_bmc_node
368 if tex.outputmode == 0 then
369   if token.get_macro("c_sys_backend_str") == "dvipdfmx" then
370     function __tag_backend_create_bmc_node (tag)
371       local bmcnode = nodenew("whatsit","special")
372         bmcnode.data = "pdf:code /"..tag.." BMC"
373       return bmcnode
374     end
375   else -- assume a dvips variant
376     function __tag_backend_create_bmc_node (tag)
377       local bmcnode = nodenew("whatsit","special")
378         bmcnode.data = "ps:SDict begin mark/"..tag.." /BMC pdfmark end"
379       return bmcnode
380     end
381   end
382 else -- pdf mode
383   function __tag_backend_create_bmc_node (tag)
384     local bmcnode = nodenew("whatsit","pdf_literal")
385       bmcnode.data = "/"..tag.." BMC"
386       bmcnode.mode=1
387     return bmcnode
388   end
389 end
390
391 local function __tag_insert_bmc_node (head,current,tag)
392   local bmcnode = __tag_backend_create_bmc_node (tag)
393   head = node.insert_before(head,current,bmcnode)
394   return head
395 end

```

(End of definition for `--tag_backend_create_bmc_node` and `--tag_insert_bmc_node`.)

`--tag_backend_create_bdc_node`  
`--tag_insert_bdc_node`

This inserts a bcd node with a fix dict. TODO: check if this is still used, now that we create properties.

```
396 local --tag_backend_create_bdc_node
397
398 if tex.outputmode == 0 then
399   if token.get_macro("c_sys_backend_str") == "dvipdfmx" then
400     function --tag_backend_create_bdc_node (tag,dict)
401       local bdcnode = nodenew("whatsit","special")
402       bdcnode.data = "pdf:code /"..tag.."<"..dict..">> BDC"
403       return bdcnode
404     end
405   else -- assume a dvips variant
406     function --tag_backend_create_bdc_node (tag,dict)
407       local bdcnode = nodenew("whatsit","special")
408       bdcnode.data = "ps:SDict begin mark/"..tag.."<"..dict..">> /BDC pdfmark end"
409       return bdcnode
410     end
411   end
412 else -- pdf mode
413   function --tag_backend_create_bdc_node (tag,dict)
414     local bdcnode = nodenew("whatsit","pdf_literal")
415     bdcnode.data = "/"..tag.."<"..dict..">> BDC"
416     bdcnode.mode=1
417     return bdcnode
418   end
419 end
420
421 local function --tag_insert_bdc_node (head,current,tag,dict)
422   bdcnode= --tag_backend_create_bdc_node (tag,dict)
423   head = node.insert_before(head,current,bdcnode)
424   return head
425 end
```

(End of definition for `--tag_backend_create_bdc_node` and `--tag_insert_bdc_node`.)

`--tag_pdf_object_ref`

This allows to reference a pdf object reserved with the l3pdf command by name. The return value is n 0 R, if the object doesn't exist, n is 0.

```
426 local function --tag_pdf_object_ref (name,index)
427   local object
428   if ltx.pdf.object_id then
429     object = ltx.pdf.object_id (name,index) ..' 0 R'
430   else
431     local tokenname = 'c__pdf_object_..'..name..'/..index..'_int'
432     object = token.create(tokenname).mode ..' 0 R'
433   end
434   return object
435 end
436 ltx.--tag.func.pdf_object_ref = --tag_pdf_object_ref
```

(End of definition for `--tag_pdf_object_ref`.)

## 4 Function for the real space chars

`--tag_show_spacemark` A debugging function, it is used to inserts red color markers in the places where space chars can go, it can have side effects so not always reliable, but ok.

```

437 local function __tag_show_spacemark (head,current,color,height)
438   local markcolor = color or "1 0 0"
439   local markheight = height or 10
440   local pdfstring
441   if tex.outputmode == 0 then
442     -- ignore dvi mode for now
443   else
444     pdfstring = node.new("whatsit","pdf_literal")
445     pdfstring.data =
446     string.format("q ..markcolor.." RG "..markcolor.." rg 0.4 w 0 %g m 0 %g l S Q",-
447       3,markheight)
448     head = node.insert_after(head,current,pdfstring)
449   end
450 end

```

(End of definition for `--tag_show_spacemark`.)

`_tag_fakespace` This is used to define a lua version of \pdffakespace  
`ltx.__tag.func.fakespace`

```

451 local function __tag_fakespace()
452   tex.setattribute(iwspaceattributeid,1)
453   tex.setattribute(iwfontattributeid,font.current())
454 end
455 ltx.__tag.func.fakespace = __tag_fakespace

```

(End of definition for `_tag_fakespace` and `ltx.__tag.func.fakespace`.)

`_tag_mark_spaces` a function to mark up places where real space chars should be inserted. It only sets attributes, these are then be used in a later traversing which inserts the actual spaces. When space handling is activated this function is inserted in some callbacks.

```

456 --[[ a function to mark up places where real space chars should be inserted
457   it only sets an attribute.
458 --]]
459
460 local function __tag_mark_spaces (head)
461   local inside_math = false
462   for n in nodetraverse(head) do
463     local id = n.id
464     if id == GLYPH then
465       local glyph = n
466       default_currenfontid = glyph.font
467       if glyph.next and (glyph.next.id == GLUE)
468         and not inside_math and (glyph.next.width >0)
469       then
470         nodesetattribute(glyph.next,iwspaceattributeid,1)
471         nodesetattribute(glyph.next,iwfontattributeid,glyph.font)
472         -- for debugging
473         if ltx.__tag.trace.showspaces then
474           __tag_show_spacemark (head,glyph)
475         end

```

```

476     elseif glyph.next and (glyph.next.id==KERN) and not inside_math then
477         local kern = glyph.next
478         if kern.next and (kern.next.id== GLUE) and (kern.next.width >0)
479             then
480                 nodesetattribute(kern.next,iwspaceattributeid,1)
481                 nodesetattribute(kern.next,iwfontattributeid,glyph.font)
482             end
483         end
484         -- look also back
485         if glyph.prev and (glyph.prev.id == GLUE)
486             and not inside_math
487             and (glyph.prev.width >0)
488             and not nodehasattribute(glyph.prev,iwspaceattributeid)
489         then
490             nodesetattribute(glyph.prev,iwspaceattributeid,1)
491             nodesetattribute(glyph.prev,iwfontattributeid,glyph.font)
492             -- for debugging
493             if ltx._tag.trace.showspaces then
494                 _tag_show_spacemark (head,glyph)
495             end
496         end
497         elseif id == PENALTY then
498             local glyph = n
499             -- ltx._tag.trace.log ("PENALTY ".. n.subtype.."VALUE"..n.penalty,3)
500             if glyph.next and (glyph.next.id == GLUE)
501                 and not inside_math and (glyph.next.width >0) and n.subtype==0
502             then
503                 nodesetattribute(glyph.next,iwspaceattributeid,1)
504                 -- changed 2024-01-18, issue #72
505                 nodesetattribute(glyph.next,iwfontattributeid,default_currenfontid)
506                 -- for debugging
507                 if ltx._tag.trace.showspaces then
508                     _tag_show_spacemark (head,glyph)
509                 end
510             end
511             elseif id == MATH then
512                 inside_math = (n.subtype == 0)
513             end
514         end
515         return head
516     end

```

(End of definition for `_tag_mark_spaces`.)

`_tag_activate_mark_space`  
`ltx._tag.func.markspaceon`  
`ltx._tag.func.markspaceoff`

These functions add/remove the function which marks the spaces to the callbacks `pre_linebreak_filter` and `hpack_filter`

```

517 local function _tag_activate_mark_space ()
518     if not luatexbase.in_callback ("pre_linebreak_filter","markspaces") then
519         luatexbase.add_to_callback("pre_linebreak_filter",_tag_mark_spaces,"markspaces")
520         luatexbase.add_to_callback("hpack_filter",_tag_mark_spaces,"markspaces")
521     end
522 end
523
524 ltx._tag.func.markspaceon=_tag_activate_mark_space

```

```

525
526 local function __tag_deactivate_mark_space ()
527 if luatexbase.in_callback ("pre_linebreak_filter","markspaces") then
528 luatexbase.remove_from_callback("pre_linebreak_filter","markspaces")
529 luatexbase.remove_from_callback("hpack_filter","markspaces")
530 end
531 end
532
533 ltx.__tag.func.markspaceoff=__tag_deactivate_mark_space

```

(End of definition for `__tag_activate_mark_space`, `ltx.__tag.func.markspaceon`, and `ltx.__tag.func.markspaceoff`).  
We need two local variable to setup a default space char.

```

534 local default_space_char = nodenew(GLYPH)
535 local default_fontid      = fontid("TU/lmr/m/n/10")
536 local default_currfontid = fontid("TU/lmr/m/n/10")
537 default_space_char.char = 32
538 default_space_char.font = default_fontid

```

And a function to check as best as possible if a font has a space:

```

539 local function __tag_font_has_space (fontid)
540 t= fonts.hashes.identifiers[fontid]
541 if luaotfloat.aux.slot_of_name(fontid,"space")

`--tag_space_chars_shipout`  
`ltx.__tag.func.space_chars_shipout`

These is the main function to insert real space chars. It inserts a glyph before every glue which has been marked previously. The attributes are copied from the glue, so if the tagging is done later, it will be tagged like it.

```

549 local function __tag_space_chars_shipout (box)
550 local head = box.head
551 if head then
552 for n in node.traverse(head) do
553 local spaceattr = -1
554 if not nodehasattribute(n,iwspaceOffattributeid) then
555 spaceattr = nodegetattribute(n,iwspaceattributeid) or -1
556 end
557 if n.id == HLIST then -- enter the hlist
558 __tag_space_chars_shipout (n)
559 elseif n.id == VLIST then -- enter the vlist
560 __tag_space_chars_shipout (n)
561 elseif n.id == GLUE then
562 if ltx.__tag.trace.showspace and spaceattr==1 then
563 __tag_show_spacemark (head,n,"0 1 0")
564 end
565 if spaceattr==1 then
566 local space
567 local space_char = node.copy(default_space_char)
568 local curfont      = nodegetattribute(n,iwfontattributeid)
569 ltx.__tag.trace.log ("INFO SPACE-FUNCTION-FONT: ... tostring(curfont),3)

```

```

570         if curfont and
571             -- luatofloat.aux.slot_of_name(curfont,"space")
572             __tag_font_has_space (curfont)
573         then
574             space_char.font=curfont
575         end

578         space.attr   = n.attr
579     end
580   end
581 end
582 box.head = head
583 end
584 end
585
586 function ltx.__tag.func.space_chars_shipout (box)
587   __tag_space_chars_shipout (box)
588 end

```

(End of definition for `__tag_space_chars_shipout` and `ltx.__tag.func.space_chars_shipout`.)

## 5 Function for the tagging

`ltx.__tag.func.mc_insert_kids`

This is the main function to insert the K entry into a StructElem object. It is used in tagpdf-mc-luacode module. The `single` attribute allows to handle the case that a single mc on the tex side can have more than one kid after the processing here, and so we get the correct array/non array setup.

```

589 function ltx.__tag.func.mc_insert_kids (mcnum,single)
590   if ltx.__tag.mc[mcnum] then
591     ltx.__tag.trace.log("INFO TEX-MC-INSERT-KID-TEST: " .. mcnum,4)
592     if ltx.__tag.mc[mcnum] ["kids"] then
593       if #ltx.__tag.mc[mcnum] ["kids"] > 1 and single==1 then
594         tex.sprint("[")
595       end
596       for i,kidstable in ipairs( ltx.__tag.mc[mcnum] ["kids"] ) do
597         local kidnum  = kidstable["kid"]
598         local kidpage = kidstable["page"]
599         local kidpageobjnum = pdfpageref(kidpage)
600         ltx.__tag.trace.log("INFO TEX-MC-INSERT-KID: " .. mcnum ..
601                           " insert KID " .. .
602                           " with num " .. kidnum ..
603                           " on page " .. kidpage.."/"..kidpageobjnum,3)
604         tex.sprint(catlatex,"</Type /MCR /Pg "..kidpageobjnum .. " 0 R /MCID "..kidnum.. ">> ")
605       end
606       if #ltx.__tag.mc[mcnum] ["kids"] > 1 and single==1 then
607         tex.sprint("]")
608       end
609     else
610       -- this is typically not a problem, e.g. empty hbox in footer/header can
611       -- trigger this warning.
612       ltx.__tag.trace.log("WARN TEX-MC-INSERT-NO-KIDS: "..mcnum.." has no kids",2)
613       if single==1 then

```

```

614     tex.sprint("null")
615   end
616 end
617 else
618   ltx._tag.trace.log("WARN TEX-MC-INSERT-MISSING: '..mcnum..' doesn't exist",0)
619 end
620 end

```

(End of definition for `ltx._tag.func.mc_insert_kids.`)

`ltx._tag.func.store_struct_mcabs`

This function is used in the tagpdf-mc-luacode. It store the absolute count of the mc into the current structure. This must be done ordered.

```

621 function ltx._tag.func.store_struct_mcabs (structnum,mcnum)
622   ltx._tag.struct[structnum]=ltx._tag.struct[structnum] or {}
623   ltx._tag.struct[structnum]["mc"]=ltx._tag.struct[structnum]["mc"] or {}
624   -- a structure can contain more than one mc chunk, the content should be ordered
625   tableinsert(ltx._tag.struct[structnum]["mc"],mcnum)
626   ltx._tag.trace.log("INFO TEX-MC-INTO-STRUCT: ...
627                         mcnum.." inserted in struct "..structnum,3)
628   -- but every mc can only be in one structure
629   ltx._tag.mc[mcnum]= ltx._tag.mc[mcnum] or {}
630   ltx._tag.mc[mcnum]["parent"] = structnum
631 end
632

```

(End of definition for `ltx._tag.func.store_struct_mcabs.`)

`ltx._tag.func.store_mc_in_page`

This is used in the traversing code and stores the relation between abs count and page count.

```

633 -- pay attention: lua counts arrays from 1, tex pages from one
634 -- mcid and arrays in pdf count from 0.
635 function ltx._tag.func.store_mc_in_page (mcnum,mcpagecnt,page)
636   ltx._tag.page[page] = ltx._tag.page[page] or {}
637   ltx._tag.page[page][mcpagecnt] = mcnum
638   ltx._tag.trace.log("INFO TAG-MC-INTO-PAGE: page " .. page ..
639                         ": inserting MCID " .. mcpagecnt .. " => " .. mcnum,3)
640 end

```

(End of definition for `ltx._tag.func.store_mc_in_page.`)

`ltx._tag.func.update_mc_attributes`

This updates the mc-attributes of a box. It should only be used on boxes which don't contain structure elements. The arguments are a box, the mc-num and the type (as a number)

```

641 local function __tag_update_mc_attributes (head,mcnum,type)
642   for n in node.traverse(head) do
643     node.set_attribute(n,mccntattributeid,mcnum)
644     node.set_attribute(n,mctypeattributeid,type)
645     if n.id == HLIST or n.id == VLIST then
646       __tag_update_mc_attributes (n.list,mcnum,type)
647     end
648   end
649   return head
650 end
651 ltx._tag.func.update_mc_attributes = __tag_update_mc_attributes

```

(End of definition for `ltx._tag.func.update_mc_attributes`.)

`ltx._tag.func.mark_page_elements`

This is the main traversing function. See the lua comment for more details.

```
652 --[[  
653     Now follows the core function  
654     It wades through the shipout box and checks the attributes  
655     ARGUMENTS  
656     box: is a box,  
657     mcpagecnt: num, the current page cnt of mc (should start at -1 in shipout box), needed fo  
658     mccntprev: num, the attribute cnt of the previous node/whatever - if different we have a  
659     mcopen: num, records if some bdc/emc is open  
660     These arguments are only needed for log messages, if not present are replaces by fix strin  
661     name: string to describe the box  
662     mctypeprev: num, the type attribute of the previous node/whatever  
663  
664     there are lots of logging messages currently. Should be cleaned up in due course.  
665     One should also find ways to make the function shorter.

# Part IX

## The **tagpdf-roles** module

### Tags, roles and namespace code

### Part of the tagpdf package

---

```
add-new-tag_{(setup-key)
tag_{(rolemap-key)
namespace_{(rolemap-key)
role_{(rolemap-key)
role-namespace_{(rolemap-key)}
```

The **add-new-tag** key can be used in `\tagpdfsetup` to declare and rolemap new tags. It takes as value a key-value list or a simple **new-tag/old-tag**.

The key-value list knows the following keys:

**tag** This is the name of the new tag as it should then be used in `\tagstructbegin`.

**namespace** This is the namespace of the new tag. The value should be a shorthand of a namespace. The allowed values are currently `pdf`, `pdf2`, `mathml`, `latex`, `latex-book` and `user`. The default value (and recommended value for a new tag) is `user`. The public name of the user namespace is `tag/NS/user`. This can be used to reference the namespace e.g. in attributes.

**role** This is the tag the tag should be mapped too. In a PDF 1.7 or earlier this is normally a tag from the `pdf` set, in PDF 2.0 from the `pdf`, `pdf2` and `mathml` set. It can also be a user tag. The tag must be declared before, as the code retrieves the class of the new tag from it. The PDF format allows mapping to be done transitively. But tagpdf can't/won't check such unusual role mapping.

**role-namespace** If the role is a known tag the default value is the default namespace of this tag. With this key a specific namespace can be forced.

Namespaces are mostly a PDF 2.0 property, but it doesn't harm to set them also in a PDF 1.7 or earlier.

---

```
\tag_check_child:n{TF} \tag_check_child:n{n{\langle tag \rangle}{\langle namespace \rangle}} {\langle true code \rangle} {\langle false code \rangle}
```

This checks if the tag `\langle tag \rangle` from the name space `\langle namespace \rangle` can be used at the current position. In tagpdf-base it is always true.

```

5 </header>
```

## 1 Code related to roles and structure names

```
6  {*package}
```

## 1.1 Variables

Tags are used in structures (\tagstructbegin) and mc-chunks (\tagmcbegin).

They have a name (a string), in lua a number (for the lua attribute), and in PDF 2.0 belong to one or more name spaces, with one being the default name space.

Tags of structures are classified, e.g. as grouping, inline or block level structure (and a few special classes like lists and tables), and must follow containments rules depending on their classification (for example a inline structure can not contain a block level structure). New tags inherit their classification from their rolemapping to the standard namespaces (pdf and/or pdf2). We store this classification as it will probably be needed for tests but currently the data is not much used. The classification for math (and the containment rules) is unclear currently and so not set.

The attribute number is only relevant in lua and only for the MC chunks (so tags with the same name from different names spaces can have the same number), and so only stored if luatex is detected.

Due to the namespaces the storing and processing of tags and there data are different in various places for PDF 2.0 and PDF <2.0, which makes things a bit difficult and leads to some duplications. Perhaps at some time there should be a clear split.

This are the main variables used by the code:

\g\_\_tag\_role\_tags\_NS\_prop This is the core list of tag names. It uses tags as keys and the shorthand (e.g. pdf2, or mathml) of the default name space as value.

In pdf 2.0 the value is needed in the structure dictionaries.

\g\_\_tag\_role\_tags\_class\_prop This contains for each tag a classification type. It is used in pdf <2.0.

\g\_\_tag\_role\_NS\_prop This contains the names spaces. The values are the object references. They are used in pdf 2.0.

\g\_\_tag\_role\_rolemap\_prop This contains for each tag the role to a standard tag. It is used in pdf<2.0 for tag checking and to fill at the end the RoleMap dictionary.

g\_@role/RoleMap\_dict This dictionary contains the standard rolemaps. It is relevant only for pdf <2.0.

\g\_\_tag\_role\_NS\_<ns>\_prop This prop contains the tags of a name space and their role. The props are also use for remapping. As value they contain two brace groups: tag and namespace. In pdf <2.0 the namespace is empty.

\g\_\_tag\_role\_NS\_<ns>\_class\_prop This prop contains the tags of a name space and their type. The value is only needed for pdf 2.0.

\g\_\_tag\_role\_index\_prop This prop contains the standard tags (pdf in pdf<2.0, pdf, pdf2 + mathml in pdf 2.0) as keys, the values are a two-digit number. These numbers are used to get the containment rule of two tags from the intarray.

\l\_\_tag\_role\_debug\_prop This property is used to pass some info around for info messages or debugging.

\g\\_tag\\_role\\_tags\\_NS\\_prop This is the core list of tag names. It uses tags as keys and the shorthand (e.g. pdf2, or mathml) of the default name space as value. We store the default name space also in pdf <2.0, even if not needed: it doesn't harm and simplifies the code. There is no need to access this from lua, so we use the standard prop commands.

*7 \prop\_new:N \g\\_tag\\_role\\_tags\\_NS\\_prop*

*(End of definition for \g\\_tag\\_role\\_tags\\_NS\\_prop.)*

\g\\_tag\\_role\\_tags\\_class\\_prop With pdf 2.0 we store the class in the NS dependant props. With pdf <2.0 we store for now the type(s) of a tag in a common prop. Tags that are rolemapped should get the type from the target.

*8 \prop\_new:N \g\\_tag\\_role\\_tags\\_class\\_prop*

*(End of definition for \g\\_tag\\_role\\_tags\\_class\\_prop.)*

\g\\_tag\\_role\\_NS\\_prop This holds the list of supported name spaces. The keys are the name tagpdf will use, the values the object reference. The urls identifier are stored in related dict object.

**mathml** <http://www.w3.org/1998/Math/MathML>

**pdf2** <http://iso.org/pdf2/ssn>

**pdf** <http://iso.org/pdf/ssn> (default)

**user** \c\\_tag\\_role\\_userNS\\_id\\_str (random id, for user tags)

**latex** <https://www.latex-project.org/ns/dflt/2022>

**latex-book** <https://www.latex-project.org/ns/book/2022>

More namespaces are possible and their objects references and their rolemaps must be collected so that an array can be written to the StructTreeRoot at the end (see tagpdf-tree). We use a prop to store the object reference as it will be needed rather often.

*9 \prop\_new:N \g\\_tag\\_role\\_NS\\_prop*

*(End of definition for \g\\_tag\\_role\\_NS\\_prop.)*

\g\\_tag\\_role\\_index\\_prop This prop contains the standard tags (pdf in pdf<2.0, pdf, pdf2 + mathml in pdf 2.0) as keys, the values are a two-digit number. These numbers are used to get the containment rule of two tags from the intarray.

*10 \prop\_new:N \g\\_tag\\_role\\_index\\_prop*

*(End of definition for \g\\_tag\\_role\\_index\\_prop.)*

\l\\_tag\\_role\\_debug\\_prop This variable is used to pass more infos to debug messages.

*11 \prop\_new:N \l\\_tag\\_role\\_debug\\_prop*

*(End of definition for \l\\_tag\\_role\\_debug\\_prop.)*

We need also a bunch of temporary variables.

```
\l\_tag\_role\_tag\_tmpa\_tl
\l\_tag\_role\_tag\_namespace\_tmpa\_tl
\l\_tag\_role\_tag\_namespace\_tmpb\_tl
\l\_tag\_role\_role\_tmpa\_tl
\l\_tag\_role\_role\_namespace\_tmpa\_tl
\l\_tag\_role\_tmpa\_seq
```

*12 \tl\_new:N \l\\_tag\\_role\\_tag\\_tmpa\\_tl*

*13 \tl\_new:N \l\\_tag\\_role\\_tag\\_namespace\\_tmpa\\_tl*

*14 \tl\_new:N \l\\_tag\\_role\\_tag\\_namespace\\_tmpb\\_tl*

*15 \tl\_new:N \l\\_tag\\_role\\_role\\_tmpa\\_tl*

*16 \tl\_new:N \l\\_tag\\_role\\_role\\_namespace\\_tmpa\\_tl*

*17 \seq\_new:N \l\\_tag\\_role\\_tmpa\\_seq*

*(End of definition for \l\\_tag\\_role\\_tag\\_tmpa\\_tl and others.)*

## 1.2 Namespaces

The following commands setups a name space. With pdf version <2.0 this is only a prop with the rolemap. With pdf 2.0 a dictionary must be set up. Such a name space dictionaries can contain an optional /Schema and /RoleMapNS entry. We only reserve the objects but delay the writing to the finish code, where we can test if the keys and the name spaces are actually needed. This commands setups objects for the name space and its rolemap. It also initialize a dict to collect the rolemaps if needed, and a property with the tags of the name space and their rolemapping for loops. It is unclear if a reference to a schema file will be ever needed, but it doesn't harm ....

This is the object which contains the normal RoleMap. It is probably not needed in pdf 2.0 but currently kept.

```

18 \pdfdict_new:n {g__tag_role/RoleMap_dict}
19 \prop_new:N \g__tag_role_rolemap_prop

(End of definition for g__tag_role/RoleMap_dict and \g__tag_role_rolemap_prop.)
```

---

```
\__tag_role_NS_new:nnn \__tag_role_NS_new:nnn{<shorthand>}{{URI-ID}}Schema
```

---

```
\__tag_role_NS_new:nnn
```

```

20 \pdf_version_compare:NnTF < {2.0}
21 {

26     \prop_gput:Nne \g__tag_role_NS_prop {#1}{}
27   }
28 }
29 {
30   \cs_new_protected:Npn \__tag_role_NS_new:nnn #1 #2 #3
31   {
32     \prop_new:c { g__tag_role_NS_#1_prop }
33     \prop_new:c { g__tag_role_NS_#1_class_prop }
34     \pdf_object_new:n {tag/NS/#1}
35     \pdfdict_new:n {g__tag_role/Namespace_#1_dict}
36     \pdf_object_new:n {_tag/RoleMapNS/#1}
37     \pdfdict_new:n {g__tag_role/RoleMapNS_#1_dict}
38     \pdfdict_gput:nnn
39       {g__tag_role/Namespace_#1_dict}
40       {Type}
41       {/Namespace}
42     \pdf_string_from_unicode:nnN{utf8/string}{{#2}}\l__tag_tmpa_str
43     \tl_if_empty:NF \l__tag_tmpa_str
44   {
45     \pdfdict_gput:nne
46       {g__tag_role/Namespace_#1_dict}
47       {NS}
48       {\l__tag_tmpa_str}
49   }
50   %RoleMapNS is added in tree
51   \tl_if_empty:NF {#3}
```

```

52     {
53         \pdfdict_gput:nne{g__tag_role/Namespace_#1_dict}
54             {Schema}{#3}
55     }
56     \prop_gput:Nne \g__tag_role_NS_prop {#1}{\pdf_object_ref:n{tag/NS/#1}~}
57 }
58 }
```

(End of definition for `\__tag_role_NS_new:nnn`.)

We need an id for the user space. For the tests it should be possible to set it to a fix value. So we use random numbers which can be fixed by setting a seed. We fake a sort of GUID but do not try to be really exact as it doesn't matter ...

`\c__tag_role_userNS_id_str`

```

59 \str_const:Nn \c__tag_role_userNS_id_str
60 { data:, 
61   \int_to_Hex:n{\int_rand:n {65535}}
62   \int_to_Hex:n{\int_rand:n {65535}}
63   -
64   \int_to_Hex:n{\int_rand:n {65535}}
65   -
66   \int_to_Hex:n{\int_rand:n {65535}}
67   -
68   \int_to_Hex:n{\int_rand:n {65535}}
69   -
70   \int_to_Hex:n{\int_rand:n {16777215}}
71   \int_to_Hex:n{\int_rand:n {16777215}}
72 }
```

(End of definition for `\c__tag_role_userNS_id_str`.)

Now we setup the standard names spaces. The mathml space is loaded also for pdf < 2.0 but not added to RoleMap unless a boolean is set to true with `tagpdf-setup{mathml-tags}`.

```

73 \bool_new:N \g__tag_role_add_mathml_bool
74 \__tag_role_NS_new:nnn {pdf} {http://iso.org/pdf/ssn}{}
75 \__tag_role_NS_new:nnn {pdf2} {http://iso.org/pdf2/ssn}{}
76 \__tag_role_NS_new:nnn {mathml}{http://www.w3.org/1998/Math/MathML}{}
77 \__tag_role_NS_new:nnn {latex} {https://www.latex-project.org/ns/dflt/2022}{}
78 \__tag_role_NS_new:nnn {latex-book} {https://www.latex-project.org/ns/book/2022}{}
79 \exp_args:Nne
80   \__tag_role_NS_new:nnn {user}{\c__tag_role_userNS_id_str}{}
```

### 1.3 Adding a new tag

Both when reading the files and when setting up a tag manually we have to store data in various places.

`\__tag_role_allotag:nnn`

This command allocates a new tag without role mapping. In the lua backend it will also record the attribute value.

```

81 \pdf_version_compare:NnTF < {2.0}
82 {
83   \sys_if_engine_luatex:TF
84 }
```

```

85   \cs_new_protected:Npn \__tag_role_alloctag:n #1 #2 #3 %#1 tagname, ns, type

242     }
243     {
244       \msg_warning:nnn { tag } {role-unknown-tag} { #1 }
245       \tl_set:Nn #3 {#1}
246       \tl_set:Nn #4 {#2}
247     }
248   }
249   {
250     \msg_warning:nnn { tag } {role-unknown-NS} { #2 }
251     \tl_set:Nn #3 {#1}
252     \tl_set:Nn #4 {#2}
253   }
254 }
255 \cs_generate_variant:Nn \__tag_role_get:nnNN {VVNN}
256 }

```

(End of definition for `\__tag_role_get:nnNN`.)

## 1.4 Helper command to read the data from files

In this section we setup the helper command to read namespace files.

```
\_\_tag\_role\_read\_namespace\_line:nw
```

This command will process a line in the name space file. The first argument is the name of the name space. The definition differ for pdf 2.0. as we have proper name spaces there. With pdf<2.0 special name spaces shouldn't update the default role or add to the rolemap again, they only store the values for later uses. We use a boolean here.

```

257 \bool_new:N\l__tag_role_update_bool
258 \bool_set_true:N \l__tag_role_update_bool
259 \pdf_version_compare:NnTF < {2.0}

315     }
316     \prop_gput:cnn {\g_tag_role_NS_#1_prop} {\#2}{\{ \#3 \} \{ \#4 \}}
317 }
318 }
319 }
```

(End of definition for `\l_tag_role_read_namespace:nw.`)

`\l_tag_role_read_namespace:nn` This command reads a namespace file in the format tagpdf-ns-XX.def

```

320 \cs_new_protected:Npn \l_tag_role_read_namespace:nn #1 #2 %name of namespace #2 name of file
321 {
322     \prop_if_exist:cF {\g_tag_role_NS_#1_prop}
323     { \msg_warning:nnn {\tag}{namespace-unknown}{\#1} }
324     \file_if_exist:nTF { tagpdf-ns-\#2.def }
325     {
326         \ior_open:Nn \g_tmpa_ior {tagpdf-ns-\#2.def}
327         \msg_info:nnn {\tag}{read-namespace}{\#2}
328         \ior_map_inline:Nn \g_tmpa_ior
329         {
330             \l_tag_role_read_namespace_line:nw {\#1} ##1,,,,\q_stop
331         }
332         \ior_close:N\g_tmpa_ior
333     }
334     {
335         \msg_info:nnn {\tag}{namespace-missing}{\#2}
336     }
337 }
```

(End of definition for `\l_tag_role_read_namespace:nn.`)

`\l_tag_role_read_namespace:n` This command reads the default namespace file.

```

339 \cs_new_protected:Npn \l_tag_role_read_namespace:n #1 %name of namespace
340 {
341     \l_tag_role_read_namespace:nn {\#1}{\#1}
342 }
```

(End of definition for `\l_tag_role_read_namespace:n.`)

## 1.5 Reading the default data

The order is important as we want pdf2 and latex as default: if two namespace define the same tag, the last one defines which one is used if the namespace is not explicitly given.

```
343 \__tag_role_read_namespace:n {pdf}
344 \__tag_role_read_namespace:n {pdf2}
345 \__tag_role_read_namespace:n {mathml}
```

in pdf 1.7 the following namespaces should only store the settings for later use:

```
346 \bool_set_false:N\l__tag_role_update_bool
347 \__tag_role_read_namespace:n {latex-book}
348 \bool_set_true:N\l__tag_role_update_bool
349 \__tag_role_read_namespace:n {latex}
350 \__tag_role_read_namespace:nn {latex} {latex-lab}
351 \__tag_role_read_namespace:n {pdf}
352 \__tag_role_read_namespace:n {pdf2}
```

But is the class provides a `\chapter` command then we switch

```
353 \pdf_version_compare:NnTF < {2.0}
354 {
355     \hook_gput_code:nnn {\begindocument}{tagpdf}
356     {
357         \cs_if_exist:NT \chapter
358         {
359             \prop_map_inline:cnn{g__tag_role_NS_latex-book_prop}
360             {
361                 \__tag_role_add_tag:ne {#1}{\use_i:nn #2\c_empty_t1\c_empty_t1}
362             }
363         }
364     }
365 }
366 {
367     \hook_gput_code:nnn {\begindocument}{tagpdf}
368     {
369         \cs_if_exist:NT \chapter
370         {
371             \prop_map_inline:cnn{g__tag_role_NS_latex-book_prop}
372             {
373                 \prop_gput:Nnn \g__tag_role_tags_NS_prop { #1 }{ latex-book }
374                 \prop_gput:Nne
375                 \g__tag_role_rolemap_prop {#1}{\use_i:nn #2\c_empty_t1\c_empty_t1}
376             }
377         }
378     }
379 }
```

## 1.6 Parent-child rules

PDF define various rules about which tag can be a child of another tag. The following code implements the matrix to allow to use it in tests.

```
\g__tag_role_parent_child_intarray
```

This intarray will store the rule as a number. For parent nm and child ij (n,m,i,j digits) the rule is at position nmij. As we have around 56 tags, we need roughly a size 6000.

```
380 \intarray_new:Nn \g__tag_role_parent_child_intarray {6000}
```

(End of definition for \g\_\_tag\_role\_parent\_child\_intarray.)

\c\_\_tag\_role\_rules\_prop  
\c\_\_tag\_role\_rules\_num\_prop These two properties map the rule strings to numbers and back. There are in tagpdf-data.dtx near the csv files for easier maintenance.

(End of definition for \c\_\_tag\_role\_rules\_prop and \c\_\_tag\_role\_rules\_num\_prop.)

\\_\\_tag\_store\_parent\_child\_rule:nnn The helper command is used to store the rule. It assumes that parent and child are given as 2-digit number!

```
381 \cs_new_protected:Npn \_\_tag_store_parent_child_rule:nnn #1 #2 #3 % num parent, num child, #3
382   {
383     \intarray_gset:Nnn \g__tag_role_parent_child_intarray
384     { #1#2 }{0\prop_item:Nn\c__tag_role_rules_prop{#3}}
385   }
```

(End of definition for \\_\\_tag\_store\_parent\_child\_rule:nnn.)

### 1.6.1 Reading in the csv-files

This counter will be used to identify the first (non-comment) line

```
386 \int_zero:N \l__tag_tmpa_int
```

Open the file depending on the PDF version

```
387 \pdf_version_compare:NnTF < {2.0}
388   {
389     \ior_open:Nn \g_tmpa_ior {tagpdf-parent-child.csv}
390   }
391   {
392     \ior_open:Nn \g_tmpa_ior {tagpdf-parent-child-2.csv}
393   }
```

Now the main loop over the file

```
394 \ior_map_inline:Nn \g_tmpa_ior
395   {
```

ignore lines containing only comments

```
396   \tl_if_empty:nF{#1}
397     {
```

count the lines ...

```
398     \int_incr:N\l__tag_tmpa_int
```

put the line into a seq. Attention! empty cells are dropped.

```
399   \seq_set_from_clist:Nn\l__tag_tmpa_seq { #1 }
400   \int_compare:nNnTF {\l__tag_tmpa_int}=1
```

This handles the header line. It gives the tags 2-digit numbers

```
401   {
402     \seq_map_indexed_inline:Nn \l__tag_tmpa_seq
403     {
404       \prop_gput:Nne\g__tag_role_index_prop
405         {##2}
406         {\int_compare:nNnT{##1}<{10}{0}##1}
407     }
408   }
```

now the data lines.

```

409      {
410          \seq_set_from_clist:Nn\l__tag_tmpa_seq { #1 }
get the name of the child tag from the first column
411          \seq_pop_left:NN\l__tag_tmpa_seq\l__tag_tmpa_t1
get the number of the child, and store it in \l__tag_tmpb_t1
412          \prop_get:NVN \g__tag_role_index_prop \l__tag_tmpa_t1 \l__tag_tmpb_t1
remove column 2+3
413          \seq_pop_left:NN\l__tag_tmpa_seq\l__tag_tmpa_t1
414          \seq_pop_left:NN\l__tag_tmpa_seq\l__tag_tmpa_t1

```

Now map over the rest. The index ##1 gives us the number of the parent, ##2 is the data.

```

415          \seq_map_indexed_inline:Nn \l__tag_tmpa_seq
416          {
417              \exp_args:Nne
418              \__tag_store_parent_child_rule:nnn {##1}{\l__tag_tmpb_t1}{##2}
419          }
420      }
421  }
422 }

```

close the read handle.

```
423 \ior_close:N\g_tmpa_ior
```

The Root, Hn and mathml tags are special and need to be added explicitly

```

424 \prop_get:NnN\g__tag_role_index_prop{StructTreeRoot}\l__tag_tmpa_t1
425 \prop_gput:Nne\g__tag_role_index_prop{Root}{\l__tag_tmpa_t1}
426 \prop_get:NnN\g__tag_role_index_prop{Hn}\l__tag_tmpa_t1
427 \pdf_version_compare:NnTF < {2.0}
428 {
429     \int_step_inline:nn{6}
430     {
431         \prop_gput:Nne\g__tag_role_index_prop{H#1}{\l__tag_tmpa_t1}
432     }
433 }
434 {
435     \int_step_inline:nn{10}
436     {
437         \prop_gput:Nne\g__tag_role_index_prop{H#1}{\l__tag_tmpa_t1}
438     }

```

all mathml tags are currently handled identically

```

439 \prop_get:NnN\g__tag_role_index_prop {mathml}\l__tag_tmpa_t1
440 \prop_get:NnN\g__tag_role_index_prop {math}\l__tag_tmpb_t1
441 \prop_map_inline:Nn \g__tag_role_NS_mathml_prop
442 {
443     \prop_gput:NnV\g__tag_role_index_prop{#1}\l__tag_tmpa_t1
444 }
445 \prop_gput:NnV\g__tag_role_index_prop{math}\l__tag_tmpb_t1
446 }

```

### 1.6.2 Retrieving the parent-child rule

\\_tag\\_role\\_get\\_parent\\_child\\_rule:nnnN  
This command retrieves the rule (as a number) and stores it in the tl-var. It assumes that the tag in #1 is a standard tag after role mapping for which a rule exist and is *not* one of Part, Div, NonStruct as the real parent has already been identified. #3 can be used to pass along data about the original tags and is only used in messages.

TODO check temporary variables. Check if the tl-var should be fix.

```
447 \tl_new:N \l__tag_parent_child_check_t1
448 \cs_new_protected:Npn \_tag_role_get_parent_child_rule:nnnN #1 #2 #3 #4
449   % #1 parent (string) #2 child (string) #3 text for messages (eg. about Div or Rolemapping)
450   % #4 tl for state
451   {
452     \prop_get:NnN \g__tag_role_index_prop{#1}\l__tag_tmpa_t1
453     \prop_get:NnN \g__tag_role_index_prop{#2}\l__tag_tmpb_t1
454     \bool_lazy_and:nnTF
455       { ! \quark_if_no_value_p:N \l__tag_tmpa_t1 }
456       { ! \quark_if_no_value_p:N \l__tag_tmpb_t1 }
457   }
```

Get the rule from the intarray

```
458   \tl_set:N#4
459   {
460     \intarray_item:Nn
461       \g__tag_role_parent_child_intarray
462         {\l__tag_tmpa_t1\l__tag_tmpb_t1}
463   }
```

If the state is something is wrong ...

```
464   \int_compare:nNnT
465     {#4} = {\prop_item:Nn\c__tag_role_rules_prop{}}
466     {
467       %warn ?
```

we must take the current child from the stack if is already there, depending on location the check is called, this could also remove the parent, but that is ok too.

```
468 }
```

This is the message, this can perhaps go into debug mode.

```
469   \group_begin:
470   \int_compare:nNnT {\l__tag_tmpa_int*\l__tag_loglevel_int} > { 0 }
471   {
472     \prop_get:NVNF\c__tag_role_rules_num_prop #4 \l__tag_tmpa_t1

497     { unknown! }
498   }
499 }
500 \cs_generate_variant:Nn\__tag_role_get_parent_child_rule:nnnN {VVVN,VVnN}

(End of definition for \__tag_role_get_parent_child_rule:nnnN.)

```

`--tag_check_parent_child:nnnn` This commands translates rolemaps its arguments and then calls `\__tag_role_get_parent_child_rule:nnnN`. It does not try to resolve inheritance of Div etc but instead warns that the rule can not be detected in this case. In pdf 2.0 the name spaces of the tags are relevant, so we have arguments for them, but in pdf <2.0 they are ignored and can be left empty.

```

501 \pdf_version_compare:NnTF < {2.0}
502   {
503     \cs_new_protected:Npn \__tag_check_parent_child:nnnnN #1 #2 #3 #4 #5
504     %#1 parent tag, #2 NS, #3 child tag, #4 NS, #5 tl var
505   }

```

for debugging messages we store the arguments.

```

506   \prop_put:Nnn \l__tag_role_debug_prop {parent} {#1}
507   \prop_put:Nnn \l__tag_role_debug_prop {child} {#3}

```

get the standard tags through rolemapping if needed at first the parent

```

508   \prop_get:NnNTF \g__tag_role_index_prop {#1}\l__tag_tmpa_tl
509   {
510     \tl_set:Nn \l__tag_tmpa_tl {#1}
511   }
512   {
513     \prop_get:NnNF \g__tag_role_rolemap_prop {#1}\l__tag_tmpa_tl
514     {
515       \tl_set:Nn \l__tag_tmpa_tl {\q_no_value}
516     }
517   }

```

now the child

```

518   \prop_get:NnNTF \g__tag_role_index_prop {#3}\l__tag_tmpb_tl
519   {
520     \tl_set:Nn \l__tag_tmpb_tl {#3}
521   }
522   {
523     \prop_get:NnNF \g__tag_role_rolemap_prop {#3}\l__tag_tmpb_tl
524     {
525       \tl_set:Nn \l__tag_tmpb_tl {\q_no_value}
526     }
527   }

```

if we got tags for parent and child we call the checking command

```

528     \bool_lazy_and:nTF
529         { ! \quark_if_no_value_p:N \l__tag_tmpa_tl }
530         { ! \quark_if_no_value_p:N \l__tag_tmpb_tl }
531         {
532             \__tag_role_get_parent_child_rule:VVnN
533                 \l__tag_tmpa_tl \l__tag_tmpb_tl
534                 {Rolemapped~from:~'#1'~~~>~'#3'}
535                 #5
536         }
537         {
538             \tl_set:Nn #5 {0}
539             \msg_warning:nneee
540                 { tag }
541                 {role-parent-child}
542                 { #1 }
543                 { #3 }
544                 { unknown! }
545         }
546     }
547     \cs_new_protected:Npn \__tag_check_parent_child:nnN #1#2#3
548     {
549         \__tag_check_parent_child:nnnn {#1}{}{#2}{}#3
550     }
551 }
```

and now the pdf 2.0 version The version with three arguments retrieves the default names space and then calls the full command. Not sure if this will ever be needed but we leave it for now.

```

552     {
553     \cs_new_protected:Npn \__tag_check_parent_child:nnN #1 #2 #3

665     \l__tag_get_parent_tmpa_tl
666     \l__tag_get_parent_tmpb_tl
667     \__tag_check_parent_child:VVnnN
668     \l__tag_get_parent_tmpa_tl
669     \l__tag_get_parent_tmpb_tl
670     {#1}{#2}
671     \l__tag_parent_child_check_tl
672     \int_compare:nNnTF { \l__tag_parent_child_check_tl } < {0}

```

```

673      {\prg_return_false:}
674      {\prg_return_true:}
675  }

```

(End of definition for \tag\_check\_child:nTF. This function is documented on page 156.)

## 1.7 Remapping of tags

In some context it can be necessary to remap or replace the tags. That means instead of tag=H1 or tag=section one wants the effect of tag=Span. Or instead of tag=P one wants tag=Code.

The following command provide some general interface for this. The core idea is that before a tag is set it is fed through a function that can change it. We want to be able to chain such functions, so all of them manipulate the same variables.

```

\l__tag_role_remap_tag_tl
\l__tag_role_remap_NS_tl
676  \tl_new:N \l__tag_role_remap_tag_tl
677  \tl_new:N \l__tag_role_remap_NS_tl

```

(End of definition for \l\_\_tag\_role\_remap\_tag\_tl and \l\_\_tag\_role\_remap\_NS\_tl.)

\\_\\_tag\\_role\\_remap: This function is used in the structure and the mc code before using a tag. By default it does nothing with the tl vars. Perhaps this should be a hook?

```
678  \cs_new_protected:Npn \_\_tag\_role\_remap: { }
```

(End of definition for \\_\\_tag\\_role\\_remap:.)

\\_\\_tag\\_role\\_remap\\_id: This is copy in case we have to restore the main command.

```
679  \cs_set_eq:NN \_\_tag\_role\_remap_id: \_\_tag\_role\_remap:
```

(End of definition for \\_\\_tag\\_role\\_remap\\_id:.)

## 1.8 Key-val user interface

The user interface uses the key add-new-tag, which takes either a keyval list as argument, or a tag/role.

```

tag_(rolemap-key)
tag-namespace_(rolemap-key)
  role_(rolemap-key)
role-namespace_(rolemap-key)
  role/new-tag_(setup-key)
add-new-tag_(deprecated)

680  \keys_define:nn { __tag / tag-role }
681  {
682    ,tag .tl_set:N = \l__tag_role_tag_tmpa_tl

742 }
743 
```

(End of definition for tag `(rolemap-key)` and others. These functions are documented on page 156.)

## Part X

# The **tagpdf-space** module

## Code related to real space chars

### Part of the tagpdf package

---

`activate/spaceU(setup-key)`  
`interwordspaceU(deprecated)`

---

This key allows to activate/deactivate the real space chars if the engine supports it. The allowed values are `true`, `on`, `false`, `off`. The old name of the key `interwordspace` is still supported but deprecated.

---

`show-spacesU(deprecated)`

---

This key is deprecated. Use `debug/show=spaces` instead. This key works only with luatex and shows with small red bars where spaces have been inserted. This is only for debugging and is not completely reliable (and change affect other literals and tagging), so it should be used with care.

```
1 <@@=tag>
2 <*header>
3 \ProvidesExplPackage {tagpdf-space-code} {2024-04-12} {0.99b}
4 {part of tagpdf - code related to real space chars}
5 </header>
```

## 1 Code for interword spaces

The code is engine/backend dependant. Basically only pdftex and luatex support real space chars. Most of the code for luatex which uses attributes is in the lua code, here are only the keys.

```
activate/spacesU(setup-key)
interwordspaceU(deprecated)
show-spacesU(deprecated)
6 <*package>
7 \keys_define:nn { __tag / setup }

58     activate/spaces/false .code:n =
59     {
60       \bool_gset_false:N \g__tag_active_space_bool
61       \lua_now:e{ltx.__tag.func.markspaceoff()}
62     },
63     activate/spaces .default:n = true,
64     debug/show/spaces .code:n =
65       { \lua_now:e{ltx.__tag.trace.showspaces=true} },
66     debug/show/spacesOff .code:n =
67       { \lua_now:e{ltx.__tag.trace.showspaces=nil} },
68   }
69 }

```

(End of definition for `activate/spaces` (setup-key), `interwordspace` (deprecated), and `show-spaces` (deprecated). These functions are documented on page 6.)

`\__tag_fakespace:` For luatex we need a command for the fake space as equivalent of the pdftex primitive.

```

70 \sys_if_engine_luatex:T
71   {
72     \cs_new_protected:Nn \__tag_fakespace:
73     {
74       \group_begin:
75       \lua_now:e{\ltx_\_tag_func.fakespace()}
76       \skip_horizontal:n{\c_zero_skip}
77       \group_end:
78     }
79   }

```

We need also a command to interrupt the insertion of real space chars in places where we want to insert manually special spaces. In pdftex this can be done with `\pdfinterwordspaceoff` and `\pdfinterwordspaceon`. These commands insert what-sits and this mean they act globally. In luatex a attribute is used to this effect, for consistency this is also set globally.

The off command sets the attributes in luatex.

```

\tag_spacechar_on: 80 \cs_new_protected:Npn \tag_spacechar_off: {}
\tag_spacechar_off: 81 \cs_new_protected:Npn \tag_spacechar_on: {}

82
83 \sys_if_engine_luatex:T
84   {
85     \cs_set_protected:Npn \tag_spacechar_off:
86     {
87       \lua_now:e
88       {
89         \tex.setattribute
90         (
91           "global",
92           luatexbase.attributes.g_\_tag_interwordspaceOff_attr,
93           1
94         )
95       }
96     }
97     \cs_set_protected:Npn \tag_spacechar_on:
98     {
99       \lua_now:e
100      {
101        \tex.setattribute
102        (
103          "global",
104          luatexbase.attributes.g_\_tag_interwordspaceOff_attr,
105          -2147483647
106        )
107      }
108    }
109  }
110 \sys_if_engine_pdftex:T
111  {
112   \sys_if_output_pdf:T
113   {
114     \cs_set_protected:Npn \tag_spacechar_off:
115   }

```

```
116          \pdfinterwordspaceoff
117      }
118  \cs_set_protected:Npn \tag_spacechar_on:
119  {
120      \pdfinterwordspaceon
121  }
122 }
123 }
```

124 ⟨/package⟩

(End of definition for `\_tag_fakespace:`, `\tag_spacechar_on:`, and `\tag_spacechar_off:`. These functions are documented on page ??.)
